

# Education Offer Girls a Square Deal?

The past week I have put question to two classes of girls whose average age is a half year. My first question was: Where do you hope to go to school today? In every answer was: In the Collegiate High School of Collegiate second question was: Why do you want to go to school? Answers varied, but were alike: Every girl has an ambition to achieve economic independence. One is going to be a doctor, a teacher, a third a stenographer, a fourth a stenographer, a fifth a sixth a private secretary, a seventh a music teacher, an eighth a newspaper woman, and a ninth a stenographer.

Asked to say these were worthy ambitions but that in 20 years at least the 40 in the class would be first smiles and laughs on the part of nearly all. Gradual change of countenance, thoughtful realization so different from that of their classmates.

Asked: How do you want to spend your money? Most of the young girls, like young boys, have dream of some extent, but some come true and their vision of earth. No doubt among them I questioned them and nurses and stenographers and even the bright-eyed girl with the fine forehead and blue eyes, who came a doctor and minister. But the bald fact is, unless all past experience is to be followed, girls will be married by the age of 20.

Systems of education, and systems of secondary education, which are in fact squarely in parents realize its immense value, but we ought to realize its value as a biological, functional, and aesthetic different men and women and the majority of women-makers and mothers? At a moment suggesting to any profession or to shut against women, suggesting that girls should in a special school. I wish women to freedom to enter any which their talents. But the number of those professional women, except for short very insignificant proportion.

In fact, do our systems give the girls, the girls and mothers, the there some unique power which comes from Latin, French, algebra, chemistry and trigonometry and perceiving as no other studies that women in their equality and some of their innate differences. Insist on the same given to men being who will lose some admitting those differences.

That either of these correct. Rather I believed into our acceptance of illogical situation, standards were set. We have passed them as a suitable for boys and girls. We question their for boys or girls enter who wish to enter.

Why continue our curriculum something more and then there is out of a better education of my 80 girls have chosen to be mothers of children. Some have chosen to go to attend by boys to shoulder with in literature, and mathematical and.

time is coming to get special instruction, art, household labor, dress, hygiene and other subjects upon their vocation. And may I plead and all parents to frank and matterward both boys and in their future.

percentage of them are or members of learned professions. They are not a themselves for professional to school to learn to conduct themselves.

usually honest, above temptation.

# HAVE YOU HEARD

A man says he always takes his wife to town when he wants to buy himself a new suit. He knows who to go to.

Father—What's that young man's intentions, daughter?  
Daughter—Don't know, Daddy Dear. He is keeping me pretty much in the dark.

A career should be "up" to you—not down.

Political Speaker—I'm pleased to see such a dense crowd here tonight.  
Voice—Don't be so pleased. We ain't all dense.

Most men buy a seat in the chair car so they can have something to set their bags on while they are in the smoking compartment.

Judge—I award the eight-day clock to the plaintiff.  
Defendant—And what do I get?  
Judge—You get the eight days.

In order to cater to an intelligent public one must have a small supply on hand himself.

Hubby—If you don't stop nagging I'm going to tell you a few things.  
Wife—You might begin by telling me why you called me "Baby" in your sleep last night.

If we like his ideas he is a man of vision.  
If we do not he is a dreamer of pipe dreams.

His Wife—You told an awful fib to the doctor when he asked you what you had been eating.  
Man—I know what I was eating. If I had told him I had been eating porterhouse steak and mushrooms he would have charged me accordingly.

"Brunettes make the best wives," asserts a psychologist. In these scientific days they also make very good blondes.

Now that the scientific sharp minds have invented an apparatus so delicate that they can measure a maiden's blush, where are they going to find the blush?

The best way to starve to death would be to start a lot of shops where the girls could be made useful instead of beautiful.

Friend—And so you have a sweetheart in every port?  
Sailor—Yes—I got 400 ports, too.  
Friend—Say, you're not a sailor, you're a wholesaler.

There is some doubt whether 1936 will be a bigger and better year, but it is certain to be a noisier one.

A farmer, paying his first visit to the seashore, asked a boatman if he could buy some of the water to take home to show his wife. The boatman assented and charged the farmer a quarter. A few hours later the visitor returned to the shore. By now the tide had gone out, and the man gazed open-mouthed at the spectacle.  
"By cracky, mister," he said, "you've certainly done a big business today."

Judith—My sweetheart has just lost all his money.  
Edith—Lion't you feel very sorry for him?  
Judith—I surely do. How he will miss me!

The human race may be compared to mushrooms, most of it is mushrooms but there are a lot of toadstools mixed in.

Bookkeeper—The new stenographer's hair is a decided blonde, isn't it?  
Boss—Yes, though I did notice a slight indication around the roots.

Willing Captive  
She was "led" to the altar—  
But some made this crack:  
That she didn't falter  
Or try to hang back.

# FREE Trial Bottle of KRUSCHEN

GET YOURS NOW  
Ask your druggist for a 75c Kruschen Giant Package. It contains a regular bottle and a trial size bottle. Use the trial size first and if not satisfied return the regular bottle unopened. Your money will be cheerfully refunded.

## Youth And Music

The way to have a musical people is to have people make music. A good deal is talked about the educational effect of listening to radio and phonographic records, and there is something in it (albeit most for those who know music already), but to make an actor you do not sit and watch plays.

In Springfield the hotels are full of especially appetizing guests. Who should they be but 600 boys and girls musicians in the orchestras and bands from High schools in New England towns and cities? And all rehearsing like a house afire for the festival on Saturday afternoon. The public schools are the life-savers of American music from the drowning of too much passive listening to radio and the asphyxiation of vulgarian jazz. Here children are taught to know the noble music from rubbish that is often filthy and vile, and being taught to love the good. As for their rehearsal and concerts here in this room is nothing but the most wholehearted envy of their good time, for if anything has ever been found that is more fun for a musical child than a Spring Festival of amateur players no one knows what it is.

A family party at the villa of Dr. Jean Sibelius in Finland, was debating this question—whether passive listening to radio and phonograph will sterilize music-making. One of the composer's daughters, a pianist, said, "I like both preserved fruit and fresh fruit. Each has its distinctive flavor." But her father spoke as composer and with austerity.  
"The dilettant will continue to listen to machines and the great talents will continue to create."

During the last 10 years, the population of Southwark, London, Eng., has decreased by 22,764.

MRS. SMALL

# Has Cure Of Cancer Been Discovered?

Instances Cited as Proof of Serum's Results. — Hopeless Cases are Aided.

Dr. J. E. Hett, of 607 Sherbourne St., Toronto, and 223 King Street E., Kitchener, Ontario, who has been interested in cancer since his graduation in medicine from the University of Toronto, in 1891, has devoted nearly all of his spare time to research work and intensive study of this great problem.

He toured Europe on different occasions and visited the laboratories and cancer clinics in London, Paris, Berlin, Heidelberg, Vienna, Prague, Padua, Bologna and Rome.

For years in his own laboratory in Kitchener he worked away quietly, taking no time off for sports or other diversions but devoting every spare moment, after the hard day's work at his profession of medicine and surgery, to his cancer research.

"The dilettant will continue to listen to machines and the great talents will continue to create."

number of cases that have been cured one, two, three and four years who had been given but a few months or weeks to live," he told the Telegram. "And the remarkable part of it is that these patients have kept well and added more weight than a year ago, and are carrying on their usual occupations, some of them the heavy burdens that fall on farmers' wives."

"There was no selection of these cases and a large percentage of them were looked on as hopeless, and the only thing that could be done for them was the administration of morphine to relieve their pain. I am no longer experimenting; that stage of the treatment was passed four years ago. I am now obtaining results such as have never been obtained before anywhere," he says.

Remarkable Results  
During the past four years Dr. Hett has carefully watched each patient, and has acquired considerable new knowledge. The subject of cancer is still a very great problem, and there are different forms of malignancy. Some cases are slow in growth—and others very rapid. His serum gives a definite reaction, when first administered, and during all the times he has used it not a single accident has happened to a patient, and he has treated some with very high blood pressure; in others, a very low blood pressure with heart disease and other complications. He has discovered that where cancers are slow growing, he cannot obtain a high degree of reaction, whilst with those of rapid growth the reaction is very strong.

Some of these patients are living in Toronto and others outside. The Telegram last year, and early this year had the opportunity of seeing several of them, and recently checked up on their progress following the apparent cure. Records recently made show remarkable gains in weight and added strength by some; and the others continue in good health.

Curability of Cancer  
In 1927 the Department of Health of Detroit established a cancer division as a registry of the cancer cases treated in all the Detroit hospitals. The attempt has been made to follow the cases treated there surgically or otherwise in 1927, '28, '29, for five years. No case was included unless the pathological diagnosis was recorded, but the attempt was made to include all cases treated in 13 hospitals. The result is an exhibition of the work in attempting to cure cancer in the hospitals of a large city.

The figures show the terrible mortality of the disease, despite all that has been accomplished to date by surgery or radium or other treatment.

Organ	Total Living at end of five yrs.
Stomach	356
Intestine	90
Rectum	86
Uterus	178
Breast	385

**Dr. Hett's Success**  
A comparison of these records with the records that Dr. Hett has at this time would certainly give the medical profession an idea of the remarkable results obtained in the treatment of the disease similarly located by Dr. Hett with his serum.

The records were examined by the Telegram, and they are available to members of the medical profession who desire to examine them.

The doctor says he realizes the many difficulties which can arise before the medical world can be convinced. A number of local medical men who have attended his clinic and examined his records have declared themselves convinced that his proof is ample, but he declares some time must elapse before he lays his cards all on the table. Four years ago, when he had only a few patients to show, he was urged to announce what he had, but he declined on the grounds that it would be unwise to create any false hope if such should be the case.

"Time is always needed and essential to prove permanency of results," he says, "but I can now say that my studies and observations of many patients prove to me beyond the shadow of doubt that permanency will be proven."

Dr. Hett is not opposed to surgery, X-rays and radium. He claims these will have their places, but a very large number of patients are not amenable to these treatments or have failed to respond to them. Whilst he has been successful in advanced cases of cancer, he has also been successful in cases of sarcoma. He believes also that his serum will prevent cancer, but he has not given it in a single case for the reason that it would be impossible to absolutely prove it. He states that the time will certainly come when people will be immunized against cancer, but that will not come until the profession will recognize that the cure of cancer has been discovered.

Dr. Hett was the first physician in the world to treat an internal fibroid growth by X-rays. He obtained a complete cure and published his results in the Journal of Advanced Therapeutics in September, 1904. He discontinued X-rays since then, as he did not get any results with X-rays in cancer.

Dr. Hett takes no holidays and he works seven days a week. He is at present travelling some 800 miles a week, covering the province westerly as far as Windsor, in an endeavor to meet the demands of patients who are unable to come to Toronto. He declares the strain is a heavy one for a man of his age."

So, with all respect and in all humility I make bold to suggest a reconstruction plan for Minto. It has no connection of any sort with a political reconstruction such as Mr. Stevens advocated in the recent election. Nor is it of a sort such as the five-year plan imposed on the Russian farmers by their governmental dictators. Rather it is the sort of economic reconstruction accomplished by Denmark largely through a sensible scheme of adult education. The agency, which, in my opinion, could give such a forward movement is the Minto Agricultural Society.

A few weeks ago the Society (called the West Wellington Society), held its 73rd annual Fall Fair. That means that the first fair was held in 1863. I believe the time has come when there should be a general social taking with regard to all our Agricultural Societies and other government supported rural organizations and institutions to find out not only "where they are at" but also at what place they aim to arrive.

Nobody denies the value of the Harrison Fall Fair or any other Fall Fair as a happy social get-together. From the standpoint of encouraging and perpetuating the spirit of neighborliness the Fall Fair is well worthwhile. Indeed there should be more of such gatherings. But from the standpoint of advancing the economic well being of Minto Township there can hardly be the same opinion about the value of the Society's work.

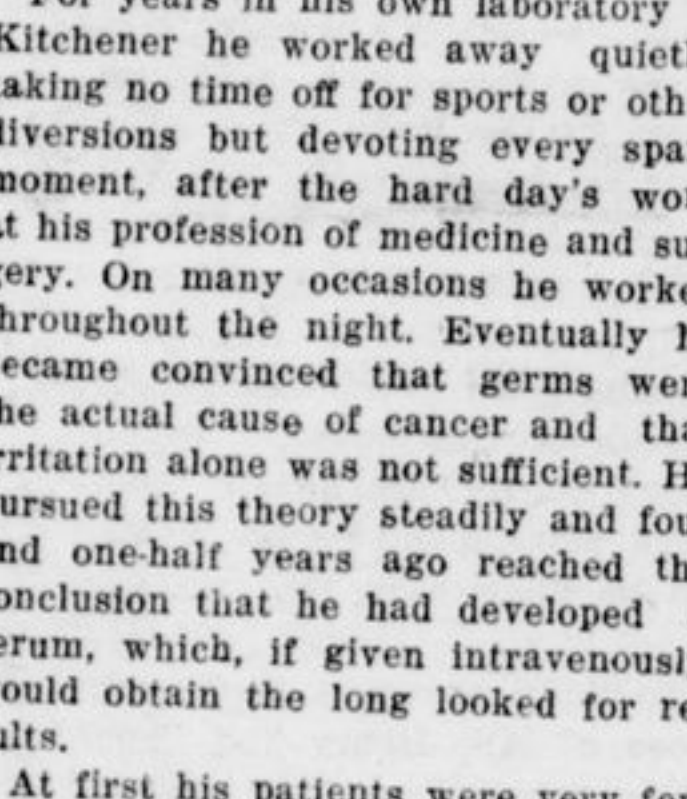

For the tasks we are facing should not our Agricultural Societies modernize themselves and put themselves at the task of re-directing and reconstructing Ontario Agriculture? The Minto Agricultural Society has had a long and honorable career. It is the only organization in the Township, apart from the Township Council, that is all inclusive of the population, and continuous in its operation. Its purposes are unselfish. Its aim is the public good. Its leadership is established and accepted. My suggestion is that the Society should broaden its services beyond the Fall Fair idea and become a Minto Agricultural and Development (or Reconstruction) Society. During the War the Ontario Government had an Organization of Resources Committee to promote food production and other war-time needs. It is something like this for the new era that Minto faces that I have in mind; bringing about a union of all the Township's forces so that it may attain to its full possibilities. So that none of its resources be unorganized.

Should such a proposal find favorable consideration one of the first duties of the Society would be to "take stock." If possible, the actual and real benefits, not the imaginary and supposed benefits, derived from the Fall Fair should be honestly estimated. There should be a constructive consideration of the really constructive value of cash prizes for most of the competitions. Mr. Whaley told

and that it is his hope that the time will soon come that it is generally recognized that he has discovered the treatment for cancer for which the whole world has been looking.

Dr. Hett believes this is the most spectacular case recorded. Not only because of the recovery after being so near to death but also because of the breaking off of the habit of taking so much of morphine each day. Dr. Hett believes that no record can be found in any medical journal or other publication of a case that apparently was as hopeless as this and a recovery made.

Dr. Hett is well up in years and recognizes the fact that the time is short for the carrying on of his work. He states that he does not want more patients than he can properly treat

## ASK YOUR DOCTOR FIRST, MOTHER

Before You Give Your Child an Unknown Remedy to Take  
Every day, unthinkingly, mothers take the advice of unqualified persons instead of their doctors—on remedies for their children.  
If they knew what the scientists know, they would *never* take this chance.

Doctors Say PHILLIPS' For Your Child  
When it comes to the frequently-used "milk of magnesia," doctors, for over 50 years, have said "PHILLIPS' Milk of Magnesia—the safe remedy for your child."

Remember this—And Always Say "PHILLIPS" When You Buy Your child deserves it for your own peace of mind, see that you get it—Genuine PHILLIPS' Milk of Magnesia.

Also in Tablet Form:  
Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Each tiny tablet is the equivalent of one teaspoonful of Genuine Phillips' Milk of Magnesia.

**PHILLIPS' Milk of Magnesia**  
MADE IN CANADA

**TO STOP ITCHING AND TO CLEAR UP ECZEMA AND SKIN RASHES—USE D.D.D.**

Dr. D. D. Dennis' Liquid Prescription, made and warranted by the makers of Campana's Italian Balm. Trial bottle 35c at your druggist. 24

## Catarrhal Deafness May Be Overcome

If you have catarrhal deafness or head noises go to your druggist and get 1 oz. of Parment (double strength) and add to it ¼ pint of hot water and a little sugar. Take 1 tablespoonful four times a day.  
This will often bring quick relief from the distressing head noises. Clogged nostrils should open, breathing become easy and the mucous stop dropping into the throat. It is easy to prepare, costs little and is pleasant to take. Anyone who has catarrhal deafness or head noises should give this prescription a trial.

## WAKE UP YOUR LIVER BILE—

And You'll Jump Out of Bed in the Morning Rarin' to Go  
The liver should pour out two pounds of bile into your bowels daily. If this bile is not flowing freely, your bowels don't digest. It just decays in the bowels. Gas floats up your stomach. You get constipated. Harmful poisons go into the body, and you feel sour, sunk and the world looks punk.  
A mere bowel movement doesn't always get at the cause. You need something that works on the liver as well. It takes to get these two Carters' Little Liver Pills to get those two pounds of bile flowing freely and make you feel "up and up." Harmless and gentle, they make the bile flow freely. They do the work of colonic but have no calomel or mercury in them. Ask for Carters' Little Liver Pills by name! Stubbornly refuse anything else. 5c.

## A Reconstruction Plan for Minto

By Prof. S. B. McCready

Editor's Note: This is the conclusion of a series of ten articles which were published recently in the Harrison "Review." While written specially for the "Review" and addressed to residents of Minto Township particularly, we believe they have been found interesting to many of the readers of this paper because the problems of the farm folk of Minto Township are the same problems that confront rural people throughout the province.

So, with all respect and in all humility I make bold to suggest a reconstruction plan for Minto. It has no connection of any sort with a political reconstruction such as Mr. Stevens advocated in the recent election. Nor is it of a sort such as the five-year plan imposed on the Russian farmers by their governmental dictators. Rather it is the sort of economic reconstruction accomplished by Denmark largely through a sensible scheme of adult education. The agency, which, in my opinion, could give such a forward movement is the Minto Agricultural Society.
