**Rural Education** (By Elsie C. Boulter, in the Maritime Farmer). Rural education is a subject which at the present time is receiving more and more attention. To the farming population, the present system as applied in the rural schools, is something with which the average farmer

Kilmer.

in not satisfied but which he feels powerless to remedy. Has it ever occurred to any of us that rural education mit ht mean a full satisfactory training for a contented life in rural surroundings, with a spirit trained to reach out to a knowledge of international affair.

Children in the rural schools need training in leadership, public speaking, social science, farm and home management, the ethics of co-operation, sad most of all, a love for all beautiful things. Can you imagine just what it would mean if every child be taught to give full value to all the worthwhile things in his community? If he could be instilled with a great We haven't the slightest idea who the should be 15 inches wide, 18 inches conditions? In short, if he or she

cities only to become part of a great machine, drudging in hot factories until all initative has been sapped. Just hate to wear a new suit. why did they leave home where they might have been much happier? Life was too dull; their communities had no real, live interests; the people were discontented and the bright lights

Why do so many farmers feel inferior and are looked upon as in fer-filled with water. for when placed side by side with a successful professional man. The answer is fairly simple. The farmer, as a boy, was not taught to value the worthwhile things of the country and he did not have opportunities to cultivate the social graces, which smooth the pathway when dealing with one's fellowman.

The Danes have set an example which farmers in many parts of the world are anxious to follow. The farmers in Denmark, at one time, were practically slaves, but gradually, by working upon the principles of co-operation they have evolved a system whereby they now operate their own mills, factories, bakeries, creameries, banks, etc. It is said there are ten thousand co-operative again. societies in Denmark and the average farmer belongs to five! The Danes I'm not the little financial sucker I under investigation by the Division Japanese flour is reported competare great students, ignorance being used to be. an unpardonable sin, and they believe the farmer should be as wel' informed as the business of professional

### Check Spread of Animal Diseases

Burn Carcasses of Animals Which Die of Infectious Diseases

The Ottawa Farm Journal has repeatedly called attention to the necessity of burning or burying deeply the carcasses of all farm animals which die of any infectious disease, or from some unknown cause. It is a comparatively common thing to see a carcass lying unburied in an old sand pit, or in some back lot on the farm. To these carcasses go dogs, and crows, and by this means germs of many malignant diseases are spread. To such a source may be traced many an outbreak of au-
