## WORLD TRADE ON MEAT

It is impossible to estimate with any degree of accuracy the number of cattle, sheep and pigs in the world, because in many areas the figures are either incomplete or entirely lacking. At a rough estimate, says the summary on "Meat" just issued by the Imperial Economic Committee, jes we have or making mistakes, even Demonstration Camp at Angus over Scout Fireman's Proficiency Badge. the total number of cattle may be in the worst of us do fairly well. the region of 600 millions, of which about two-fifths are in the British Empire; sheep may number about 750 millions, with between one-third to two fifths in the Empire, and pigs not quite 300 millions, of which not more. than 5 per cent are in Empire countries. In countries with reliable data card at the ball game and neither Basil Partridge, an Algonquin Park Toronto Troop. ### Acidity Tests Being Offered

Harrow.-The Dominion Experimental Station at Harrow offers its services, upon request, in conducting soil acidity tests to determine whether application of lime is required, and the amount necessary.

"When the question of liming arises, the first step should be a soil acidity test," official bulletin of the station advises. "An active-acidity test together with a knowledge of crop requirements as to soil type and acidity will determine to a large degree the suitability of soils for

various crops." Such a test will indicate quite definitely whether lime is required. Where lime is needed, the quantity required to reduce the acidity of a particular soil to a suitable point for a specific crop can be determined. This is one of the services rendered by the Dominion Experimental Station, here, upon request.
