

Says Rubber Tires Speed Farm Work

Professor at Macdonald College, Quebec, Declares Rubber Tires On Tractors Are Important Agricultural Development

Application of rubber tires to farm tractors will prove the most important development in farm machinery promoted for many years, in the opinion of Professor L. G. Heimpel, Head of the Agricultural Engineering Department, Macdonald College, Que. Speaking before the 26th annual meeting of the Ontario Plowmen's Association on "New Developments in Farm Machinery," Prof. Heimpel cited as the basis of his prediction the fact that "the rubber tire has made the tractor a very much higher speed machine. Most of them are now equipped with a fourth speed for road work by means of which speeds of from 19 to 16 or more miles per hr. can be secured at nominal engine speed."

RUBBER-TIRED WAGONS NEXT

The rubber-tired tractor will make imperative the use of rubber-tired wagons, which will be brought much closer to the ground. This will greatly increase convenience and ease of loading, and speed up all kinds of farm haulage operations, according to Prof. Heimpel. Now will it entail the scrapping of all wagons now in existence. "Already I am in possession of a bulletin describing the remodeling of existing farm wagons by simply clamping to the lower side of the axle of old auto-wheels complete with wheels and tires."

Many farmers are already putting this improvement into practice, he said. Those included owners of the heavy spraying outfits who have mounted their machines on rubber to good advantage. Growers near big cities are buying used truck tires for this purpose.

Modern Etiquette

BY ROBERTA LEE

Q. Didn't Sir Walter Scott write something about the importance of etiquette?

A. Yes, he said, "A man may with more impunity be guilty of an actual breach, either of real good breeding or good morals, than appear ignorant of the most minute points of fashionable etiquette."

Q. Should a girl offer her hand to a young man when he is introduced to her?

A. It is her privilege to do so, though customarily she does not. The young man should never offer his hand first.

Q. How long before the stated hour should guests arrive for a luncheon?

A. From five to ten minutes before the stated hour.

Q. Whose fault is it if a late guest at a party seems to be left alone, or uncomfortably "out of it"?

A. The fault is with the hostess. It is her duty to see that the late guest is drawn into the conversation or game, or whatever is going on.

Q. Is it all right for a person to take an extra large helping of some dish that he particularly likes?

A. No. It is better to take a moderate amount, then accept a second helping, if it is offered.

Q. How should a divorcee sign her name so that she will not be mistaken for the second Mrs. Chas. Wilson?

A. By prefixing her maiden name to her former husband's surname and signing Mrs. Brown Wilson.

Music Needed In Education

Teaching Singing in Ontario Schools Is Coming to Be Considered An Essential

Although music does much to create a community spirit in peacetime, its influence in time of war is even stronger, Toronto Electric Club members were told in a recent address by John Murray Gibson, general publicity agent of the C.P.R.

"The world today," continued the speaker, "is becoming richer just through the growing interest in music. The teaching of music and especially singing, is coming to be accepted in Canada as essential to a good education. Ontario is a leader in this respect under the direction of Roy Fenwick."

FINE CHORAL MUSIC
"In choral music, thanks to the pace set by the late Dr. Augustus S. Vogt, who made the Mendelssohn Choir of Toronto the foremost ensemble of voices in North America, we have choirs in Canada that stand up to any," he said. "Dr. Vogt helped also to make the Toronto Conservatory of Music one of the leading musical colleges of this continent."

LIPTON'S TEA

How Can I?

BY ANNE ASHLEY

Q. How can I obtain various colours for cake icings or candy?
A. For pink color, use red beet juice; for green, use spinach juice; for yellow, use orange juice or egg yolk; and for lavender, use blackberry juice.

Q. How can I prevent scratches on hardwood floors from the casters on heavy pieces of furniture?
A. Remove all the casters and roll pieces of adhesive tape around the outside of each one. This will act as a casing and will not mark the floor.

Q. How can I clean a man's light felt hat?
A. Make a paste of equal parts of arrowroot and magnesia and cold water, and brush over the hat. Dry thoroughly and then brush off.

Q. How can I choose a good broom, and take proper care of it?
A. Choose a broom with green-colored straws, but avoid one with dark reddish straws. Be sure the brush is firm on the handle. Never allow the broom to stand on its bristles, and give it a bath in soap-suds occasionally.

Q. How can I choose a good broom, and take proper care of it?
A. Choose a broom with green-colored straws, but avoid one with dark reddish straws. Be sure the brush is firm on the handle. Never allow the broom to stand on its bristles, and give it a bath in soap-suds occasionally.

Q. How can I choose a good broom, and take proper care of it?

Ontario Plans Highway Delay

Until After War — Big Program Then Will Provide Employment

The Ontario Highways Department is considering a huge three-year program of highway building which will be started after the war is over, Highways Minister T. B. McQueen told delegates to the annual convention of the Ontario Good Roads Association.

"I think we should prepare at once for the after-war period and as a government we believe highway construction is the type of work that offers the greatest amount of employment with a chance of fair returns," he said.

EXPENDITURE CUT
Mr. McQueen announced expenditures for the 1940 Ontario highway program had been cut by 16 per cent, compared with last year in the government's economy campaign.

HEALTH TOPICS

CANADA'S HEALTH, 1939
The people of Canada enjoyed exceptionally good health in 1939, writes Dr. John W. S. McCullough, of the Health League of Canada.

The mortality rate was 9.5 per thousand of population as compared with 10.6 in 1937. In 1939 the record (official figures not yet available) was excellent as indicated by the very low death rate among approximately 1,250,000 Canadians who hold policies in the industrial department of one of the large insurance companies. Not only were the death rates in 1937 and 1938 the lowest in the history of the company, but these two years, jointly, had the lowest mortality rate in the Canadian experience of the company. Moreover, the mortality rates for 1939, form a new low for tuberculosis, pneumonia, scarlet fever, the diarrhoeal diseases, and all the forms of accident (combined).

Tuberculosis Down
Chief interest lies in tuberculosis. Today this disease is number 3 in the list of causes of death of Canadian wage-earners, instead of number 1, as it was 11 years ago.

The current death rate is 7 per cent. Lower than in 1928, and 45 per cent. lower than 1929. As a result of this reduction alone, hundreds of Canadian lives have been spared every year.

The unfavourable side of the report is observed in an increased mortality for cancer of about 35 per cent in 10 years. Diabetes, heart disease, diseases of the coronary arteries and chronic kidney diseases show appreciable rises in 10 years. For all causes of death combined, the 1939 death rate is lower by one quarter than 10 years ago. This is something to be thankful for.

CHILD, ENTHRONED, RULES 3,000,000 WORSHIPPERS

On the roof of the world in mysterious Tibet sits a six-year-old boy, enthroned civil and religious ruler of 3,000,000 worshippers. Son of a humble herder, the lad is believed by his followers to be the reincarnation of the 13th Dalai Lama who died on Dec. 17, 1933. Bearing the name Ling-ergh La-mu-tan-chu (Dip the child), the boy is believed to have been born at the moment the old Dalai Lama died.

WATCH BRAIN WORK
A glimpse at the chemical operations of the brain, which may help scientists to learn more about what happens physically within that organ when it functions, has been obtained through research with radioactive substances at the University of California.

FLYING MOTORCYCLE
A recently developed "flying motorcycle" plane which can take off in cramped space with lightning speed in the air has recently been tested for the United States army. Robert Kerlinger, test pilot, took the manufacturing company's YO-51 on a runway, gunned the 420-horsepower engine and the craft hovered almost straight up in the air and, at a respectable height, hovered virtually motionless.

Hardly more than 50 feet was required for the takeoff of the high-winged, slender fuselaged monoplane.

SCOUTING ...
Five year record of Canadian Boy Scouts shows saving of 150 persons from death by drowning, fire or serious accident. Three young heroes paid the supreme sacrifice.

Even a cursory examination of the files over the five-year period ending December 31st, 1939, indicates to what extent the Boy Scouts of Canada have kept their Scout Promise, especially the part of it which obligates them to "help other people at all times."

112 Persons Saved From Drowning
Awards made indicate that the lives of at least 150 persons have been saved by Boy Scouts during the period referred to. A total of 112 persons were saved from death by drowning alone. Many others have been saved from possible
