Systems Recommended Suitable for Rural Homes

Boon-Sewage Disposal-The Septic Tank - Extension Work Physics Department—Watering the

(Contributed by Ontario Department of Agriculture, Toronto.)

Hot and cold water on tap, kitchen sink, laundry tubs, bathtub, shower bath, and water flush closet, and the necessary pipes for carrying away the wastes to some suitable sewage posal system in the yard outside.

A very good system complete can be put in the average-sized home for \$350, and in view of the fact that will give you real worth while service every day for a cost of about 8 % cents a day figured on interest

In the Physics Building, O. A. C. there is installed a complete plumbwoman and child in the congregation. ing system for inspection of students and visitors interested in this work. possible of putting the various parts together, thereby saving both mater al and labor to the greatest possible degree. If you are interested drop in and see it, and maybe we can assist you in getting that very neces-

To perfect the plumbing system just referred to it is necessary to build some suitable construction for disposing of the sewage and waste Mr Wetherall, Iranector of High from the home. In the country this must be either a cesspool or septic tank. The cesspool may be all right for a time in porous gravelly welldrained soils, but usually it is a menace to health by contaminating the water supply or becoming a nuisance whenever it overflows. The septic tank is the modern method, Office Hours: and gives good satisfaction as a rule. We have a very fine working or demonstrating model of it installed on a large table in the Physics Building, and it is very useful for is like and how it operates.

> The Septic Tank. It consists of a large concrete tank divided into two compartments by a vertical partition. The size for a single house is about 4 feet x 8 feet and 31/4 feet deep. This tank holds the sewage long enough for a certain kind of bacteria to destroy the solid matter. When the liquid accumulates to a certain amount a nonmechanical affair called a siphon empties one of the chambers into a system of field tile, called the absorption bed, laid shallow under the ground. Any remaining sewage is destroyed in the soil by another kind of bacteria that live near the top of the ground. In this way these friendly bacteria are enabled to do a very valuable work for us. This is science applied to a useful purpose.

We supply bulletin and blue-print to anyone wishing to build a septic tank. All necessary information is given in these, and by their helpful it. Cost for cement, siphon, fittings and tile amounts to about \$52. The tank may be located close to the lawn or garden. Extension Work of the Department Duncan, Dundalk. Phone 42, r 4-2.

of Physics. The extension activities of the Department of Physics assist those seeking advice or assistance in connection with the regular branches of the department's extension activities, including: Installation of water and Holstein Corr: At a representative sewage systems, lightning rod installations, drainage surveys, farm cold storage, silo construction, anti-freese nixtures. Blue prints of septic tank installation, hydraulic rams, protection of wells, small ice cold storages, ems and farm plumbing have been prepared, and are now obtainable upon request from the Physics Department, Ontario Agricultural College. -R. R. Graham, O. A. College,

Watering the Garden.

Remember that a good soaking once a week is more beneficial than light sprinkling daily. Be judicious n your use of the hose. Leafy vegesoaked, as well as the roots. fruit bearing plants and vines, like omatoes, eggplant, cucumbers, peppers and melons should not have the tops soaked at all. It washes away pt to cause blight and fungous

Don't water the garden in the heat of the day. Wait until late in the afternoon and when it has been given the estate of WILLIAM WEIR, a good soaking it will have time to soak into the soil to enable you to rake up the surface easily next morning, preventing the soil baking and conserving the moisture. Regular soakings for the ever-bearing strawberries and other small fruits, followed by mulching, will prolong the fruit bearing season and improve the quality. Too much watering of grapevines tends to cause an excess of cane growth but a reasonable amount
