

Newspaper Laws.

We call the special attention of Postmaster and subscribers to the following amendments of the newspaper laws:

1. If any person orders his paper discontinued, he must pay all arrears, or the publisher may continue to send it until payment is made, and collect the whole amount whether it be taken from the office or not. There can be no legal discontinuance until payment is made.

2. Any person who takes a paper from the post office, whether directed to his name or another, or whether he has subscribed or not is responsible for the pay.

3. If a subscriber orders his paper to be stopped at a certain time, and the publisher continues to send, the subscriber is bound to pay for it if he takes it out of the post office. This proceeds upon the ground that a man must pay for what he uses.

ALLAN MCFARLANE, Proprietor.

THE FARM.
DRESSING POULTRY.
Properly dressed poultry commands a much better price than those indifferently prepared for market. There is a knack in dressing poultry. Experience will soon prove that it pays well to take pains to ship dressed poultry in the best possible manner. F. Greening gives the following advice on dressing poultry: First of all, crops of fowls to be killed for market should be entirely empty. A mistake is generally made by not hanging the fowl up while stripping off the feathers, but with the other. One can work rapidly when the bird is hanging, as both hands are at liberty. The outside, a transparent outside covering of the fowl, is very easily injured, particularly of a scalded bird, and when the bird is held while picking it this membrane is often rubbed off in spots and although this injury does not seem much at first, afterward does not seem much dark giving the bird an unsightly appearance. Over-scalding also loosens the outside, therefore we should exercise great care not to keep the birds in hot water for too long a time when scalding them. Have the water at a boiling point, yet not actually boiling. Take the bird by the head and feet and immerse it, lifting up and down in the water three or four times; then hang up by the feet. The head should never be immersed, as it turns the comb pale and gives the eyes a shrunken appearance. Now remove all the feathers, letting the small ones drop into the barrel beneath and keeping wing and tail feathers by themselves. The small feathers may afterward be spread out and dried, if deemed of value. The feet of all fowls should be scrupulously clean; wash or still better, brush them. I have seen the advice given to scald the feet and then skin them, but I never practiced this myself. All clotted blood should be removed from the mouth and all traces of blood washed from the head. To give scalded poultry a better appearance it should be "plumped," after being plucked clean dip for two or three seconds into hot and nearly boiling water, then at once into cold water, then hang it up to dry and cool. The animal heat should be all out and the fowls perfectly dry before packing. Do not use new white paper; it will pay. Have some clean, bright straw or swale hay in the bottom of the boxes, and pack poultry back up, legs and necks under, snugly so that they may not shake about in transit. Straw may be used between the different layers, and also on top before putting on the cover. With ducks and geese I have had but little experience, but good authorities say they should be scalded like other poultry, then wrapped up in a cloth for two or three minutes and let steam. Thus treated the down will come off with a better appearance when dry plucked. Although most people think that dry picking is the best, it is not so. When first done, there is little difference. Hang the live bird up as in the case of scalding, with legs pretty well spread apart. Kill with a sharp-pointed knife, cutting across the roof of the mouth. If the cut is made right it should bleed freely. Now run the knife up into the neck and relax the muscles; the feathers will then come out easily. Before scalding any further, attach a small weighted pill, well weighted down, to the lower part of the fowl's bill, adjust this as quickly as possible. It is better for two persons to work together, possible space of time. If one is slow and then another may become set, tearing the skin. Should one be so unfortunate as to tear the skin of a fowl, when one has a good deal of poultry ready to dress, it will be found of advantage to have a room for that purpose. A lean-to to the henhouse will be furnished with a skylight, if this is better. It should be light, all the way down to the water, and large enough to warm the room as well as to keep the water hot for scalding or other purposes. The floor should be smooth and tight. A scalding should be put across the room at a convenient height, with a few spikes driven in to hang the birds while dressing; another set of two along the sides to hang the dressed poultry to let cool and to greater part of the season, this room may be used for storing feed, chicken cooping up potatoes, and other vegetables for the fowls, etc.

CARING FOR THE CALVES.
This question should receive the especial consideration of farmer and dairymen at this time of the year. During the warm weather the principal question is one of proper feed but now along with the question of a different method of feeding the calves, which have outgrown the diet of plain milk. Much of the vigor and growth attained during a summer and fall of generous and intelligent feeding may be lost during the winter months. The idea is to keep the calf thrifty and growing from the date of birth until it takes its place in the dairy herd. If this has been the aim since the calf was dropped, the question now is, how are we to handle the youngster so as to have it come out in the spring still growing, and suffering from no lack of food from indolent care. In the matter of feed the younger calf of course will receive its skim-milk, properly warmed and at regular hours, any one

H. A. Tremayne, who has returned to Winnipeg from the Klondike, said that gold is not uncomfortably plentiful there. You can't make \$1,000 in a day, or even a week.
W. Bowell, postmaster of Tweed, tried to climb into his hayrack with a lamp in his hand. He fell, and though, fortunately, the lamp went out he broke his shoulder.
A new species of agricultural thief has been developed near Galt. He hires out to a farmer, stays long enough to get familiar with the surroundings, and then decamps with all the farm implements, except the mortgage.
IN A DEPARTMENT STORE.
Proprietor—We think of opening a hospital on the sixth floor.
Friend—A hospital?
Proprietor—Yes. Customers injured in bargain rushes will be treated free.
The quality that in a man is admired as firmness in woman is spoken of as continuity, and in children is punished as obstinacy.

A STORY ABOUT NELSON.

How His Career in Life Was Very Nearly Changed.
A pretty little romance gives Nelson's memory a sentimental interest in Canada. During his service at Quebec, in 1782, when he was but twenty-four years of age, he became infatuated with a beautiful Canadian girl, Mary Simpson, daughter of a great Canadian merchant of the period. At the time of Nelson's visit she was but sixteen years old, marvellously beautiful and witty. On October 14, 1782, Lord Nelson's ship, the Albemarle, was ready to sail, and he had a very sad and tender parting with Mary Simpson, and went down the St. Lawrence to board the man-of-war. The next morning arrived and the Albemarle did not leave anchor, and Captain Nelson was seen coming back to Quebec in a boat. A friend of Nelson's, a man prominent in Quebec at the time, espied him, and asked him what had happened. Nelson is quoted as having said: "I find it absolutely impossible to leave this place without again waiting upon her whose society has so much added to its charms, and laying myself and my fortune at her feet." Nelson's friend protested against such a rash act, and told him that, "situated as you are at present, your utter ruin will inevitably follow." "Then let it all be resolved to do it," for I am resolved to do it," he replied, "my friend prevailed, and he was fairly carried back to his ship, and he was many years before he gave up the hope of possessing her, for Nelson never returned to Canada, and Mary Simpson died in spinsterhood.
HER METHOD.
Uncle Bob—Yes, my wife alius believed in tyin' a string to her finger to remember things.
Uncle Bill—She has one on her finger most of the time, I notice.
Uncle Bob—Yes, 'ceptin' when she has somethin' very particular to remember. When she leaves off the string, an' then it ain't there she remembers why.
However, unfortunately a woman's love affairs may have been, she never despairs of meeting an ideal lover, even though she live in a desert.
THEY COUNT BY THE SCORE
Yea, By the Hundreds, Those Who Have Been Cured of Dire Disease By South American Nervine.
A Remedy Widespread and Universal in Its Application.
Where Other Medicines Have Failed and Doctors Have Pronounced the Cases Beyond Cure, This Great Discovery Has Proven a Genuine Elixir of Life.
The Same Verdict Comes From Old and Young, Male and Female, Rich and Poor, and From All Corners of the Dominion.
If it is the case that he who makes two blades of grass grow where only one had grown before is a benefactor of the race, what is the position to be accorded that man who by his knowledge of the laws of life and health, vigor, weakness and strength where labor, energy and anticipation of an early death had before prevailed? Is he also a public benefactor? Is he one who have been used and are now through the use of South American Nervine give their opinions on the subject. John Boyer, banker, of Kincairdine, Ontario, had himself a hopeless invalid through years of overwork. At last he felt his case was hopeless, for the best physicians had failed to do him good. He tried Nervine, and these are his words: "I gladly say it: Nervine cured me and I am to-day as strong and well as ever." Samuel Eiza, of Montreal, was cured of a curable of the stomach and bowels after three bottles of this medicine. Jas. Sherwood, of Windsor, at 70 years of age, suffered from an attack of paralysis. His life, at that age, was despaired of. But four bottles of Nervine cured him back his natural strength. A. W. Boiger, of Windsor, says: "Nervine cured me of my suffering, which seemed incurable, and had baffled all former remedies and efforts." Peter Benson, of Paisley, lost flesh and rarely had a good night's sleep, because of stomach trouble. He says: "Nervine stopped the agonizing pains in my stomach the first day I used it. I have now taken two bottles and I feel entirely relieved and can sleep like a top." A representative farmer, of Western Ontario, says Mr. C. J. Curtis, residing near Windsor, his health was seemingly completely destroyed through a gripe. No medicine did him any good. "To three bottles of Nervine," he says, "I attribute my restoration to health and can enjoy life when troubled with liver complaint. This was the sentiment known to W. J. Hill, the well-known barrister of Bracebridge. "I was once ailing, but thank God, I am not dead yet. From the first few doses I took of Nervine I commenced to feel better, and am to-day restored completely to my usual health." A resident of the Maritime Provinces, in the person of S. Jones, N.B., says: "For twelve years I was a martyr to indigestion, constipation and headache. The treatment of several physicians did not help me. I have taken a few bottles of Nervine, and comprehensive in its
