Canada a War Prize

ates this country from the immediate rived at the point where it will have scene of European war scares, there to be dealt with in a similar way. taken on their behalf. Three bridges regions. of Canada would tempt a predatory aminer. enemy. If this were a poor country it would be safer, but being one of could not be overlooked by nations one may kill the goose which lays more obvious method of piling they were worn away because of the overcrowded by domestic population the golden egg.

Advertising Canada Canadian Trave! Bureau at Ottawa, of \$671,726, or 15.9 per cent. of is an energetic sort of a cuss and it the total ordinary revenue, \$4,206,is, consequently, no surprise to learn that, in his efforts to gain Canada favorable publicity throughout the United States as a Paradise for tourists, he has been successful in interesting the management of the Crowell Publishing Company, publishers of the American Magazine, Collier's Weekly and other well known periodicals, to such an extent that they are sending ten of their editorial writers, including Walter Davenport, "one of the greatest reporters in America," to cover Canada from coast to coast during the coming Summer and write articles on this country.

In addition, Rex Beach, the novelist and sportsman, has been engaged by the Cosmopolitan Magazine to write a series of articles on Canadian resorts for that magazine .-Brockville Recorder.

Two Good "Sooites"

One of the best publicity agents at the present time not only for Algama but for the whole of Northern Ontario is Uriah McFadden, of Chatbam, who never loses an opportunity to tell of the resources and oppor tunities for development that this vast territory affords. This former Socite, who since his

removel to Chatham has become favorite speaker in that part of the country, has a wide knowledge of Northern Ontario and, as his speech to the Masons of Chatham recently shows, is able to present it in illuminating and entertaining fashion. When another former Socite, Sir William Hearst, later Prime Minister of the province, became Minister o' Lands and Forests, he, like the judge, eagerly seized every chance to sing the wonders of the territory from which he came. Indeed this proclivity, taken in conjunction with his well-known temperance principles, made the theme of a song which was given with great effect at a Toronto newspaper dinner at which Sir William was a guest. It went

something like this: Whats the matter with William? William Howard Hearst? What's the matter with William? There's nothing but his thirst. William thirsts to sally forth And rave and rave of the wonderful

north--What's the matter with Wilham? There's nothing but his thirst. Sir William did a great work in

making the north known to the rest of the province, and Judge McFadden, who is afflicted with much the same thirst, is doing us a great service today .- Sault Ste. Marie Star.

The business of farming is yearly becoming more and more dependent upon facts that have been gathered regarding livestock and livestock management, crop production, soil management, disease and insect control and business organizations of the farming industry. Individual problems involving one or more of these, and many other phases of agriculture engage the attention of Ontario farmers from day to day. During the winter months there is a little more time for study of the most acute prob-

Through this column farmers may secure the latest information pertaining to their difficulties. To introduce this service Professor Bell has prepared the following typical problems to indicate the information which should be given in order that a satisfactory answer can be made.

If answer is desired by letter enclose stamped and addressed envelope for reply. Address all inquiries to Professor Henry G. Bell, Room 421, 73 Adelaide St. W., Toronto Ontario.

Question - How would you fight the Cabbage or Onion Maggot?

Answer - I suppose what is meant is what is the best way to fight both of these insects. Against the cabbage maggot, the best thing to use is corrosive sublimate at the strength of 1 ounce to 10 gals, of water. The poison is dissolved by putting it first into a little water, just enough to nicely cover it when it is all crushed, then add more water and stir well. If all is not yet dissolved, add a little more water and continue stirring until it is dissolved. It will dissolve much quicker in hot water if this is convenient. After dissolving add the necessary amount of water to bring it up to the above proportion of 1 ounce to 10 gallons. This liquid should be made up and kept in wooden vessels as it corrodes metals if it is left in them for any appreciable length of time. It should be applied at the rate of from one.
