Take 24 gallons of water, 12 lbs, of proportion according to the quantity of eggs to be preserved. Stir several times daily and then let stand until the liquor has settled and is perfectly clear. Draw off carefully, dip off the clear liquid, leaving the sediment at the bottom. Take for the above amount of liquid 5 oz each of baking soda, cream of tartar, saltpeter and borax and an cunce of alum. Pulverize and mix these and dissolve in one gallon of boiling water and add to the mixture about 20 gallons of pure limewater. This will about 20 gallons of pure limewater. This will about fill a cider barrel. Put the eggs carefully, so as not to crack any of th shells, letting the water always stand an inch above the eggs, which can be done by placing a barrel head a little smaller upon them and weighting it. This amount of | N keeps bottle on hand all the time. not necessary to wait to get a full barrel or smaller package of eggs, but they can b put in at any time that they can be obtained fresh. The same liquid should be used only once.

Dairy Notes. In buying a dairy cow from a dairyman,

it is safe to not take the seller's pick of the The strong claim of the Jersey cow fine butter in large quantity economically

The cow is the farmer's machine for manufacturing dairy products; therefore he cannot know too much about her.

Kindness helps to create a quiet disposition, so important in a dairy cow, and this education must begin when the calf is young-any habits acquired when young are apt to cling to the cow when grown. Butter color properly used pleases the eye of the consumer, and prepares him to enjoy his butter, which, other qualities being found tolerable, he does. If your butter comes on the market white, the consumer won't bay it; so, however good it may be otherwise, it goes into the "soap-grease."

The key to the whole situation of successful dairying lies in good grass ground Unless the ground is well seeded, fertilized, occasionaly, cultivated and favored by keeping too much stock off it, the best crops cannot result, and poor crops reduce the output and income. There ought to be systematic care in growing grass as much as in growing grain or other crops. Every time a cow shivers she takes another mouthful of fcod to produce extra caloric. She also gets into a way of doing instead of costing extra hundreds weight

of food consumed.

There is a manure that combines the Chronicling some of his more remarkable three elements, nitrogen, phosphoric acid, feats one of his friends says : " Not only with tariffs of fees.
