POETRY.

HIRK AND CRGAN.

BY F. WELLESLEY PORTER. The organ's music grandly floats, Join'd by a hundred waiting throats; To God ascends the hymn of praise, As oft it did in primal days: Though organ's music fills the air Our auld Kirk's HEART still lingers there Our early fathers made the choice Of sweeter sounds than human voice; Did David's voice alone impart That simple melody of heart? No! Israel's Psalmist did salute The Lord of lords with harp and lute And sang to Him those sweet, sweet psaints

Mingled with sound of harps and shawms. Was David's praise less real because He joined the harp's with his own voice? Ah no! we know that God approved The psalms and chants of him He loved; That heaven's high King inclined His car. That earthly king's sweet praise to hear; If David's ways were ways of grace Why may not we his footstaps trace? If he, the "man of God's own heart," With tinkling cymbal played his part, Why may not we, as earnest, real, The same God praise with organ's peal? Our fathers, such as good John Knox, Were not one whit more orthodox Than we, because they lov'ed bare walls And made their temples nature's halls; Theirs was an age distinct from ours: To guard against Rome's errant powers Was their great aim, and rightly so, To stem vain pemp's unbridled flow; All honor theirs—the stand they made

The unyielding front those saints displayed, Has won our rights, free worship gained, And freedom of thought and speech obtained Twas well, in those old times so dark, To draw a wide, discerning mark Twixt those vain rites which Rome defends And that true Church so lately cleansed; But, searching all the Scriptures through-As Scripture teaches all to do-We full to find a single verse, Howover short, obscure or terse. Containing sentiment therein Which proves the organ's voice a sim Then let us praise, at morn and even, The Greet High Priest of earth and heaven;

Unto the Lord, who bends His car, Our swelling songs of praise to hear,

Nor praise him only with the voice,-

As Miriam did let us fejoice;

With instrumental music blend,

Whene'er hearts in praise ascend

Balt and its Value

Agenta for the Grey Review.

Salt is frequently mentioned in the Bible. The sacrifices of the Jews were all seasoned with salt, and we read of a covenant of salt. Salt was prosured by the Hebrews from the hills of sait that lie about the southern extremity of the dead sea and from the waters of that sea, which overflow the banks yearly, and leave a deposit of salt both abundant and good.

Among ancient nations salt was a symbol of friendship and fidelity, as it is at present among the Arabs and other Oriental people. In some Eastern countries, if a guest has tasted salt with his host, he is safe from all enemies, even although the person receiving the salt may have committed an injury against his entertainer

to the Saviour, whom she had so long neg- including the raspberry, blackberry, and were admitted to be the best for general little raised. The persons of greatest conlected to confess before the world. In the winter- waters of the sea appear to have been its may seem to you at first.'—Christian In- or permitting it very slowly. This is the house the temperture was kept at 45— first great magazine. It is found there point generally overlooked-namely, the thoroughly dark. In Cyprus they keep dissolved in certain proportions, and two ground. So much less water also may be | ing to the population. From what he | servation of that vast body of waters, which used, keeping the ground always mellom knew of the business, he was thoroughly otherwise, from the innumerable objects of and making mellow where rough and hard. convinced that Canada was as good, it not animal and vegetable life within it, would The secret is, the sun cannob evaporate the better than any other country, because in become an insupportable mass of corruption moisture nor bake the ground; hence, can. Canada the bees could be kept on very and the supplying of a large amount of the not deprive it of its votile fertility. We little stock; as a feeding ground Canada salt we require in our food, and for other see this in a fallow that is thoroughly work- possessed many advantages; the basswood purposes. The quantity of salt contained ed. The soil retains longer its moisture, tree produces honey from twelve to fifteen in the sea (according to the best authoriand is cooler, the mellow surface occassion- days; in other countries they dont have ties) amounts to four hundred thousand ally stirred acting as a dead air chamber that tree; the first honey extracted was billion cubic feet, which, if piled up, would or non-conductor of heat, causing the fer- from the willow early in spring; then the form a mass one hundred and forty miles brothers and sisters to be reared by his motilizing elements to remain, instead of fruit blossoms, then dandilions, white clovlong, as many broad, and as many high, or ther, who kept a small country hotel. The evaporating, as they would if heated and er, wild berries, Alsike clover, basswood, otherwise disposed, would cover the whole Conadian thistle and the fall flowers; from of Europe, islands, seas and all to a height

If salt, however, were only to be obtained from the sea, the people who live on immense continents would have great trouble in supplying themselves with it; and here over the comfort of human creatures, for nature has provided that the season leaving these continents, all of which were once overspread with it, should deposit vast quantities of salt, sufficient to provide for the necessities of the inhabitants of these parts. In some parts the salt is exposed on the surface of the ground in a glittering crust several inches thick; in others, thick layers have been covered over with other substances, so that salt now requires to be dug for like coal or any other mineral. Salt is found in this last shape in almost every part of the world : though in the vast tarmer could make as much as he could off empire of China it is so scarce that it is smuggled into that country in large quantities: - Harper's Young People:

......

to have for years, any accurate statistics of

the population of the interior of Africa there is very little doubt that we have greatly underrated it. Much important information has lately been gathered on the subject, especially concerning the distribu tion and density of the inhabitants or that far off land. In the great lake district; for instance, there are territories as thickly settled as many of the Puropean States, relatively small areas containing millions of people. The negro regions are by far the most thickly populated; while the desert portions are the reverse. A French geographical society gives the estimated figures of various subdivisions of that con tinent as follows :- In the Soudan the population is 80,000;000, or about 35 persons each square tnile. The town of Bida; on the Niger, for instance, contains fully 90. 000 inhabitants. East Africa is rated at 80,000,000; and equatorial Africa at some 40,000,000 souls. A late authority on ethcally 180,000,000: the Hamites, 80,000 the Bantos, 13,000,000; the Foolahs, 8, 060,000; the Nubians, 1,500,000; th Hottentots; 60,000-making a total of 172. 500,000. These figures-only approximate of course-are considered too low both by German and British geographers, the for mer estimating the population as high as As Ambassador, at St. Petrsurg, Lord 200,000,000.
