Clothes That "Do Something"

Here's Advice On Choosing A Wardrobe To Suit Your Own Special Type

"No matter what your neighbors and best friends are wearing, don't ever be found in a dress that doesn't do something for you, as a person, and for your figure."

This advice comes from Madame Lyolene, famous French ccuturier, who is designing clothes in New York these days. 'With such good figures on

which to drape clothes, there is no reason why women on this continent should not be the bestdressed in the world."

LOOK YOUR BEST It's all a matter of knowing what type of clothes brings out your best points and conceals less attractive ones, Madame Lyolene points out.

Designers generally approve of the woman who, having found a flattering pattern, has half a dozen dresses in various colors and materials made from that pattern. But, even se, they think she may not be very imaginative and should be willing to spend more time on her wardrobe.

BECOMING COIFFURES It's true, too, that the hair experts would like to have every woman change her hair style at least once every two years. But they would rather have her change the old coiffure slightly now and then than to make a radical change in favor of an unbecoming arrangement.

Hay Fever Season Prospect Is Bad

Ontario's 100,000 sufferers from hay fever are in for a bad season, health officials said last week. The present season, marked by a cold spring and moist early summer, has given ragweed almost perfect conditions for early development.

Dr. W. V. Watson of Cooksville, Ont., an allergy specialist, said hay fever victims seem to be getting more numerous every year. More than 80 per cent of the sufferers in Ontario are allergic to ragweed.

Banquet Days Are Here Again

By Frances Lee Barton A S the days get cooler, we be-A gin to use the word "banquet" gain. Even our home desserts are

are in order. Guests expect them. The members of the family hope for them. Here's one:

Banquet Pudding 1 or 2 egg yolks; 4 cups milk; cup quick-cooking taploca; 1/2 Sup sugar; 1/4 teaspoon salt; 1 or 2 egg whites; 1 teaspoon vanilla; 1/3 to 1/2 cup diced preserved or crystallized ginger; 1/3 cup cream, whipped; nut meats, coarsely

Mix egg yolk with small amount of milk in top of double boiler. Add remaining milk, tapioca, sugar, and salt. Place over rapidly boiling water and cook 10 to 12 minutes after water boils again, stirring frequently. Beat egg white until just stiff enough to hold shape. Fold hot tapioca mixture gradually into egg white. Cool - mixture thickens as it cools. When slightly cool, add flavoring and ginger, reserving 2 tablespoons ginger for garnish. Chill. Fold in cream. Serve in sherbet glasses. Garnish with additional whipped cream, and sprinkle with ginger and nuts. Serves S.

Quints Possess Perfect Teeth

There's Not the Slightest Indication of Dental Decay

The Dionne quintuplets at six "have perfect sets of teeth without the slightest indication of decay." their dental adviser, Dr. Arnold D. Mason told the American Dental Association last week.

Dental authorities, who were meeting in Cleveland for the centennial convention of the association, say perfect teeth are found only in one out of 100 children at this age.

Dr. Mason, dean of the University of Toronto medical school. said in a statement to the asso-

"It is remarkable when we realize conditions under which the quints came into this world that we find in their sixth year perfect sets of teeth without the slightest indication of decay."

Look, what thy soul holds dear, imagine it

To lie that way thou go'st, not whence thou com'st. —Shakespeare.

BEATRICE FABER

SYNOPSIS: In a little University town in Southern Germany, Herr Roth, a science Professor, and a non-Aryan, has just celebrated his sixtieth birthday, surrounded by his lovely and devoted family. But suddenly, comes the news that Hitler has become Dictator of Germany. Fritz, betrothed to Freya Roth, rushes out to the Party meeting, along with Otto and Erich, the two sons of the Aryan Mrs. Roth, by her former marriage. Then, almost overnight, the atmosphere of the country seems to change. The boys, who had always been friendly with Martin Breitner, Fritz's rival suitor for Freya's hand, turn on him because he does not concur in their new political beliefs, labeling him a Red and a Pacifist. Then Freya begins to feel a revulsion towards

CHAPTER THREE A few days later Freya had made her decision and on a snowy afternoon she stood in the living room and told Fritz that it

Fritz as she sees his growing fa-

naticism for a cause which she

considers dangerous and wrong.

was over between them. "I've been honored by your love Fritz," she said earnestly, "but our life together would be impossible. You'd have to stoop to me, to sacrifice your career perhaps and I've too much pride to accept that. Too, I should have to condone a persecutor of my father's people." She put up her chin. "I must tell you the truth. For that, I don't love you well enough."

For long moments, he pleaded with her, hurt and bewildered. He couldn't accept this dismissal. They had always belonged to each other. All these years together must mean something . . .

An unexpected interruption came as young Rudi burst into the room. He was dancing up and down with importance. There was a card he had to fill out. The teacher at school had given it to him and been very serious about it. That probably meant he was a somebody. See? He got special attention.

Freya tooked at the card, then

turned to Fritz and said in a stifled voice, "There's-nothing more to say. Now, more than ever, it's - goodbye."

THE BOY'S HERITAGE In his study, the Professor, with his wife, set about the grim task of explaining that all-important card to young Rudi. As he re-read the printed words, he braced himself. The form bore the heading,

"Proof of Aryan Descent. Percentage of Jewish blood." He had spoken aloud and he saw his wife's shoulders sag a little. There was shame in her face, that her people could do this to her husband and their

Calmly, rationally, Professor Roth sought to explain the boy's heritage to him. But as he proceeded he could see the child's eyes grow wide with panic. Rudi was remembering things - how the boy next to him had moved his seat the other day, how some body had thrown a stone at him this afternoon. Now he began to

"I'm not a Jew," he wept, "I don't want to be a Jew. They say that Jews are bad people. They made us lose the war and they're spies and traitors and every-

Patiently, Professor Roth spoke again. Mendelssohn had been a Jew. So had the poet, Heine. And that kind little Mr. Schmidt at the grocery. And he himself wasn't a criminal or an enemy of the country. Finally he picked up the card. 'You're half Jewish, Rudi, and so is your sister. Are you ashamed to be my

The boy's eyes were still wet but he shook his head bravely. "No father."

WORLD OF INJUSTICE "That's right." Painfully, the Professor nodded. "Be wise even if they are ignorant. And kind, even if they are cruel. You've got to be a man, son, before your time but I know I can rely on you and be proud of you.

Chin up." Now the boy looked at him clearly. There was a frim line to his lips. At ten years he was accepting the world's strange injustice but between him and his father there was confidence and understanding. Together, they would fight the battle through.

But in class next day there came a dire happening of such grotesquerie that even the Professor's courage was almost shar-

It happened that the lecture subject was on the physical composition of the red blood corpuscles. In the midst of the dissertation Holl, the Storm Trooper leader, rose and asked with challenging insolence: "Is it your opinion that there is no difference between the blood of an Aryan and the blood of a non-

Aryan?" Quite temperately, the Professor nodded and went on with his scientific explanation. But all at once a storm broke loose. The students began to pound their desks and accuse the Professor of lying, or putting up an impudent defense of racial degeneration, of questioning their Leader's principle of Aryan racisl ably a tenth of the time that it purity. Once, Fritz went to takes to wear away at present.

Professor Roth and begged for some concession. But when this was refused, the class rose as one

and walked out. Alone there in the room the Professor bowed his head. So it had come. A titanic, insane catastrophe had descended over his beloved land, brought on by the greed of men and their urge for power. They were sending up racial smokescreens, poisoning the hearts and minds of people, blotting out reason from their

brains. BURNING OF THE BOOKS All at once he was conscious of a terrible sound from outside, the hoarse savage howling of a mob. But it seemed to come from a single voice. He moved to the balustrade. Down below, there was a huge, crackling bonfire and students danced around it.

The flames were devouring a pile of books and as each new one was flung into the fire - their chant became more and more demoniacal.

"We burn you, Heinrich Heine. We burn you, Thomas Mann. We burn you, Albert Einstein. We burn you! We burn you!"

There in the dark, the Profes-

sor stared down, sickened, and crumpled of heart. It was as if his very soul were being seared by these leaping flames. The days and weeks became

taut with hysteria. Dinner at home was a silent meal these days - served by Mrs. Roth or Freya for Marta had early left this "Jew house," as she had contemptuously termed it.

Freya wondered and yet was afraid to wonder, where it would all lead them. A long night—the Dark Ages was upon them. Stories of terror came to her ears-accounts of Storm Troopers bursting in at dawn - arresting the head of the family. Then the prisoner would vanish into the unknown. No one was safe, Jew, liberal or worker. The streets seemed ghostly. One mustn't talk, or even think. Someone would overhear and report.

HER SOLACE, MARTIN Freya's only solace was Martin. At night, she would meet him on the brdige near the Cathedral and they would whisper talk of old times, of better times when they had gone on picnics and listened to the Wednesday afternoon concerts.

But even that was spoiled catastrophically one night when Martin brought her home. Erich and Otto had been acting like stragners but even Freya hadn't thought they would go so far as to assault their old friend right in front of their own door. Only Freya's screams saved Martin for her mother came running out and shamed the boys into stop-

ping the unevenly matched fight. That night Erich and Otto took their belongings and left. It was clearly a hard choice for them but they made it without even a word of farewell to the stepfather whom they had once loved

so dearly. Freya had made Martin promise not to see her again. It was for her safety, she had told him. But it was for his own life that she feared. The boys might wait for him again next time they would have their plans made

"I'VE ALWAYS LOVED YOU" But finally a day came when the longing to see him could be borne no longer. She left the house one morning and made her way to his place in the moun-

He was lighting the stove in the great kitchen and when she suddenly appeared in the door, he caught his breath for a sec-

"Martin," she faltered going towards him.

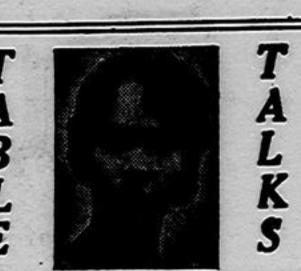

Awkwardly, he stood straight and still. Then his arms opened for her hungrily and she came to him with the light of love in her eyes. "I never thought there was a chance," he said huskily, "Ah, Freya, dear heart . . ."

"My darling." Her eyes were large and luminous. Yes, he was more than friend and brother. He was the beloved sweetheart of her dreams. "I've always loved you Martin - I know."

(To be continued)

Why Our Coins Have Thick Edges

We may not have noticed that most coins have thick edges. We can see this best in new coins. for as they are used the extra thickness-that is, the raised edge all round on either side - gets worn down, and the design is also worn. This explains the reason for the raised edge, which is to protect the design from getting rubbed away as the coins knock one against another while in general use. This thickening of the edge may seem a small thing, but were there no thickening the design would disappear in prob-

MORE REQUESTS

I have been wondering this week just what I should write to you in order that you might have some last-minute helps on your conserves and pickles. I wished to give you (without repeating myself) recipes that would be practical and helpful in conserving everything possible from your garden or from the market in order that you might be able to fill every jar.

In the midst of this pondering I received several requests all in a bunch, which solves my problem and here is hoping, this week they may solve yours:

Corn Relish 12 ears corn 1/2 cabbage 2 large onions

1 green pepper 2 stalks celery hearts 3 cups vinegar 1½ cups sugar 2 cup flour

3 tablespoons salt 1/4 teaspoon mustard One-eighth teaspoon cayenne 1/4 teaspoon tumeric

Cut corn from the cob. Chop cabbage, onions, pepper, combine with corn. Put all the vegetables into a kettle and pour over half of the vinegar. Mix the dry ingredients and add the remaining

vinegar. Combine the two mixtures, bring to the boiling point and cook slowly for 40 minutes. Pour into clean hot jars and seal at once.

Red Cabbage Pickle 1 red cabbage 6 medium sized beets 1 cup horseradish ½ tsp. cayenne

1 cup white sugar Salt to taste Chop cabbage and beets, heat vinegar, add sugar and spices; add to beets and cabbage. Place

in crock or bottles and seal. Pear Conserve 8 cups pears

3 cups sugar 1/4 cup preserved ginger 1 cup pecans or walnuts (chop-

1 lemon

Prepare pears, peeling and coring and dicing; then measure. Combine pears, sugar and ginger and let stand for 2 hours. Boil for about 15 minutes or until fruit looks clear.

Add nuts and lemon, which have been put through food chop-Cook for 30 minutes. Pour

into glasses and paraffin at once. Grape Conserve

5 lbs. grapes 5 lbs. sugar

1 lb. raisins

3 oranges 1 cup chopped walnuts Separate skins and pulp of

grapes, cook pulp and run through a colander to remove the seeds. Cut rind of oranges and run through meat chopper after having extracted the juice. Cook alltogether until thick, then add 1 cup chopped nuts. Boil ten minutes. Pour into hot jelly

glasses and seal. Five Fruit Sauce

20 tomatoes (medium) 6 apples

6 pears 6 peaches

1 pint pitted plums 3 red peppers

5 cupfuls sugar 2 sticks of cinnamon

1 tablespoon whole cloves 1 tablespoon mixed spice

1 tablespoon salt 1 quart vinegar Boil for 2 hours; makes 6 pint jars of sauce.

Revival Seen Of Needlework

The Gentle Art, One of the Main Leisure Time Activities In Colonial Days, Is Again Popular Among the Women-

The revival of the gentle art of needlework, a favorite colonial leisure activity, is becoming more widespread, according to Walter Storey, of the New York Times. Every group has its enthusiasts, apparently; women for the most part, but including some men. Something of the scope and delicacy of their work on furniture coverings, bedspreads and hangings is suggested in an exhibition of the results of the "America Through the Needle's Eye" contest.

HOOKED RUGS, PETIT POINT Hooked rugs, petit and gros point chair coverings, hangings, patchwork spreads and tablecloths, both embroidered and crocheted, bear witness to unusual skill and patience in wielding hook or needle. Old-fashioned afghans are a feature and even embroidered towels are included in this careful selection of the work of contestants from North Dakota to Connecticut,

The highly decorative appearance of most of the pieces suggests that these amateur needleworkers have a greater knowledge of design than is generally supposed. Even when a subject so prosaic as a map is selected, as it was by a needlepoint expert who pictured the islands of the Caribbean, the variation of color and textures produces a most attractive result. Again, in a quilt whose patchwork forms a map of the United States, the color harmony of pastel yellows, orange and beige gives it distinction and suggests its use as a bed covering for a boy's room or a wall hanging for

Demand Heavy For Chemists

War Program Results In Flood of Requests at Ottawa

So great has been the demand for chemists, due to acceleration in the Dominion's explosives and chemical production, that there are now very few unemployed chemists, Dr. H. M. Tory, head of the technical section of the Voluntary Service Registration Bureau, said last week at Ottawa.

Requests for chemists have been flooding the Ottawa bureau. and in an effort to meet the demand, the technical section has circularized chemists working in other industries to determine their willingness to change their place of employment to help in the war program. The majority of them have expressed willingness to do so.

The bureau continues to receive requests for other skilled workers who have offered their services in the expanding war effort. Requests have been mostly for electrical engineers, particularly those in the radio field, and mechanical engineers. The bureau has a list of some 15,000 engineers in all branches from which to call as the need arises.
