Covered as In fact, there are hundreds of such all of them were, from the smallest to the largest, with a luxuriant tropi- pursuit and shelter for refitting their he, engage in light exercise, with cal vegetation, they seemed as if piratical vessels. floating on the water. A great group of them to the north of Cuba was named by the discoverer the "Gardens of the curiosities of the vegetable kingthe King," and another group to the dom, being adapted to an aquatic ex- pay particular attention to taking south received the designation of "Gardens of the Queen." This, of course, was in honor of Ferdinand and Isabella. Upon a third assemblage of islets, mostly of small size, located to the eastward of the great Isle of Pines, the title of "Jardinillos" or "Little stances they lose no time in taking root Gardens," was bestowed.

by no means to be sneezed at, having thus is formed an arch of roots with an area of about 1,200 square miles, branches spreading in every direction, It is situated at a distance of a few. The arch of roots serves as a nucleus, marine leagues from Cuba, on the about which mud and sand collect, south, and the southern half of it is a duces a great deal of sugar. There them are found the great lizards call- of boscotland and Ireland and now derived from ancestors? are no insurgents on the premises. ed "iguanas," which attain a length figuras the leading diplomat of

tensive than all the other isles and islets strewn round the Cuban seaboard. It is in reality two islands, which are separated by a tortuous channel. Rocky ledges form a sort of HEART stone causeway uniting them. Like Cuba, the Isle of Pines is composed chiefly of sedimentary rocks. The "jardines" and jardinillos of Columbus, on the other hand, have been built they are of coral and mangrove formation. Cubans call them "cays" rhyme it with "prize"-and from this word come the name "keys," applied by animals and plants; in other words, to islands of similar origin about the southern end of Florida.
