

Newspaper Laws.
 We call the special attention of Postmasters and subscribers to the following synopsis of the newspaper laws:

1. If any person orders his paper discontinued, he must pay all arrears, or the publisher may continue to send it until payment is made, and collect the whole amount whether it be taken from the office or not. There can be no legal discontinuance until payment is made.
2. Any person who takes a paper from the post office, whether directed to his name or another, or whether he has subscribed or not is responsible for the pay.
3. If a subscriber orders his paper to be stopped at a certain time, and the publisher continues to send, the subscriber is bound to pay for it if he takes it out of the post office. This proceeds upon the ground that a man must pay for what he uses.

S. G. REGISTRY OFFICE. Thomas S. G. Registrar. John A. Munro, Deputy-Registrar. Office hours from 10 a. m. to 4 p. m.
 Nearly three minutes are required to bring a big steamer, like the Etruria, to a full stop; and in that time she will have advanced almost half a mile from the place she was when the first movements were made to stop her.

THE FARM.
GROWING WOOL.
 The sheep to a greater extent than any other of our domestic animals is a double producer. Its two products are in no way incompatible. The best wool is grown at the same time we are producing mutton. But so much stress is being put upon the latter that the wool product is largely dismissed from thought.
 The nature of wool and the conditions of its growth should be understood. A fleece of wool is far more easily damaged in the process of making than the carcass, yet as a rule flockmasters give no more thought to the growth and protection of the fleece than they do to the growth of hair upon cattle. It is considered a purely incidental product. Even at present prices it deserves better consideration than this. And we have no doubt that we may expect better prices another year for our wool.
 With great depression in the price of wool the world over and the consequent decline in the number of sheep, the supply must soon drop below the demand. If farmers and flockmasters wish to come in for their share of the benefits of a rising market they must be prepared to meet it with a superior product. At present our home market is gradually slipping away from us, not so much because better wool or cheaper wool can be found, but because wool in better condition can be found.
 We think it safe to say that under our system of smaller flocks and regular feeding we can grow better wool, even finer, than can be done in what we consider more favored countries. The wool there are far more at the mercy of the seasons. The fibers of the wool record the fluctuations in food and temperature, but shrink in diameter. As these fall the fibers continue to grow in length, but shrink in diameter, thus making a weak point. The old adage that a chain is no stronger than its weakest link applies to wool. These "breaks" in the fibers, as they are called, are a source of great loss and annoyance to manufacturers. In these breaking down of fibers in the year possible to prevent breaks in occasional fleeces, as any severe shock to the system may cause them. Severe fright to result in broken fleeces.
 But, having accidents, reasonable care will secure a uniformly strong-fibered many "breaks" are attributable. The result from allowing the pasture fields for support and in some cases exposure to severe storms. A single exposure may damage the fleece beyond repair. Loss of weight in fat and flesh can be regained, but a weak point in the fleece cannot be repaired in any way. The safe way is to keep the grass and grain feeding over and other the up to winter quarters strong and accustomed to eating grain, and then no fluctuation in their physical condition to record in the wool fibers.
 It may be asked here if high feeding is compatible with the production of the highly fed breeds at England, which course wool and the great mixture of Spain that gathered their sustenance from the finest growths of grasses developed the finest fleeces in the world, were no accidents. Just now the conditions of their existence determine the character of their fleeces in the conditions of their existence is a very large factor.
 Constant attention to selection might counterbalance the tendency to produce coarse fiber under high feeding, but being are selected in this country the tendency will be toward the production of a coarse-fibered fleece. While now excepted of fiber is limited demand, the fineness of fibers throughout the fleece is not to be deplored. With the uniformity of fibers throughout the fleece, uniform strength throughout the length of the fiber, and freedom from foreign matter, that make a fleece valuable.

LONDON'S RAILWAYS.
Deep-Level Tunnels for Electric Lines—Efforts to Relieve the Streets of Their Congestion.
 A despatch from London says:—A meeting of the Metropolitan District Railway Stockholders' Association was held on Friday in furtherance of the project for constructing two deep-level tunnels for an up and down service of express electric trains between Earl's Court and the Mansion House. The stockholders have endorsed the action of their directors in approving the scheme, and at the necessary powers will be asked for at the coming session of Parliament. That they will be granted is a foregone conclusion. The project will be the seventh to ask for powers to assist in solving the annually increasing difficulties of London's traffic. The attempt is being made in every direction. Certainly not for many years has London witnessed so great an activity in railway planning. It is necessary to metropolitian railway was sanctioned by Parliament, to find anything like bid fair to make a railway under every important artery of the metropolis. Parliament has already sanctioned six metropolitian underground projects. Two will be sanctioned at the forthcoming session. There are still others in the air.
 Most of these lines are planned to rectify the extraordinary want of forethought which practically forbade the erection of the great railways to advance beyond what were, in the days of their infancy, the suburbs of London. The result of this policy has ever since been that the traveler consumes as much time in getting from one terminus to another on the other side of the metropolis as would suffice to carry him 50 miles of his journey. In London to-day, although served by numerous omnibuses, and tramways in the most perplexing of the world's cities, it is still impossible to travel, in any way, in less than an hour, and often in two hours, between one part of the city and another. The new projects, which add 45 to the metropolitian railway network, are those nearest completion, and are those nearest completion, the Central London Railway, which follows that main artery Chancery Lane, and Oxford Street, from Park, and thence to Shepherd's Bush. The next most important are the two lines for which Parliamentary powers will be asked at the session.
NEXT SESSION
 The deep-levels of the district above referred to, and the line which starting from the Bank, will follow the Strand to London and the Strand to London. An incidental advantage of the new project is connected with the connection to build connecting side, the new Victoria Street, Chancery Lane, and King William Street, Lombard Street, and the Strand, which will be a great benefit to the city. The next most important are the two lines for which Parliamentary powers will be asked at the session.
FARM NOTES.
 When prices are low it may be due to causes which will soon pass away. At this season many farmers sell in order to realize cash to meet obligations and to avoid storage during the winter, hence the bulk of crop is now moving and prices will be better later on, as the markets will not then be so liberally supplied.
 How much an acre will produce depends upon climate, fertility of soil and other circumstances. In Switzerland an acre keeps five cows, which are on the soiling system. In Japan a five-acre farm is considered a large one. In this country in the growing of truck as much as \$600 has been made in a year from an acre where the land was near a large market.
 When fruit or vegetables are sent to a commission merchant and are not in perfect condition he is compelled to sell as soon as possible to avoid deterioration in value, but when the fruit arrives in good condition he can hold for better prices. The proper shipping of perishable farm products to market in which much of the profit is produced is not thoroughly understood by the farmer. Cease old methods on the farm that have proven unprofitable. Don't continue in the footsteps of your father unless it pays. Conditions change yearly in important particulars, both in market demand and methods of production, and you must keep pace with them. This can best be accomplished by keeping in touch with the world through the columns of reliable publications of frequent issue, and the exercises of trained judgment aided by thoughtful reading.
 It is difficult to procure wood ashes that have their full strength of potash. Ashes absorb moisture, which adds to their weight, and in buying them this should be overlooked. The fact that ashes have caustic qualities and indicate when placed to the tongue is not leached by rains, as a portion of the potash always remains. One of the substances which largely predominate in ashes is lime, and ashes will give satisfactory results sometimes due to

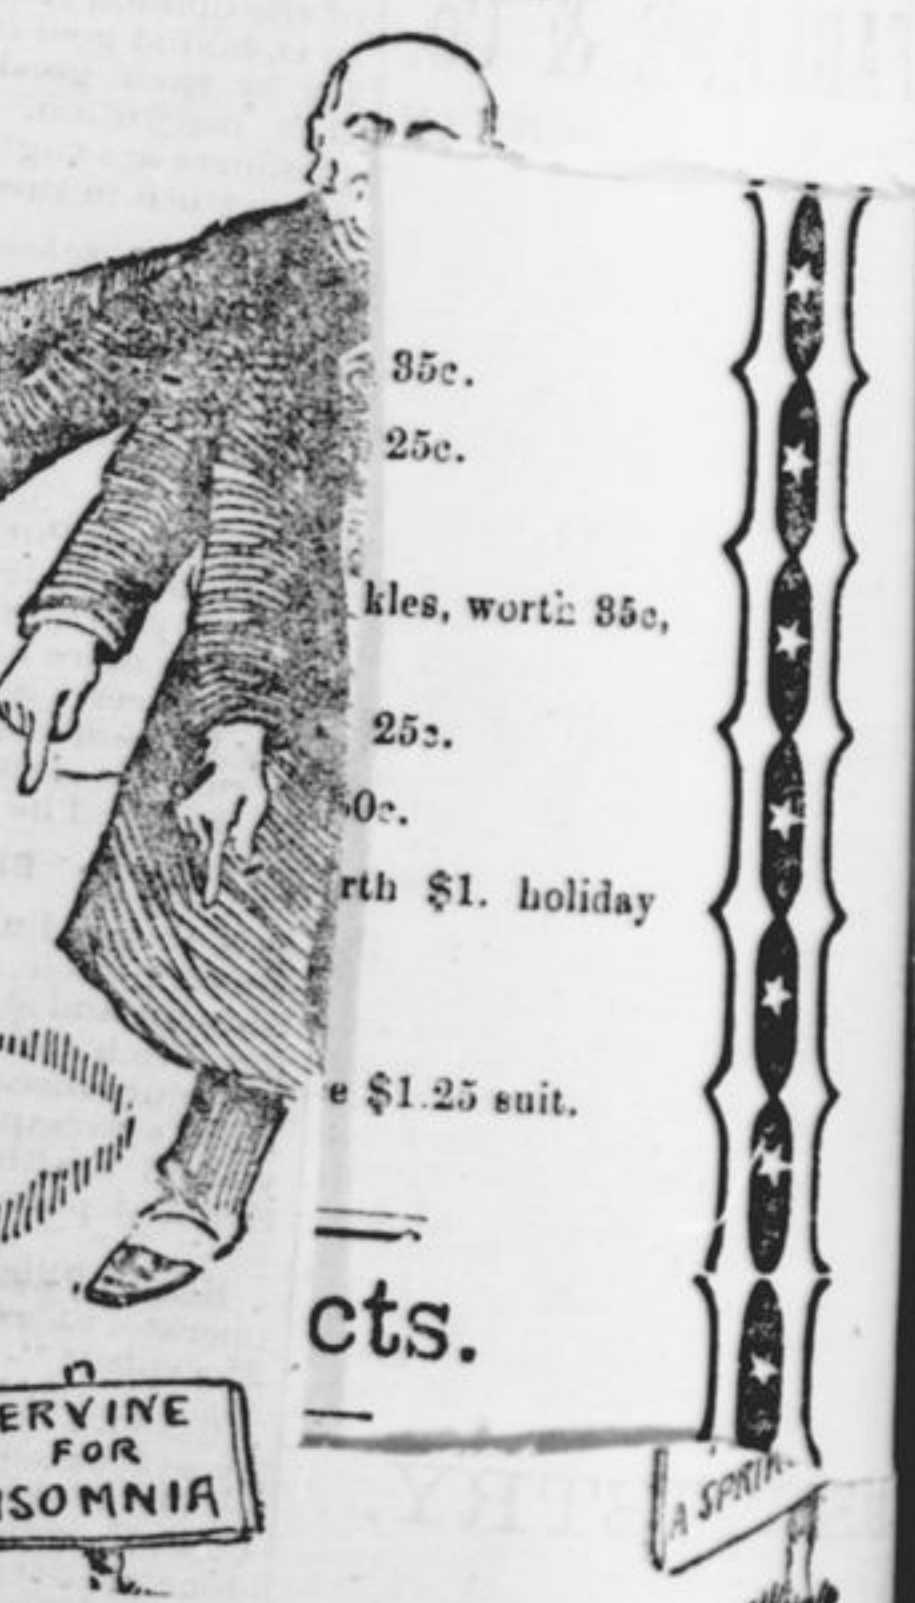

WOMAN CHASED BY DOGS
OFFICERS USE BLOODHOUNDS TO CAPTURE HER.
 An Eighteen-Year-Old Girl Desperately-Mariah White, a Child of the Moon-tains, and Her Deeds of Deviltry—Mad Bone Time in a Chattanooga Gang.
 For the first time in the history of the state of Georgia a white woman has been hunted and chased down by bloodhounds.
 This woman is known as Mattie White, and the immediate cause of her arrest was the attempted murder of a white man named William Mason a young merchant in the suburbs of Rome, Georgia.
 The immediate assassin of Mason was a negro, but it was soon learned that he was only a tool of Mattie White, and the object of Mason's attempted murder was revenge.
 Mason's brother had testified against Mattie White in a criminal proceeding against her, and it was the brother who was marked out for assassination. The negro made a mistake in the darkness and shot the wrong man.
 Mattie White is simply an exaggerated type of the depraved white people who live in the hills about Rome, Ga., called the Lavender Mountains. She is about nineteen years old, and in spite of the exposure she has incurred in her half savage life, she has a certain kind of wild beauty. Her complexion is fair, her eye clear and keen, and she is remarkably beautiful hair.
 She is the daughter of an old county officer who died several years ago, leaving a widow and six young children. Mattie being the oldest and at one time the youngest of the children. Her mother bore a very
UNSAVORY REPUTATION.
 and finally became insane from the effects of evil life, and was sent to an asylum.
 Mattie got a home in a respectable family by the name of Harbour, but she showed her vicious tendencies by running away and taking up with a white do farmer, who had a wife and child of her own. She was only about thirteen years old at that time, but she soon acquired a name that made her a terror to the community.
 The old woman regained her reason after a year or two and was set at liberty. She came back and took up her abode with Mattie in a one-roomed log cabin in the Lavender Mountains. There the two lived in the most primitive and toughest characters until for a number of years ago, when they were discovered and taken under arrest.
 The mother was released and died soon after, but Mattie was sentenced to the chain-gang. Out of pity for her youth and friendless condition she was allowed to remain in the common jail for some time, and was afterwards released on a promise to reform. Soon after her release she took up her old habits and was again arrested, and after being confined in jail for some time was tried, convicted and sentenced to one year in the chain-gang.
 The man in the case paid his fine and escaped the chain and stripes.
 Mattie had a big time while in the chain-gang. Her associates were the toughest white men and the lowest class of negroes in all this mountain region. Being the only white woman in the prison she was the center of attraction and a place of frequent occurrence in that region. She would dance all night, and where she would creep into her cell, and sleeping as innocently as if nothing had happened.
 At last she was detected, and when the superintendent asked her why she came back she laughed at him.
 "Why, you would be crazy!" she said. "I have a better bed here, and more to eat, than I would in my cabin. I'd be too hot to come back."
 Along in September some benevolent people learned that she was the only white woman in the chain gang and they interested themselves in her release. She was back at her old tricks and was surrounded by a gang of the worst characters in that section of the country.
 The suburbs of the city began to be infested with
HIGHWAYMEN AND THUGS.
 and the police and county officers were unable to do anything with them. Hold-ups frequent, and the same description of the principles in many of the highway robberies. He and Mattie had been in the habit of frequenting the region. She would dance all night, and where she would creep into her cell, and sleeping as innocently as if nothing had happened.
 At last she was detected, and when the superintendent asked her why she came back she laughed at him.
 "Why, you would be crazy!" she said. "I have a better bed here, and more to eat, than I would in my cabin. I'd be too hot to come back."
