A FACT A WEEK ABOUT CANADA

HONEY BEES "The little busy bee" has figured from ancient times in our proverbs. It competes with the ant as a symbol of industry and perseverance wherewith to sting lazy people into increased energy. Bees are frequently alluded to in Scripture and in Egyptian hieroglyphics. Aristotle, Virgil and Pliny wrote about them. Saxon lords were sometimes paid their rents with honey.

All through the warm months the honey bee will be found feverishly gathering the nectar from the blooms which abound in the fields and gardens. In most cases they store away far more than their requirements for the coming winter and the surplus is taken away.

Canada's large honey-producing provinces are Ontario and Manitoba, although Ontario's proportion far exceeds that of Manitoba. The production of honey during the year 1934 amounted to more than 24,000,000 pounds. We export from two to three million pounds, mainly to the United Kingdom.
