It is a case of giving attention in time, if buildings are to last. Every act of neglect may mean a loss later of many dollars in the value of the

Labor-saving Devices Used Even In Old Spinning Wheel Days

London, Ont .- Labor-saving devices were the rage even in the days when an old spinning wheel was to be found in every home. Professor Fred Landon, University of Western Ontario librarian has discovered.

The library has just been presented with an old spinning wheel that had a device on it to save a lot of work on the part of the person doing the spinning.

It is known as a swinging spinning wheel. Instead of walking back and forth with the yarn, the spinner sits still, and lets the wheel swing toward him, and back again. The relic was presented to the library by the Lobo union school picnic committee, after it had been repaired and reconstructed by J. E.

Byeraft of Ilderton. Mrs. Bycraft also presented the university with a flax holder of a flax spinning wheel. In the holder was some flax prepared for spinning more than half a century ago, by Catherine Hampton, Mrs. Byeraft's grandmother.
