HE DARE NOT MOVE IN BED

Nights Were Torture Through Lumbago

Only those who have suffered from umbago know how exceedingly painful it can be. And when they discover a remedy for this complaint, they are other sufferers. Let this man tell you

"I had a bad attack of lumbago When I got into bed I had to stay in that position-I could not move for pain. I didn't know what to take or what to do. I was advised to try Kruschen Salts and I am very grateful I did so. After taking a few doses I felt relief, and after taking one large bottle, I am glad to say that my lumbago had entirely gone, and I have not had the slightest trace of it coming back."-G. A. V.

Kruschen is a combination of numerous mineral salts which assist in stimulating your liver and kidneys to healthy, regular activity. They ensure internal cleanliness, and so help to keep the blood-stream pure.

Poultry Worth Many Millions to Canada

1936 Figures Set Value of Ontario Farm Products at \$18,078,000

OTTAWA. - Only a few years | right if a man is willing to scratch ago, figures relating to the statistics of poultry in Canada occasioned very little interest and were dismissed with a fleeting glance. Now that the poultry industry throughout the Dominion has developed into one of the big undertakings in the field of agriculture, these figures arrest the attention, revealing as they do the enormous growth of an industry which directly or indirectly affects practically every Canadian home. Apart from the impressive figures dealing with the trade and commerce side of the industry, the following figures which relate only to the numbers and values of Canadian farm poultry are sufficient to give an idea of the development of the industry. In 1936, Canadian farm poultry was valued at over \$40,000,000.

The total numbers and values of poultry on Canadian farms in 1936 (with comparative figures for 1935 within brackets are estimated as follows hens and chickens 55,717,-000, \$35,018,000 (53,062,900, \$34,-570,000; turkeys, 2,039,900, \$3,-617,000 (2,066,200, \$3,882,000); geese, 859,000, \$1,169,000 (918,-100, \$1,363,000); ducks, 6822,000, \$547,000 (721,600, \$577,000); total poultry 59,289,200, \$40,351,-

060 (56,768,000, \$40,292,000). By provinces, the total value of all farm poultry are estimated as follows, with the 1935 figures within brackets; Prince Edward Island, \$646,000 (\$655,000); Nova Scotia, \$990,000 (\$770,000; New Brunswick, \$1,122, (\$1,028,000); Quebec, \$5,376,000 (\$5,483,000); Ontario, \$18,078,000 (\$17,863,000); Manitoba, \$2,987,000 (\$2,836,000); Saskatchewan, \$5,026,000 (\$5,299,-000); Alberta \$3,358,000 (\$3,596,-000 and British Columbia, \$2,768,-000 (\$2,402,999).

Crops Without Soil

The Grower Can Operate By Means of "Hydroponics"

Back in 1859 a German agricultural chemist, Knop, decided that he would add to water chemicals from the soil that plants need and then grow plants in the water without soil. Long before he appeared on the scene lilies and other flowers had thus been grown. But Knop, being a scientist, wanted to study just how stems, leaves and flowers develop-just what they take out of the soil. Though the soil scientists did not follow in his footsteps the blant physiologists did. In their greenhouses, pots of water in which all kinds of vegetation grows are

sure to be found. Some years ago it occurred to Dr. W. F. Gericke of the University of Califernia that this old idea had commercial possibilities. So he wrote a paper for the American Journal of Botany on "Agriculture, a Means of Crop Production" and started the ball rolling. More crops could be grown on a square foot of nutrient water than on a square foot of soil, was his point.

In Science, Dr. Gericke now tells the world that in the late Summer of 193 a number of large growers of certain vegetables and flowers

WAKE UP YOUR

Flush Kidneys of Waste Matter, Poisons and Acid and Stop Getting Up Nights

40 CENTS PROVES IT

When your kidneys are clogged and your bladder is irritated and passage scanty and often smarts and burns, you need Gold Medal Haarlem Oil Capsules, a fine harmless stimulant and diuretic that always works and costs but 40 cents at any modern drug

It's one good, safe way to put healthy activity into kidneys and bladder -you'll sleep sound the whole night thru. But be sure and get GOLD MEDAL - right from Haarlem in Holland-you are assured of results. Other symptoms of weak kidneys and irritated bladder are backache, puffy eyes, leg cramps, moist palms.

GARDENING

By GCRDON L. SMITH

ARTICLE NO. 6

All experienced gardeners warn against working soil too early. With clay, it is especially dangerous to dig when there is too much moisture in the ground. Such soil is liable to puddle, and when drying out it may bake. In any case there is no advantage, and the work would have to be done over again later on. A good safe rule is to squeeze a handful of earth in the hand. If it compacts into a pall, the enthusiast is well advised to go back and read a book for a few days. On the other hand, if the soil simply crumbles when released by the hand it is fit for working.

SWEET SCENTED FLOWERS

Flower growers are rediscovering the charm of fragrance. For a long period, color schemes and changing styles of design have commanded so much attention that the old art of planting for scent was almost for-

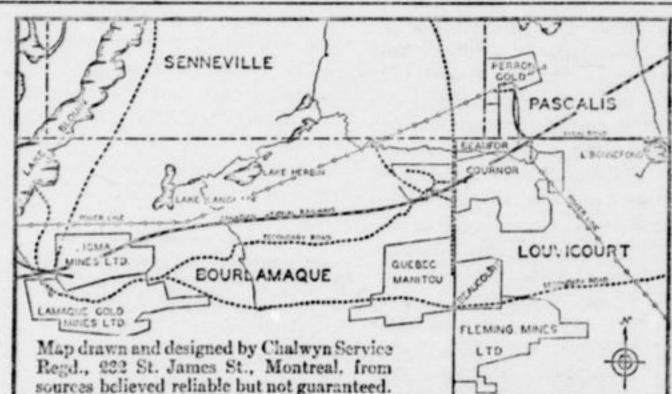

the nose is competing with the eye in making final decisions on candidates for Spring plantin. The gardener who would be up-to-date must become acquainted with the plants to grow for fragrance.

For the same reason, perhaps, I

that the sense of smell is accentuated in the blind, we become more more conscious of garden fragrance when the brilliant light of the Summer day fades, and twilight makes of the garden a fairyland. Some flowers whose perfume is not detected in the daylight become fragrant at night. Others give off at night a perfume different from their daytime scent.

EARLY PLANTINGS

ing music lessons, and the other day the first of the garden peas will be among the earliest vegetables sown. These may be planted as soon as the ground is fit to work. All of the first named seeds should be sown at least three times, at intervals of ten days so that there will be succession of vegetables. The second group to go in will be carrots, beets, onions, potatoes, etc., which can stand a little frost, and then beans, corn and tomato, cabbage and cauliflower plants, etc., which kill with frost, and finally those hot weather With the trend changing, however, | vegetables like lima beans, squash well started, egg and pepper plants, cucumbers, meions and similar things. All garden rules, it should be remembered, however, are only approximate and should be varied a little to suit the local climate and individual preference.

Cattle Rustling Streamlined Today

Thieves Ingenious In Meeting Modern Conditions-Use Trucks For Speedy Work.

Cattle stealing during the last decade has attained a volume never previously registered.. The use of the motor truck and automobile has increased the returns of cattle rustling many fold.

Before the period of motor transportation thieves were able to steal relatively few cattle at a time and were forced to escape into inaccessible hideouts. Today, writes Edward N. Wentworth, director, Armour's Livestock Bureau, in "Armour," with fast trucks to speed across the State lines, distant markets are readily available and each thief, or band of thieves, may operate in one county this week and another next

Not only are the ranges and isolated herds pillaged, but the bandits run their trucks into farm buildings by day, when the owner is in the field, at the neighbors, or in town, and boldly haul away veal calves, dairy cows, horses, pigs or sheep, Their control becomes a problem of the farmer as much as of the rancher, although the damage to the lat-

ter is much more extensive. SLAUGHTERED QUICKLY An important activity of the modern cow thief is butchering. Un der cover of darkness he captures and slaughters his animal, fully aware of its ownership, burns or destroys the hide, loads the meat into his rubber-tired vehicle, and whisks it away to peddle it in some remote construction, logging or mining camp, or in some small town

in the next State. On November 28, 1935, Harold Benson and Louis Speulda, ranch dwellers four miles north of Upton, Wyoming, were sentenced by Judge H. P. Ilsley of New Castle, Wyo., 48 hours after their arrest on charges of cattle killing. The two men pleaded guilty, Speulda getting one to two years at the State penitentiary and Benson, who was 22, getting an indefinite sentence at the

Boys Industrial School. Colorado seems to be a favorite locally for this type of activity, the various counties along the southern tier of the State averaging twentyfive to thirty cases of cattle theft on file each year. The cases are usually handled by the District Attorney at Durango. So successful has the incumbent District Attorney, James M. Noland, become that most defendants plead guilty.

Many cattle, however, are stolen monthly, two or three at a time, and they are promptly butchered. Thoughout last autumn ranchers and cowboys, authorized as deputy sheriffs, patroled the ranges, and in some cases acted as vigilantes. This has decreased stegling somewhat, but never stops it entirely.

Livestock detectives and inspectors recently trailed rustlers from Osage, Wyoming, to Omaha, Nebraska, but were unable to catch them. It appeared that they had transported eight head of cattle in a truck over 600 miles.

At Pryor, Montana, in 1933, ruswhere he had some weaning calves, ordinary seamen and coal passers. killed eighteen of them, skinned out and cut off the hindquarter, loaded them in a truck and drove away. The car was trailed seven miles by blood of the slaughtered animals then the trail disappeared on the main

BECAME QUITE BOLD The South Dakota Stock Growers Association for a long time offered a reward of \$500 for those who captured livestock thieves dead or alive. A few years ago the county attorney at Alamosa gave orders "to shoot to kill," in combatting some

HARPERS MALARTIC

Construction of the necessary camps at the Harpers Malartic Gold Mines, Limited, has commenced, and the company has let a contract for the cutting of a road to the property from the main road, a distance of approximately two miles. Following the erection of camps, and as soon as the snow goes, a diamond drilling program will be undertaken to prove up the continuity of favorable ore zones located on surface last fall.

HARPERS MALARTIC

particularly pernicious truck-using thieves. In two months more than five hundred head of lambs had been stolen from feeding pens in the San

Luis Valley, near by Alamos. Criminals were so bold in Bent county, Colorado, in 1932 that they took sixteen lambs from pens owned by the sheriff at Las Animas. In a period of two months convictions for livestock stealing were secured as follows. One in Arizona, one in New Mexico, three in Colorado, three in Wyoming, two in Nebraska, one in Montana, two each in North and South Dakota, two in Kansas and five in Texas.

A case in the latter State was interesting. A farmer surprised a group of thieves who had just butchered a shote. They hid in some brush on a nearby hill, watched the farmer scald, scrape and hang the carcass to cool, and then the thieves loaded the pork into a truck to make off with it. That they were captured and convicted was a tribute to the officers of the law and the farmer as well.

Says Irish in Canada

Not Canadian Enough Montreal .- A suggestion that Canada's Irish might "endeavor to be more Canadian," was made by Hon. C. G. Power, Minister of Pensions and National Health, in a speech here at the annual St. Patrick's Society ban-

"We have ar right to call ourselves Canadians: let us be proud of it and seek to regain the supremacy we once held in the public life of Canada,' the Federal minister said.

"Our people have not held the place in public life that their genius entitled them to, but I fear our generation and the one that is rising today are not assuming a fair share of the responsibility as citizens of this country."

The Influence Of Eugenic Air Bombs

A German Aviator Sers Acrial Warfare Improves Race

It has remained for Major Erich Suchsland of the German aviation corps to make the startling discovery that aerial warfare is good for the human race - improves the germ plasm. In the Archiv fuer Rassen und Gesellschaftbiologie he unfolds his notions and proves to his own satisfaction that bombs are eugenic manna falling from heaven. In the first place, reasons the major, bombs are dropped usually on crowded cities. The least desirable type of humanity lives in the slums, where the huddling is worst. By wiping out these underprivileged and undernourished the airman raids that particular community of an in-

After an air raid there is always much pillaging and disorder for which anti-fascists and other human vermin are responsible. There will be fighting for the spoils, with the certainty that many of the looters will be shot down. Again there is I cause for rejoicing.

By the time the bombers have retired the survivors in the community are in a state of terror. The major regards this as a test of stamina. The "jumpy" ones, the emotionaly and nervously unstable, will therefore reveal themselves. According to the major the productive capacity of these unfortunates is impaired, which causes him to throw up his cap and cheer.

Professor S. G. Levit, of the Maxim Gorky Medico-Genetical Institute, Moscow, takes the major in hand in a sharp letter published in the Eugenics Review pushes the argument to its extreme. If air warfare is a genetic purge, so is any act of barbarism, the professor points out. "Thus, for example, spikes in the bed tend to eliminate weak backs. And in this more general form, we fear, the major's thesis is after all not so very familiar, having been advanced by not a few of those unfortunates who have developed under specially comfortable (and hence really deplorable) con-

Wood Safer Than Steel

Like other countries which possess valuable forest industries, ladia has become impressed with the merits of wood as against other and hitherto more generally employed structural materials. Indeed, according to a recent statement, astounding as it may seem, the Forest Research Institute there is convinced that "Indian wood can give greater protection than steel and concrete even, in cases of fire."

Fire-proofed woods, claims the Institute, is safe than unprotected steel which gets hot very readily and loses its strength, with the result that in the case of steel beams the adjoining masonry walls come down. The high degree of insulation; the tendency of wood (especially in larger structural sizes) only to char outside; the almost complete absence of expansion when exposed to heat; and the facility with which wood members can be cut to allow rapid rescues; these are some of the advantages of wood construc-

The last few years have seen great progress in the science of fire-proofing wood. This achievement, coupled with recent improvements in the design of timber joints and the preservation of wood for an almost indefinite period against insects and funciis said to make it possible for fabricated timber structures to compete on more than equal terms with steel

Working To Music

and concrete structures.

Canon Gay's story of how he obtained better omelettes by providing his cook with a radio set in her kitchen might have drawn an appreciative chuckle from the late Archbishop Temple, father of the present Archbishov of York, who also used to tell a story of eggs and music, One morning in a country house where he was guest he heard from the servants' quarters a voice singing "Nearer, My God, To Thee," and reflected on the piety of the woman who went about her morning tasks to the strains of a noble hymn. At breakfast he commented on the singing to his hostess. "Oh, yes," said she, "that would be cook, That's the hymn she boils the eggs to-three verses for soft and five for hard .-

Over-Development of Emotions Drawback To Women Surgeons

Manchester Guardian.

Buffalo, N.Y .- Emotional over-development is the only thing that keeps women from outranking men as surgeons, Dr. M. Louise Hurrell, Rochester woman physician, told fellow

alumnae of Buffalo University. "One great cross we women physiclans have to bear is our over-sympathetic development," she said in an address before an alumnae association meeting.

"This, and not lack of definess of technique, keeps women from going
