### An Essay on Man.

Man that is borne of a woman is small potatoes and a few in a hill. He rises up to-day and flourishes like a weed, and tomorrow or the next day, the undertaker hath him. He goeth forth in the morning warbling like a lark, and is knocked out in one round and two seconds. In the middle of life he is in debt, and goeth. The banister of life is full of splinters, and he slideth down with considerable rapidity. He walketh forth in the bright sunlight to absorb ozone, and meeteth the bank teller with a sight draft for \$357.

the wheel barrow in his path. It riseth up and smiteth him to the earth, and falleth non him, and runneth one of its legs into In the gentle spring time he putteth on his summer clothes and a blizzard stricketh him afar from home and filleth him with cuss words and rheumatism. In the winter

he putteth on winter trousers, and a wasp that abideth therein createth excitement. He starteth down into the cellar with an oleander and goeth backward, and the leander cometh after and sitteth upon him. He buyeth a watch dog, and when he cometh home from the lodge the watch dog treeth him and sitteth near until rosy morn. He goeth to the horse trot and betteth his money on the brown mare, and the bay relding with a blaze face winneth. He marrieth a red headed heiress with a wart on her nose, and the next day the parental ancestor goeth under with a bump and after a brief sojourn in the gaol cometh ome to live with his beloved son-in-law.

WHAT A STUDY OF LLYOD'S STAT

ISTICS SHOWS.

WARD, 8 Quimby Yessels Belonging to the Inited King-

> The statistical summary of shipping osses during 1894 issued by Lloyd's Register of British and Foreign Snipping sets forth certain facts that should gladden the hearts of shipowners, and all those who go lown to the sea in ships under the British flag, whether as crews or passengers, says the Liverpool Journal of Commerce. Still,

"What's the matter?" he called out. | ships making passage after passage at a | "Four o'clock ! Four o'clock !" came speed, and with a regularity bordering on the landlord's voice from the other side of the marvellous. Such splendid specimens monthly boats under foreign flags ought to show a smaller percentage of loss, caeteris paribus, than the leviathans whose passages

THE NEAREST SECOND have more losses than the English. Statistics are altogether opposed to this view, which is a discreditable reflection upon the ships and their navigators under the altogether to be attributed to better education or better seamanship. Our carrying craft as a general rule, to which every year there are fewer exceptions, are majority of the Norwegian wooden vessels. -Moreover, they frequently carry larger crews than the foreigner. It is just possible that the superior education of the Norwegian officer and seaman prevents an even more unfavorable comparison for ships of their fatherland. This inference seems borne out by the fact that of the merchant navies having a total tonnage of over a million, the United Kingdom, the British colonies, the United States of America, France, Germany and Norway, as regards steamers, the average percentage of loss for the six countries is 2.3, whereas the percentage for the United Kingdom stands at 2.33. Hence, given better ships, apparently the higher education stand a better chance of coming to the front. For sailing vessels the six countries gave an average percentage of 5.5 against 39, for the United Kingdom. Inquiries into

are seldom worth the trouble taken with them. The principal witnesses are full Those who believe that loss of life at sea is on the increase will not find it an easy matter to account for the persistent de crease from year to year of the vessels belonging to the United Kingdom which are abandoned, are missing, or founder. In 1891 such vessels were shown as 62 in 1892 as 68, in 1893 as 62, and in 1894 as only 47. There is decidedly room for congratulation under this head. Strandings are, as ought to be expected, the most prolific source of shipping casualty. Fog shuts down till the watch is about to be relieved Apple Trees hardy as oaks, "Excelsior" and all hands on deck before taking a cast only with a general chart of most intricate passages where too refined detail would be impossible. He either allows too much for the sea surface, or not enough ; or he may allow exactly what is laid down on the chart, based on insufficient information only to find his vessel piled up and the current running by her in just the opposit irection to that which the current chart led him to make the allowance he did Shipmasters condemned by a court of en. quiry for neglect of currents should take care to find out whether the nautical assessors always have the latest and most reliable information before them. No less than forty-two per cent, of the casualties to steamers, and 48 of sailing vessels, are attributable to stranding. In the days to come this should increase, even though the absolute number of casualties decrease. Ships must of necessity become safer as the knowledge of

FLOATING STRUCTURES is more extended, but accidents cannot possibly be provided against altogether. Coral reefs are growing continually in some parts of the ocean, solitary rocks crop up in the Red sea and elsewhere not far from the tracks passed over by hundreds of fine ships, weather forecasting has not yet arrived at a state of perfection in any part of the world so that the shipmaster may put to sea confident of clear weather, and stranding will always form a considerable percentage of the disasters to ships. Steamers and sailing vessels carrying badly stowed cargoes of grain in bulk are always iable to a short shrift, and apparently the courts of inquiry are not always capable of determining right off a ship's stability, having given precisely similar information to that supplied the shipmaster. Collision again is another frequent source of disaster or the steamships. Much has been written to warn the navigator of the risk attending an attempt to manœuvre in a thick fog by locating a sound signal. Too often the action resolved upon precipitates the very collision it was adopted to avert. Time is so short for decision even in clear weather that the officer of the deck needs to have all his wits about him, and be always well in evidence on a steamer's bridge. Taking everything into consideration this summary of losses for 1894 clearly shows, if any evidence were wanting to that effect, that there are not any ships of the world's merchart navies so safe as those belonging to the United Kingdom.
