GARDENING

By GORDON L. SMITH

can be greatly extended by using very | should make sure that the particular early, as well as late, types. In garden peas, for example, the time of maturity will vary from about 50 days to 75. Instead of planting only one variety it is advisable to include at l ast three. Early sowing is essential but in certain parts of the country a Fall crop with a quick-growing variety is also possible. In corn, the very early Bantam types mature weeks shead of the regular season and some of the late, both white and yellow kinds, are on until frost or even after.

READY-MADE GARDENS The gardener is advised for the quickest possible results, to purchase a certain quantity of started plants of both flowers and vegetables. These are usually purchased from the greenhouse, florist or seed house. It is im portant to get the varieties wanted, and on this account it is a splendid idea to consult a good Canadian seed catalogue before placing an order. The gardener can look over the various dually widened.

Possibly less conspicuous and even more durable are labels made of zinc. A sheet of zinc, purchased from the plumber, may be cut into strips of the desired label size. Satisfactory measurements for general use are six inches long by an inch and a quarter wide. A mixture of one liquid ounce of hydrochloric acid and one ounce of powdered antimony makes the writing solution. A sharppointed wooden skewer or sharpened hand twig is used for writing, the antimony being stirred into the acid when using. The fegend will turn black on both the zine and both writing and label last indefinitely through sun and storm.

Problem: Over 40

America's greatest problem is the sad plight of men and women over 40 who must eat but who cannot find work. This "too-old-at-40" fallacy is not only unjust to the unemployed but it is still more unjust to the employers as it automatically bars from American industry the best, fastest and most dependable workers, people whose creative and executive powers are just beginning to function at their best. - James Murphy, New York, (letter in New York Times).

By Frost Replaced | Largest Banks The World Over

The largest bank in the Englishspeaking world - probably in the world - is the Federal Reserve Bank of New York. Next in line is England's Midland Bank, then the Chase National of New York, and three others of London's big five: Barclay's, Lloyd's and Westminster.

Each year, the California Bank of Los Angeles compiles a ranking of the 150 largest banks in Englishspeaking countries based on deposit liabilities. The New York Reserve Bank stands we'll in the lead in this comparison with deposits of almost \$3,206.000,000. Only three other banks have totals of more than 2,-000,000,000, none of them within \$800 millions of the big New York

institution. Canadian banks stand very well in the list, with the Royal ranking 17tht and the Montreal a jump behind. It is of interest that the Canadian institutions are substantially larger than those in any of the other British Dominions or possessions. In all Canada has 10 "chartered" banks. Of those no less than eight are included in the 150 largest. Further, for good measure, the Bank of Canada appears in this year's list. Rannking of the other Canadian banks is as follows: Commerce, 24; Nova Scotia, 53; Imperial 107;

Among the flowers which can be purchased as started plants are the cosmos, zinnias, petunias, marigolds, salpiglossis, nicotine and a host of others. Cabbage, celery, tomato, head lettuce, egg an dpepper plants in the veetable line are all sold as started

those vegetables which give the biggest returns for the smallest space occupied. Among such kinds are beans carrots, onions, lettuce, swiss chard, spinach, cucumbers and beets. In the lesser-known vegetables, are the leaks, egg and pepper plants, broad beans and cos lettuce. These can all be grown in almost any part of Canada. Experts advise the inclusion of something new in the vegetable line

Toronto, 123. Delving into the historical records it is found that of the 150 banks, 44, or 30 per cent, are 100 or more

years of age. As would be expected, oldest of the lot is an English bank, Coutts & Co., which dates away back to 1692.

Control Mold On Products of Farm

Scientists Devise Method to Save Millions of Dollars

AMES, Iowa,-Iowa State College scientists announce discovery of a cheap, practical method of controlling mold-the leech-like growth that teals the life-blood of plants and taints food

Dr. I. E. Melbus and Dr. George C. Kent, botanists, said three years' experimentation yielded a substance -a "toxin"-that will retard the fungus and mold growth on corn, barley, fruits and vegetables.

able to save millions of dollars yearly by applying the toxin on fruits. grains and vegetables. Losses due to fungus disease on

all economic plants, they said, has been estimated as high as \$1,500,-000,000 annually, compared with insect damage estimated at \$1,000.

Mold the botanists explained, is the common family name for the large group of sometimes visible parasites. Higher in the biological scale than bacteria and numbering possibly hundreds of species.

Charity often means that we are willing to pass the hat if other people will fill it.

Friend-Are you going to be bothered much with your income tax this year? No, I have just figured out that

at the highest tax rate they can charge me the government will owe me over \$100. It isn't what you say you are going to do that counts-it is what

you actually do that turns the trick. READ IT OR NOT-The American Buzzard is the fastest flying

Newspapers Earn Praise Says Head

University President Says Radio Will Never Supplant Them

LONDON, ONT. - Simple reasoning convinces him that the radio can not usurp the functions of the newspaper, Dr. W. Sherwood Fox, president of the University of Western Ontario and distinguished educationist, told the annual convention of the Ontario-Quebec division, Canadian Weekly Newspapers Association here. "Chew the Cud"

Putting the question to the delegates, Dr. Fox replied himself: "I've reached an answer which is satisfactory to me. As I know newspaper readers, they like to ruminate over artcud, as it were.

"Well, you can't do much chewing of the cud over what goes in one ear and out the other , which is the radio broadcast. On the radio you hear one thing one second and a long string of other things in succeeding seconds." Bruce M. Pearce, retiring president

of the division, exhorted the weekly editors to "give more leadership than we do at the present time." The small paper, he maintained should do its part in "fighting Com-

munism. Fascism and all the other isms in Canada - because, after all, there is no reason for them in this "The press is one of the indispensible things of civilization," declared

Dr. Fox. "It is essential in maintain-Neighbor-Oh, it was so silly of ing civilization and also in developing it to greater human achievement." It was the "desire and the need" for news which created the newspaper, he continued, reminding that ancient Rome had bulletins on stone which were placed in the forums. The first English paper, he said, was published about 1620, and in strange comparison to today, it published foreign

news almost exclusively. Guide To Civilization

"People of those times thought that local news was too incidental, too trivial, too near at home," he explained. "It has been left to us in modern times

to appreciate the value of local news." It is also interesting to note, he asserted that American newspapers also dealt very little with politics, the people getting the latest on that phase of life through "pamphleteers." "People who criticize newspapers

he said, "don't realize that if there is anything wrong with the papers it is only a reflection of wrongs which have first come into society. Today, newspapers have developed to the extent where they have the power of affecting society as well as reflecting it. They have become a vital guide in civilization."

Dr. Fox held that, during the depression years, the "greatest influence for good" came through the editorial attitude of the average news-

"In spite of the bewilderment which may have been created in the news columns," he said, "the editorial columns of both the weeklies and the dajlies have talked to the people in tone which indicated that panic was not the way out.

"Editorials stressed the need of calmness, and cool deliberation of the facts before remedial action was taken. So I want to pay tribute to the power of the press during the days of depression."

While the circulation is "relatively small," the strength of the weekly paper always impressed him, declared the Western "U" president. "Its editor remains a human being in relation to his readers and that is a wonderful fact," he said. "That contrasts with the editors of the great city dailies whose identities are lost."

Dr. Fox told the gathering some of the facts about the University of Western Ontario which are not generally realized. Next year, Western will celebrate its 60th birthday he said, and if is older than all but three English universities.

With its registration of 2,614 students. Western is larger than any other Western Canada College with the exception of the University of Manitoba, he informed. Its registration is two and a half times larger than that of Dalhousie University, and in arts registration it is larger than either Queen's or McGill.

Dr. Fox held it "unfair" to compare Canadian college problems with those in the United States. Canada, he stated, has only 20 universities exercising degree-conferring powers, while the United States has 880 universities in similar positions. In proportion to the population of Canada, the United icles which interest them - chew the | States would have 240 colleges, he

He concluded with an admonition on the responsibility of an editor. "If the editor has diplomacy, he will know that sometimes the longest way round is the shortest way home," he declared. "Following that precept he can lay before the people good sound constructive thought and make them believe that they want it.

The Awful Child Wants To Know

"Why is the Government giving Army recruits a special diet?" "To make them fit and strong."

"To fight somebody, I suppose. "Why weren't they fit and strong

"Because they didn't have enough to eat when they were children." "Why didn't the Government give them a special diet then?"

"Because nobody realized they would be wanted as soldiers." "Does the Government only feed people up when they've got to fight somebody?"

"Opviously." "If they had been given a special diet when they were children would they be fit and strong now?"

"Yes, and half as big again. There DR. MeGAHEY'S LEG ITCH REMEDY -One application stops itching, stamping biting, \$2.00. Kemptville, Ontario. would also be enough recruits to fill the Army twice over." "Why?"

"Because all those rejected as unfit would be fit.' "Well, if they fed all the children now they would have plenty of sol-

diers when they grow up, wouldn't they?" "Well, why don't they do it?" "Because that would be waste o

Appointments Are Made to Belgium and Italy

WASHINGTON - Six American women who compiled brilliant records as career diplomats paved the way for appointment of ranking envoys of their sex under the present administration.

Miss Frances Elizabeth Willis, and Miss Constance Ray Harvey, assigned to Belgium and Italy respectively, are the only women now in the foreign service. The others married and resigned. Mrs. Ruth Bryan Owen, appointed Minister to Denmark in 1933, was the United States' first woman envoy. She resigned last summer, after marrying Captain Borge Rohde of Denmark,

President Roosevelt has indicated that he would again appoint a woman minister, sending Mrs. J. Borden Harriman to Norway.

Both Miss Willis and Miss Harvey entered the foreign service through competitive examinations, attended the foreign service school, and serve on the same basis as 700 men.

Miss Willis, 37, now third secretary of the Legation in Brussels, assigned also to Luxembourg and the Netherlands, has attained the rank of consul and served as charge d'affaires. Miss Harvey, 32, is vice-consul in Milan, Italy. She went there in 1931 after a short assignment to Ottawa, given upon her appointment in April, 1930.

WINNIPEG.—Still a little pale Medical Advice May Be Sought

May Be Followed Before Writing Course Is Abolished

LONDON-Medical experts may be called in to give their evidence before the plan to abolish writing from the lower grades of the primary schools is effected and the teaching of printing or "manuscript" is introduced throughout the province, it was suggested here recently.

The department of education plan to completely revise writing in the primary schools and to copy the Restaurants, Taverns, Hotels, Hospitals, Butchers, Beauty Shops, Soda Fountains, Dairies, Doctors, Waitresses, etc. 20% Com-English system of a form of printing in the lower grades was made known a short time ago. It is designed to make early training easier for the child. If he learns to make his letter characters in the printing form, the teaching of reading may be made

It is the contention of some educationists that a child's muscles are not developed sufficiently for him to get the most benefit out of the present "muscular movement" style of writing. Some are of the opinion that this type of writing is actually harmful. The opposing group insists that the movement form is better than the more rigid method of printing the letters It has been suggested that the medical opinion will be sought to determine which argument

Teachers in local schools, especially those in the lower grades, have been "printing" the blackboard work so that the child will not become confused fhen he begins to read from a printed book

Details of the plan or information when the primary school curriculum is likely to be revised have not been announced.

Don'ts for Women Who Work on Plane With Men

35 AUSTRALIAN LYRE, KOOKABURRA, Birds, Victoria, Mearthur, Jubilee, Air, NEW YORK, - A tip to women trying to make good in a "man's field of work" -

"Make up your mind never to make excuses or burst out crying," Kate Drain Lawson, stage scene designer said, recently.

"Don't do any of the things most men think all women do," she rephrased it. It is also desirable, Mrs. Lawson said, for a woman working among the

men to speak forcefully, "without losing her temper," and to me "more matter of fact tha nthe men are." Mrs. Lawson one of the few women successful at painting scenery, building sets and assembling stage "props" frowns on masculine mannerisms,

however, and would not 'be caught on a stage in trousers. She wears a house dress when she is nailing a flight of stage stairs or slapping paint on sets and at home, can cook all the favorite dishes of her son Alan, 17.

Handierafts, including rug-making, modeling, fretwork, and hand-loom weaving, are being tested in London

Germany has issued an official decree that not one scrap of paper nor the smallest piece of rag should be wasted, because every minute they help to bring the "four-year-plan" to completion.
