### Fertilizing Alfalfa Shows Results

Interesting Tests Reported by Department of Agriculture

According to recent statistics alfalfa occupies approximately 23 per cent of the hay land of the county of Norfolk. It is a general benefactor in that alfalfa adds to the organic matter of the soil and by virtue of its roots gathers a very large amount of nitrogen. However, it draws heavily upon the lime, potash and phosphate of the soil, hence the necessity of care to keep up the supplies of these ele-

During recent years, the local Dcpartment of Agriculture in co-operation with the Department of Chemistry, Ontario Agricultural College, has carried out some interesting tests of top-dressing alfalfa with complete and incomplete fertilizers. The average of 4 crops shows a yield of 10,440 lbs, green hay per acre where no fertilizer was applied; 11,786 lbs. where 2-12-6 was applied; 16,520 where O-12-15 was applied. The applications were made at the rate of 375 lbs. per acre, hence the gain of 5 080 lbs. green alfalfa hay resulting from the application of O-12-15 was made at a cost of approximately

A point of special interest is that the result of the fertilizer applied to alfalfa was not exhausted the year it was applied. We have definite records on file both from Norfolk County and elsewhere which shows that results of fertilizing alfalfa have shown up very definitely two and three years after the application was made. This, of course is an added profit.

During 1935 two interesting tests were conducted comparing O-12-10, 2-12-10 and no fertilizer applied at the rate of 375 lbs. per acre. These were on the farms of Messrs. V. J. Morrison, Nixon and C. Fleming, Simcoe. The average yields were:

No fertilizer, 15,840 lbs. green alfalfa per acre; O-12-10, 19,520 lbs. green alfalfa per acre; 2-12-10, 19,040 lbs. green alfalfa per acre.

This bears out the general experience of the Dept of Chemistry really suffering? throughout the province where the eral fertilizers carrying phosphate and I wish you could see how miserand potash increase alfalfa yields ap- able they are. proximately 35 per cent. Complete fertilizers carrying nitrogen in addition to the minerals increase alfalfa to about 25 per cent.

The best time of application of fertilizer to alfalfa is not an entirely honor and cherish this woman? settled question. In Michigan excellent results have been obtained from form says, I subscribe to it. top-dressing alfalfa in the fall. The Ontario work has been done largely in the spring. It would appear that either time the addition of minerals to this valuable crop can be made at considerable profit, as has already been pointed out.

Those living in the neighborhood of the tests mentioned would do well to examine the test blocks next year where undoubtedly there will still be valuable evidence in increases.

Should Have Adequate Record Of All Cash Transactions

Methods of recording financial statements relating to the farm are dealt with in detail by W. F. Chown, Accountant s Examiner, Economic Branch, Dominion Department of Agriculture, in the September quarterly issue of the Economic Analyst. An adequate record of cash transactions is a necessity in the preparation of the Income and Expenditure statement. For this purpose, says Mr. Chown, it is highly desirable to cultivate the habit of securing a voucher for each transaction at the time if takes place. These should be fyled in some orderly fashion. Statements and account sales rendered by companies to whom products are sold or shipped and invoices for purchases are good vouchers. A receipt should be given when money is received and the particulars entered on the stub. When payments are made by cheque the stub should be completed. Failing the foregoing, pencilled memoranda are useful and a pad and pencil in the barn or the time-honored kitchen calendar have their place in building up an adequate record but do not in themselves make up that record. From these original records, the cash book should be written up as frequently and regularly as possible by the farmer, his wife, son or daughter. For farms operated by managers.

farmers' clubs. co-operatives, and those individual farmers who are anxious to keep exact records, a columnar cash book is recommended. A columnar book may be purchased with the de ired number of columns, or an ordinary notebook may be ruled as required. The purpose of such a book is to classify receipts and payments into whatever groupings are desired. Fuller details and illustrations of the columnar cash book are given in the article.

"Reason, as every school girl now informs us, may be only the technique of rationalizing desire." - Will

## Don't Guess But Know

Whether the "Pain" Remedy You Use is SAFE?

Don't Entrust Your Own or Your Family's Well - Being to Unknown Preparations

THE person to ask whether the preparation you or your family are taking for the relief of headaches is SAFE to use regularly is your family doctor. Ask him particularly about "ASPIRIN."

He will tell you that before the discovery of "Aspirin" most "pain" remedies were advised against by physicians as bad for the stomach and, often, for the heart. Which is food for thought if you seek quick, safe relief.

Scientists rate "Aspirin" among the fastest methods yet discovered for the relief of headaches and the pains heumatism, neuritis and neuralgia. And the experience of millions of users has proved it safe for the average person to use regularly. In your own interest remember this.

"Aspirin" Tablets are made in Canada. "Aspirin" is the registered trade-mark of the Bayer Company, Limited. Look for the name Bayer in the form of a cross on every tablet.
