Could Not Straighten Her

Four months ago, this woman dislocated her left elbow. Although the elbow was properly set, she developed neuritis and could not straighten her arm. She was ordered to take Kruschen-with the happy result de-

"I had an accident four months ago, and my elbow was seriously dislocated. Fortunately, it was set right there and then, but afterwards, I could not straighten the arm to its full extent. It was X-rayed, and the surgeon told me I was inclined to be rheumatic. I was ordered to take Kruschen Salts-one teaspoonful in a glass of hot water on waking. Now I am getting along famously. The pain in my elbow is better, and, daily, I am able to extend the arm more easily."—(Mrs.) P.

Rheumatic conditions are often the result of an excess of uric acid in the body. Two of the ingredients of Kruschen Salts have the power of dissolving uric acid crystals. Other ingredients assist Nature to expel these dissolved crystals through the natural channels.

A man went wearily into a barber shop and slumped down in a chair.

Man-"Give me a shave." Barber-"You are too far down in the cháir for a shave. Raise up a little, please." Man-"All right, just let me Give me a haircut."

Railways Reflect Country's Upswing

grown-up hood.

S. J. Hungerford, Chairman and President of the C.N.R., Compares Revenues For This and Preceding Years.

The year 1937 has witnessed a fairly steady improvement in this country's affairs, and consequently in the position of the Canadian National Railways, as will be seen from the following comparison of system revenues for this and preceding years: 1933-Gross revenues, \$148,500,000;

net revenue from railway operation, \$5,700,000. 1936-Gross revenues, \$186,600,000; increase over 1933, \$38,100,000, 26%; net revenue from railway operation,

\$15,100,000. 1937 (Est.) -- Gross revenues, \$199,-000,000: fncrease over 1933, \$50,500, 000, 34%; net revenue from railway operation, \$18,150,000.

How much better the picture might have looked, had it not been for the unprecedented drought in Saskatchewan, may be judged from the crop figures. Canada's wheat crop for 1937 is estimated at 182 million bushels as against 229 for 1936 and 567 for 1928. Saskatchewan's wheat crop is estimated at 32 million bushels for 1937 as against 117 for 1936 and 321 for

Rise In Lumber Carloadings Turning to the forest products industries, it is encouraging to note the sharp rise in Canadian carloadings of lumber, pulpwood, pulp, paper and other items which, during 1937, exceeded by 20 per cent. or more the totals for the previous year. A similar 20 per cent. increase has taken place in Canada's tourist business, and a 15 per cent. increase in passenger traffic on the Canadian National Railways. Travel by rail has been rendered more attractive by the air-conditioning of additional trains, and by an average reduction of 10 per cent. in regular passenger rates made in 1936. It is believed that these measures, together with the continued offering of frequent low fare excursions, have contributed

materially to the popularity of railway passenger service.

Transportation Problem Canada, in company with many other countries, is faced with a transportation problem arising from the rapid development of commercial transport which makes use of the public highways. Certain other countries have, by more thorough regulation of highway transport, come closer to a solution than has this country. It cannot be denied that the failure of commercial motor vehicles to pay a fair share of the enormous cost of public highways constitutes a hidden subsidy to this form of transportation, at the expense of the private motorist as well as the taxpaying public. A Royal Commission, recently appointed, is now examining into conditions in the Province of Onfario.

Issue No. 2-'38

THREE SOUTHERN CONTINENTS BELIEVED ONCE SINGLE MASS

South Africa, Australia and South America Thought Formerly Joined at South Pole.

Dr. W. W. Watts, British geologist, last week offered scientific evidence which he believes shows that South Africa, South America and Australia were at one time parts of a great

continent close to the South Pole. His findings, revealed in the annual report of the Smithsonian Institution, Washington, D.C., gave credence to the old concept of a hypothetical continent of Gondwanaland around the South Pole.

20,000 Years Ago Chief evidence of the Southern continent was scratches of glacial drift over rocks in these parts of the Southern Hemisphere, as well as glacial deposits of gravel. He said that some geologists believe

that the glaciated lands formed part of a single land mass more than 20,-000 years ago. This mass floated like a raft across the South Pole regions. Continental Drift Theory

Dr. Watts explained that this theory fitted in with the hypothesis of continental drift advanced by the German scientist, Alfred Wegener, Under this theory, the present regions of South Africa, Southern South America, Madagascar, Australia, New Zealand, Tasmania and Antarctica broke apart and floated away from each other over the earth's crust like icebergs in the ocean.

ent can be fitted together in fairly about 4,000,000 pounds, with 1,500, good fashion considering the dates of | 000 pounds of Canadian seed to meet severance, Dr. Watts said.

Canadian Seed Shortage Seen

Red Clover and Alfalfa Supplies Appear to be Running Low

Supplies of seed for spring sowing on Canadian farms are none too plentiful, according to information reaching the Department of Agriculture. In most parts of the country there is sufficient seed grain to meet requirements providing it is not sold and shipped out between now and seeding. There is, however, a definite shortage of alfalfa and red clover seed and supplies of other clover and grass seeds are none too plen-

In the drought areas of Saskatchewan and Alberta, 6,000,000 bushels of wheat, 4,300,000 bushels of oats, and 1.100,000 bushels of barley will be required for seed. Fair crops were harvested in areas of Alberta, Saskatchewan and Manitoba, and the best of this surplus, if obtained without delay, would be sufficient to meet the seed shortage.

Decrease In Crops Supplies of clover, alfalfa and some of the grass seeds are variable in different provinces. Drought in central and Western Ontario caused great damage to red clover. The 1937 crop reached only 1,100,000 pounds as against 4,500.000 pounds in 1935 and 2.500,000 pounds in 1936. The Fragments of the supposed contin- requirement for seeding in 1938 is

Signs For \$1,300,000 Airport On Dotted Line

Mayor F. H. LaGuardia of New York signs the warrant for \$1,300,000 which purchases the North Beach Airport for New York City, from the Curtis-Wright Corp. The field will be developed for use in conjunction with the 1939 World's Fair.

Trained Minnows Answer Food Call

Rise to Surface at a Certain Note -Professor Claims Fish

Make Sounds Anglers tell us that certain fish are very sensitive to outside noises, and therefore they keep as quiet as possthle on the banks. Others doubt this, saying that noises have no effect on

Professor K. von Frisch, of Munich University, tells us that some of the more highly developed species can hear as well as, if not better than, human beings. Biologists have always been sceptical about fishes hearing sounds, but there are many other matters in which they are in opposition to practical field observers.

Can They Hear? In deciding the question "Do fishes hear?" it is as well to take the word of those who have tried practical experiments. Professor von Frisch tested a number of minnows, training them to come to the surface to take food when a certain whistle was blown. He tells us that his best minnows could pick up the whistle from

a distance of two hundred yards. These minnows, kept in a large tank, were trained to take food only on a certain note; if they rose to the surface on the wrong note, they received a tap on the head with a twig. They soon learned the difference between the food note and that denoting danger.

Two Methods of Hearing The Professor tells us his experiments showed that fish have two methods of hearing, one through the ears,

RUN-DOWN? IT'S YOUR NERVES

It is usually when your nervous balance is upset that you feel low in health and spirits: Restore that balance by feeding your starved nerves. Take PHOSFERINE. You'll feel better almost at once. At druggists, 50c, \$1.00 and \$1.50.

and the other through the skin. Pike, perch and eels are only able to hear by the latter method, and for this reason cannot pick up high notes, al though there seems to be no limit to their range of low notes.

fish make a sound, but Professor von Frisch has found in his experiments with minnows that they utter small "peeping" poises not easy for the human ear to catch. The total area estimated as sown

I doubt if many of us have heard :

to the principal field crops in Canada for 1937 is 56,678,900 acres. The output of central electric stations in Canada during October amounted to 2,365,062,000 kilowatt

in October a year ago. More than 42,000 miles of railway mileage are in active use in Canada, a mile for every 245 persons of the population.

Highway Nearly 100 Miles Long North. Part of Plan to Discover Hazards; Survey Carried Out Under All Conditions.

A "test-tube" highway, nearly 100 miles long, is expected to develop basis for reducing accidents in Pennsylvania.

Typical as to communities, open country, paving types and dimensions, the test road will apply only to remedies which have proved effective. Furthermore, remedies and traffic devices will be restricted to those which can

be put to state-wide use. In an interview, Mr. Canning, the Engineering Director, expressed high hope for the experiment's success. "So far as we know," he said, "this is the most extensive highway safety test ever undertaken. On a much smaller scale, certain test observations have been made in the past, but we can find no record of an experiment such as the one now under way in Pennsyl-

THE SOLID FUEL FOR SOLID COMFORT

A violent social upheaval, rather than a natural force, may have led the ancient Mayas to abandon their Central American temples and pal-Negras, an ancient Maya city in northwestern Guatemala. Communities, Religious Centres

"Many scientists long have felt that it was the inability of the Maya Indians to cope with the enveloping jungle, or some other natural force, that led to the abandonment of their many elaborate temples and palaces," Satterthwaite said.

Mr. Satterthwaite explained that the communities of the ancient Maycities in the strict sense of the word, The absence of kitchens or sleeping quarters in the palaces indicates they were used primarily for religious or civil ceremonies, he said.

between priests and laymen. "Possibly the change took the form of a violent social upheaval in which the priests themselves, and all that they stood for, were overthrown. That we do not know, of course. But the discovery of evidence that human agencies played some part in the destruction and removal of sacred ob-
