ART OF PLOWING

Plowing is one of the most pleasant, as well as the most important, parts of farming. Provided one has a good team, and the land is free from stone, it is not an arduous task, differing in this respect from some other types of farm work. It is important because good plowing is the basis of good farming. Usually a good plowman is - good farmer, one is a poor farmer who h's land overrun with requires some skill to be practice. The best plownatural aptitude for it, cking this can never beperfect. The good farmer knows the proper depth at which to plow his soil, as well as to how to keep a straight furrow.

No matter how good a plowman is however, he is not going to be much of a success unless he has a welltrained, experienced team. After all, it is the team that does the most of the work, and it is not difficult to keep a straight furrow if possessed of horses that know how to walk straight and pay attention to directions. The horses must also have gait. Anyone who has be a kicked on the ribs by a plough handle when the implement is being pulled by a headstrong team knows just what this means, -Windsor Star.

# STORY TELLER EARNS PRIZE

Hand the prize to that Algoma p he that first sank its teeth into one oar, dived under the boat, struck the oth roar, and used it as a gangplank for boarding the fishermen's craft .-St atford Beacon-Herald.

We would hand the prize to the follow who first told the story. -Chatham News

# ANTI-TANK GUNS

No sooner have experts invented a new and more deadly war weapon than another set of experts develop a wa on to combat it. The tank is no longer a safety-first fort on a bat-Woolwich arsenal gun experfected an anti-tank gur. They clam infantry armed with the anti-tank rifle will be able to stand up to tanks and beat them. A two-pound shell, fitted with special armored-piercing nozzle, is the anti-tank gun. This shell can penetrate the armorplates of any tank and explode inside. One direct hit from an anti-tank gun means death to the whole tank crew and the destruction of the entire mechan.sm.

The gun travels on a small rubber tired true,; and is so light that it can be taken up into the front truck, mounted on a tripod, and brought into act on in less than 30 seconds. It fires with terrific rapidity and can blow up a tank a mile away. The anti-tank r fle is made for use against whippet tanks, and fires special armor-piercing bullets which can bring a tank to a standstill at a range of 500 yards.-Brandon Sun.

# CANALIAN BLANKETS

Lae reputation of the Canadian Government in matters of paternalis seems to have spread across the Inc. Our Morrisburg, Ont., correspondent reports that while strolling down the street he was hailed by a United States tourist who said: "Pardon me. Can you tell me where the Government woollen store is?"

The contributor says he didn't want to appear dumb in case the Government had recently gone into the wool business, so he asked a few questions. It turned out that the tourist was looking for Hud-

# COW RUNS AMOK

The recent tragedy near Sarnia where a farm woman was attacked and killed by a cow which had run into her yard from the road, causes surprise and apprehension as well as sympathy and sorrow. Is a cow, therefore, unsafe?

It is not unusual to hear of people being killed by bulls. Two neighbors of the woman who was killed in Moore Township have met a similar fate in recent years from bulls. But cows are usually regarded, at least by city folks, as placid animals which graze quietly and, in their moments of leisure, chew their cud at peace with the world. Some city girls, out in the country on picnics, are loath to climb over a fence into a field where there are cows. Is their fear justified or are their companions

right in making fun of them? Farmers tell us that, on the whole, cows of course are much quieter than bulls. If cows are together in a group or a herd without bulls, they are almost entirely harmless. If a pushes down on its foundation piers-

cow is taken away from other cows, however, or if something exceptional occurs to make her nervous, there may be instant danger. A cow that for any reason does run amok is more agile than a bull and, with its added

nervousness, is at least as perilous. The moral for city people, because farmers are doubtless aware of the situation themselves, is that while they should not become panicky about cows, they would do well to remember that any animal of that size and strength is a potential menace and that watchfulness at all times is the part of wisdom .- Toronto Star.

#### SENTENCE SUSPENDED "The magistrate suspended sen-

Quite often we read something to that effect in accounts of trials; and a good many, reading, dismiss the matter from their minds with the remark: "Well, that's disposed of!" or "That chap got off easy!" They think, evidently, just "suspended sentence" sees the last of the case. Often, too, it seems that those who have been released on a suspended sentence have the same

That is entirely a mistake. A suspended sentence is just what the name implies-a sentence that is suspended, that hangs over the offender. So long as he behaves himself, nothing further is done about it; but if he offends again during the term for which sentence has been suspended the first offence can be cited against him in case of conviction and the penalty be imposed in addition to

that for the second offence. Suspended sentence does not mean that the judge or magistrate has placed the offender in the position of one who has not broken the law. If he does not take his lesson to heart and breaks the law a second time the magistrate may remind him that he has broken faith. "Authority," the magistrate may say, "has given you a chance to go straight. Only one thing can be done with a person who will not behave; it is high time for you to learn that the way of the transgressor is hard. Society will

stand for only so much." Suspended sentence, then, is not a clearance; nor is it a sign of weakness on the part of the authorities. It is a manifestation of the desire of the law to give one who has slipped a chance to get back on the straight road-a favor which too often is not appreciated .- Timmins Daily Press.

# AN ITEM FOR WIVES

A Goderich man tripped over the lawn hose when he went to turn the water off and fractured his arm in three places. We imagine many married men will make sure their wives read that particular item .- Peterborough Examiner.

# THE EMPIRE

TO CHANGE OUR CLIMATE

Scientists have put forward a new theory. They say that if the icecaps which cover each Pole, North and South, could once be removed, they would never reform. Once they went the whole climate of the earth would be altered. The hard climate of Britain would change to the soft warmth of the semi-tropics. Scientists say that with modern explosives the feat is not impossible and certainly it would be better for mankind to use explosives in this way than to blow each other to death with them .-Sunday Express.

# HEALTH AND ENVIRONMENT

Good environment is a creator and guardian of health, the indispensable son Bay blankets. - MacLean's Mag- I foundation of eager living. Those who ruin natural beauty and those who fail to provide satisfactory houses are alike enemies of the peace of mind out of which alone proceed good craftsmanship on the one hand and good housewifery on the other. Health of body and health of mind, nutrition, physical fitness, the happiness of children depend, in the last issue, upon thinking and feeling and therefore upon the influences and suggestions by which men and women are surrounded. There should be no clash between the demand for beauty and the demand, made again and sgain in the debate, for effective sanitation, for cleanliness, and for preventive medicine. Hygiene is the craftsmanship of beauty and will usually found wanting where beauty does not exist. Mean streets, mean villages, and mean, or blacklisted schools, the existence of which Mr. Lindsay regretted earlier in the week are as defective in spirit as in equipment.-London Times.

methods fail."

'Spartan' Mother Dramatic evidence of the transition of a section of Western Canada to an area of severe drought is contained in news despatches that Lake Johnston, famed for years as a nesting place for millions of waterfowl, and the largest body of water south of the main line of the C.P.R. in Saskatchewan, is now a mere puddle of water and will probably be entirely dry by

the end of July or early in August. Once a lake 25 miles long and 11 miles wide, covering about 275 sections in area, Lake Johnston is already so low that cars can be driven right through the lake from north

to south. With the disappearance of the big lake and its conversion into an alkali plain, farmers of the area south of Moose Jaw are facing an added handicap in the white alkali powder that is now being scattered through the countryside with every windstorm.

Every lake in Alberta is shrinking annually, and some in the southern and eastern portions of the province are in danger of disappearing like Lake Johnston, but none have yet shrunk to the same alarming ex-

The fate of the largest lake in the Southern Saskatchewan area emphasizes the need for rehabilitation and conservation of available water supplies in the drought area. Conservation of the annual runoff of water from the Southern Prairies is becoming absolutely essential if the district is to preserve ability to support any population, and work of providing dams and reservoirs to hold the natural water should proceed as rapidly as possible.

## Sporting Comment By KEN EDWARDS

How do you fishermen react to this piece of information? In 1936 the State Wisconsin's two hatcheries produced 7,000. 000 Muskies for re-stocking purposes. They're probably big fel-

waiting for you

gents out there! One of our American tourists caught a prize trout up north last week, so this should prove we in Canada have a few big ones left.

No one ever talks or hears about the oyster. Well, here is just a fact: hey say that an oyster takes from four to six years to ripen for the market!

"Jimmy Wilson, take the stand: -The New York Giants are willing to pay \$50,000 for his services. The Chicago Cubs want him too, whether or not 50 grand is a little high, we are not sure just now.

I guess they'll still have to stretch it a little to come up to Babe Ruth's top salary of \$80,000 a year.

They say last season at Saratoga and Lexington the sales for 800 yearling were \$1,500,000.00.

Referring back to oysters again, it is said a female oyster spawns 50,000,000 eggs in a year.

Guess we better hoof it along, gang. Thanks a lot for your letters. Our column is dedicated this week to Jack Legge, Toronto's "statistical whirlwind." Adios.

# Autos to Increase 50 Per Cent. In 23 Years

DETROIT, Mich.-Charles F. Kettering, research engineer told the American Society of Civil Engineers a new highway system must be provided in the United States to accommodate 37,000,00 motor vehicles by

The number of automobiles on the highways will increase 50 per cent within the next 23 years, he said while "an increase in motor vehicle registration on our present highway system would almost prohibit much

of our usual driving. "Such a plan would require a prim ary system of high speed highways crossing the country in all directions. It is estimated that 50,000 to 60,000 miles of such super-highways would be sufficient. Leading from them would be a secondary system of good highways serving small cities and towns. The third system would consist of service highways serving the rural areas."

Women's Club Advised Of Qua!- Nurses Need ifications of Leaders

ATLANTIC CITY, N.J.- Women's clubs were warned recently against choosing leaders just because they know how to slap backs, mix well and wear Parisian clothes. "We should select the women wh

can best advance our interests," Miss Lena M. Phillips, lawyer and associate editor of The Pictorial Review, told the convention of the National Federation of Business and Professional Women.

"It is all right to choose a back slapper and good mixer if she has other worthwhile qualities, but the fact she wears Parisian models does not necessarily make her a desirable

"Good will and affability are n substitutes for directness, efficiency, intelligence and vision." The speaker advised the women not

to gloat over the prospect of repealing the federal law prohibiting employment of both husband and wife in the government service. Miss Phillips observed "this dis-

criminatory legislation" remained on the statute books four years and has "only just now been rescinded by the lower House." "What will happen in the Senate", study and straight to duty.

she added, "is stil problematical. Yet the men in Congress who had the power to rescind that bill were sent there largely by the votes of women, who constitute nearly half the elec-

"Women had the power to force change of that law any time they wanted to. They simply didn't exercise it. . . We cannot stop at talking about co-operation. We must practice it, not only in the national body but in the various states."

Miss Frances Maule of New York, author of books on good business behavior for women, warned clubwomen against allowing commercial concerns to get hold of membership

"When we sell our lists," she said, we are violating a principle of business ethics—to say nothing of a definite policy of the federation."

#### \$86 INVESTMENT SWELLS TO \$8.000 IN 2 YEARS PETERBOROUGH.-Two years ago

the Peterborough Rotary Club purchased eighty-six bushels of white winter wheat at \$86 and distributed it among forty-three boys in Peterborough County who were then members of the Seed Club. This year the club, which has shrunk to thirty-five members, will harvest 8,000 bushels of high uniform quality white winter wheat, tentatively valued at \$8,000. Each of the original forty-three members received two bushels of the seed, and last fall their planting ranged from five to twelve acres aplece. This fall the original \$86 investment will have swollen to \$8,000 in the short space of two years. The plan was introduced by Arthur Runions, local Department of Agriculture representa-

tary Club. He told the club at the regular luncheon this week of the suc Several of the boys will display samples of their wheat at the Peterborough Industrial Exhibition, with a fur- States was elected

and Manitoba Game and Fish Associations. She intends to spend about a month in Manitoba before travelling westward again to the Fort Chipewayan area.

# Eight-Hour Day

LONDON, Eng. - Public support for more humane conditions in the nursing Profession is sought by delegates to the International Congress of Nurses meeting here.

An eight-hour day was listed # the chief objective of the drive. On the walls of the convention hall

grim statistics were displayed such as: 84 per cent of probationers catch contagious diseases from patients; only 14 per cent of trained nurses enjoying regulated hours catch them; 26 per cent of the probationers affected die. Other charts listed the disses which particularly assail run-down nurses. "Show this to probationers and you would not get one to take

the job," one delegate remarked. HARD-WORKED STUDENTS

Jean L. Church, of Ottawa, stressed the ordeal to which many student nurses were submitted. "I have seen girls unable to craw

into the bath or even take off the uniforms after a day's work," the Canadian delegate said. "They drop exhausted and three hours later have to be up again for a lecture. In "After 10 years' service of almost drudgery, a nurse is finished, exhausted, ill. The rest of her years

she spends nursing herself." Miss Church said she recognized the obstacles in the way of introducing the eight-hour day, the chief of which was the "almost hopeless" task of convincing hospital beards of the advantages accruing from such an innovation.

She added, however that nurses were not seeking to renounce their duties and responsibilities their profession imposed.

"No nurse worthy of her profession would think of herself or of personal desires while need of box serices", the Ottawa nurse schred "But under present conditions little time is left for personal sludy and recreation." 30 COUNTRIES PRESENT

More than 3,000 nurses from different countries are attending to congress. Three official language-English, French and German-are being used and interpreters give a brid synopsis of each address after it is Canadians participating
