Future Bright For Cattlemen

Manfr., 855 Bay St. Toronto.

Alberta Ranch Country Hopes To Get Out of the Red Ten lean years are over for the

ranchers of Southern Alberta they look forward to a year of plenty of feed and, perhaps, plenty of

"Give us decent prices this fall and we'll be on our feet again," was the comment of cattlemen attending Calgary's Exhibition and Stam-

For a decade Alberta ranges were over-grazed, herds depleted and prices far below cost of production. Grass Is Abundant

This year grass is abundant, particularly in the southern foothills. Ground devoid of grass for years has been a green blanket; cattle are in fine shape and market prospects are good. "The foothill country is general-

ly the best I have ever seen it in the past 22 years," said Professor W. L. Carlyle, manager of the Duke of Windsor's E.P. ranch near High

#### C. N. R. Operating Revenues Down

The statement of operating revenues and operating expenses of the Canadian National Railways all-inclusive system for the month of June issued at Montreal shows operating revenues were \$13.702.-244 as compared with \$16,091,901 in June, 1937. Operating expenses were \$14,472,826 against \$15,656.713 during the corresponding period of

last year. For the six months period ending June 30, operating revenues were \$82,759,559, against \$94,996,314 in the corresponding period of last year. Operating expenses up to June 30 of this year were \$88,439,-541, compared with \$88,328,366 for the similar period of 1937.

The summaries follow: Month of June

Operating revenues, 1938, \$13,-702,244; 1937, \$16,091,901; Decrease \$2,389,657. Operating Expenses, 1938, \$14,-

472.286; 1937, \$15,656.713; Decrease \$1,183,887. Net revenue deficit. 1938, \$770,-582; 1937, \$435,188; Decrease \$1,-205,770.

Aggregate to June 30th Operating Revenues 1938, \$82,-759,559; 1937, \$94,996,314; Decrease \$12,236,755. Operating Expenses, 1938, \$88,

439.541: 1937, \$88,328,366; Increase, Net Revenue Deficit, 1938, \$5,-679,982; 1937, \$6,667,948; Decrease,

#### Flightless Rail Worth \$5,000,000

\$12,347,930.

This Rare Bird form South Atlantic Has Never Been Captured Alive-Try And Get

Want to try your hand on a treasure hunt, with \$5,000,000 as a prize if you are lucky? They say the old romantic days of such expeditions are over - but don't you believe it. True, it's not the doubloons or pieces-of-eight that await the lucky finder. In fact, it is only a bird, and a small one at that. But it's worth, alive, a cool five million. Or so they say.

The bird is a flightless rail, and is found only on Inaccessible Island (there's a name for those with the spirit of adventure!), in the South Atlantic. This rare bird looks like a small black chick and has long, slender legs and short, soft wings.

Mounted Specimen Only A mounted specimen has been presented to the American Museum of Natural History by the

Rev. August G. Partridge, who captured it when he was British Commissioner on Tristan da Cunha, the worlr's loneliest island. Said the Rev. Mr. Partridge: "A live specimen of the bird itself would be so rare that it would be a good buy at \$5,000,000.

More than 20,000,000 pounds of "The skull though not quite comcrude rubber was shipped into Arplete shows everything except the gentina last year. size of the brain. Half of the face is preserved with the whole lower half of the left side of the skull showing, including the cheek arch,

#### ... Gardening Notes... ear cavity and articulation of the "We have a practically complete palate with most of the teeth and a nearly complete lower jaw," he NEXT YEAR'S IRISES

One of the "must" items which many gardeners have marked down on their schedules for attention during the next few weeks is the ordering of irises for new plantings, or the improvement of old beds.

Unlike most garden perennials the bearded irises can be set out during the midsummer. In fact, they are better planted then than later in the fall, when root growth again becomes active.

No other flower so easily grown as the iris has such a wide range of color combinations. Almost every color, shade and hue is to be found in the petals of this attractive flower. Because of the ease with which it may be hybridized, many amateur and professional plant breeders have been making thousands of crosses yearly, with the result that seedlings have been grown which not only produce taller and better branched stalks, bearing more and larger blossoms, but new colors and color combinations have been also brought into existence.

THE FINEST PANSIES

must be sown at the right time. Planting during the first two weeks of August results in the strongest plants, though early September is not too late. If one has a greenhouse, seed may be started indoors in January.

While pansy seed may be sown in early spring, the practice isn't recommended for sections where summers are hot and dry. Pansies delight in a cool climate and to obtain the finest flowers gardeners in warm sections must time their blooming period to fall in the cool spring months. Since pansies are biernials, August sowing will give the plants sufficient time to grow and develop for a spring display of flowers.

By far the best place to sow is in a coldframe, yet a well prepared sheltered seedbed will give you very good results also. Unless careful attention is paid to the preparation of the soil, results are often disappointing.

poor in comparison with two or three other countries of comparable national stock and condition of life, officials here admit. The child and maternal mortality rate, in particular, is above that of some other countries where vigorous methods have been employed to assure the baby a safe start in life and to also make maternity relatively safe.

Ground-cover plants have an important part in the semi-shaded garden, taking the place of grass where it will not thrive and to fill gaps in the flower borders. Blue carpet bugle (ajuga), white lilyof-the-valley, light blue crested iris and blue leadwort (plumbago) are flowering sorts which do well in the shade, as do the evergreen Japanese spurge, periwinkle, the evergreen winter creepers (euonymus) in several varieties and the

#### cases of pellagra in both the south of the United States and southern

Every motorist in Vancouver is liable to arrest but it took an inquiring reporter to find it out. A study of city by-laws showed one directing traffic to keep to the left had never been repealed. Vancouver has been "keeping to the right" for 18 years!

If you must drive your cows

off Metcalf street. An ancient city by-law, enacted when Ottawa was small and animals on the street were common, made it an offence to drive them along this central thoroughfare. Metcalf was the first Ottawa

street to be paved with asphalt and the city fathers of that day were so proud of it they decided to reserve it for human beings and horses. The by-law is still in

Tough On Pedestrians

Halifax has its own group of old statutes that have never been repealed and nimble pedestrians, although unaware of it, were also breaking the law every time they jumped to escape being hit by a vehicle on the streets.

from walking on the streets on Sunday is also still on the books.

## **Beautification Of** Ottawa Begins

chitect The Long Range Plan Is Going Forward

tect, famous on two continents for his town-planning, arrived last week in Ottawa to find work well started on the long range plan for beautification of the national capital he submitted to the Government six months ago.

Chief architect for the 1937 Paris Exposition and now consultant in the creation of New York's 1939 World Fair building construction, Mr. Greber arrived to discuss further details of the Ottawa improvement plans.

Central feature of Mr. Greber's plan for Ottawa is the site of the National war memorial located on the plaza over the Rideau Canal. Since his last visit the Post Office building has been levelled and the work is now progressing behind a high fence to prepare the base for the memorial.

Pineapples from France are being cultivated in hothouses on the Black Sea coast of Russia.

Recommended by Hon. N. O. Hipel of Preston, Speaker of the Ontario Legislature, a new improved system of highway lighting is now under consideration by the provincial Department of Highways and the Hydro-Electric Power Commis-

For Safer Driving

The system will be installed on the new Preston-Galt double highway if costs are found to be favorable with the present highway lighting system. The new lighting plan, which it is claimed will make safer driving and eliminate eye strain, will embody underground wiring and the elimination of poles. It will revolutionize the system at present used on provincial highways and will be somewhat similar to that used on certain highways in France. Under the plan a lighting unit of portable type three feet high along the highway, with lights at various locations will be provided. It is believed that the cost will be lower than the present overhead

#### Founders To Be Honored At Ex.

Diamond Jubilee of C. N. E.'s Establishment Comes This

Descendants of those who took part in establishing the Canadian National Exhibition during its formative years are being widely sought throughout Canada and the United States, it was announced last wek, by George Brigden, the

C. N. E. president. Because this year marks the Diamond Jubilee of what is now the largest annual exposition in the world, it will be designated as "Founder's Year" in honor of the men and women who contributed organizing ability, presented exhibits, and attended the slowlygrowing "fair" during the years immediately following its establishment in 1878.

Wear A Special Badge It is to centre attention on the fact that the Canadian National Exhibition is "the people's show" that the families of the founders are to be honored this year, it was pointed out. For this reason, anyone related to one of the founders will wear a special badge on the Founders' Day. Defined as founder is any exhibitor, visitor or executive officer who was connected with the exposition prior to 1907. Eligible as descendant is a son, daughter, grandson, granddaughter, niece or nephew.

a devil of a fix."

The student walked into class wearing a coat which truly outdid Joseph's. The clash of colors almost made a noise. He just could not have hoped to get by without some comment but perhaps nothing like what he actually did get from one of those ever present back-of-the-roomers:

"Say, that's the first time I've ever seen a sunset with buttons."

He - "You've been out with worse looking fellows than I am, haven't you?"

She did not reply. He - "I said, you've been out with worse looking fellows than I am, haven't you?" She - "I heard you the first time. I was trying to think."

One Sunday night, the preacher sternly roared: "When those young men in the rear get through flirting with the girls I hope they will give me a chance," and he wondered why the congregation

laughed. Junior - "Grandpa, we've been arguing whether the clock stands or sits on the mantel." Grandpa - "It is half - past eight by the clock and it is only a quarter to eight; therefore,

should say it lies on the mantel."

Most Modern Methods of Harvesting Are Demonstrated.— Field of Wheat In Hamilton's

For probably the first time in the city's history since it was incorporated, a field of grain was grown, harvested and threshed within the limits of Hamilton, Ont. The harvesting was done in a field on the property of the International Harvester company, right in the heart of the city's industrial district. The demonstration was witnessed by nearly 100 prominent Hamilton business men and industrialists.

Leave Grain Standing The demonstration showed the great advance made in farming methods and how the farmer's burden was being lessened. A field of wheat grown for experimental purposes was cut and threshed by a machine known as a harvester combine. Just recently these machines have been introduced to Ontario grain growers in an effort to cut down the cost and time of harvesting and threshing the grain. The objection to the combine previously has been the fact that Ontario wheat does not ripen evenly, but 12 machines of this make now operating in the province are giving satisfactory service, it was reported. With these machines the farmer can allow his wheat to stand in the field until the time for threshing

Drudgery Eliminated The combine eliminates the cutting, binding and threshing operations necessary with the ordinary method of harvesting. The machine is towed by a tractor that supplies the necessary power. The grain is cut and threshed in the machine as it goes through the field. The threshed grain is put into a hopper and this hopper is emptied periodically into a truck or wagon at the scene of operations. Only the straw is left to be raked up after the threshing. The threshed grain is of as good quality as that obtained with the ordinary methods. The machine demonstrated cuts a six-foot swath and can do 20 acres a day. The field threshed yielded about 40 bushels to the acre.

#### More Pheasants Being Released

Ontario pheasant shooters will have 20,000 birds to shoot at next October instead of 5,000 as was the case last year.

D. J. Taylor, deputy Minister of Game and Fisheries, says that a revolutionary change in the province's pheasant shooting policy will be in effect in October when 50 townships in 13 counties are opened to hunters for one to three

A Record Number "Each township will issue from 100 to 250 special licences," Mr. Taylor said. "The township clerk will have the right to reject the application of any person he doesn't think is a real sportsman."

The Deputy Minister said the Department experimented with the system last year and found it a success despite the fact only 5,000 government-raised birds were rebirds available this year is the greatest number to be made available in any one year in the history
