Also on any timber replaced with new at differ- petition of two or more cities or towns, ent periods, makes the maintenance a road between them may be made a very costly, and this class of structure state highway. The "state comthe most temporary and expensive. No mission" is composed of three comsooner have they all been rebuilt than missioners who compile statistics, make we must again commence the recon- investigations, advise regarding road struction of the first, in this way the construction and maintenance, and hold expenditure becomes perpetual, and fixes a large percentage of our annual tax. If these culverts are in their construction is paid by the county the proper locations, natural watercourses, remaining three-fourths being paid by the most durable manner is the best and most economical plan.

For small culverts there is very little difference in the cost of timber and vitrified pipe. If properly laid the latter will withstand the frost and is durable. These pipes may be used up to 18 inches in diameter; and the capacity may be increased by laying two or more rows, but the pipes should have at least one foot of earth or other filling between them. Culverts of 5 or 10 feet span should be cement concrete arches, which is permanent if the concrete is properly made. The concrete should be composed of first class cement: clean, sharp, silicious sand, free from earthy particles and coarse enough to pass through a twenty mesh, sieve; clean gravel screened through an inch and a half screen the largest stones to be not more than two and one half inches in diameter; or in place of gravel broken stones that will pass through a two and one half inch ring. These materials should be mixed in the ent must first be mixed dry, then a sufficient quantity of water added to make it into a thick paste. It should then be thoroughly mixed again, spread out, the stone or gravel added, and the whole thoroughly mixed until every put it in place. The walls should extend well below the frost line and have a wing at the ends to protect the embankment from wash.

BRIDGES.

ity, are not a good investment in view state three-tenths. of the reduced cost of iron and steel, Connecticut has introduced a plan of and the increasing cost of timber. Tim- highway improvement providing for ber decays quickly, and while cheaper the appointment of three state comthan steel in first cost, is more expen- missioners. When a township votes in sive after a term of years since the favor of constructing a road under the cost of repairs is very great.

iron superstructure is more than that ted to the state commissioners. If the of wood. The substructure of stone or commission approves. the township concrete is more expensive than pile or council lets contracts for the work, to crib work, but as in other structures a be performed under the supervision firm foundation is most serviceable and of the state commissioners. One-third economical. Wooden foundations from of the cost is paid by the state; onedecay and other causes settle and the third by the county; and one-third by least settlement in the foundation the township. The expenditure by the twists the timber causing a disarrange- state in this way is limited to \$75,000 ment of the strains and frequently annually. transferring the greatest load to the weakest point. Wherever timbers have commences, and when least expected, collapses under a heavy load.

Wherever timber is used in bridges it should be used in members from four to six inches in thickness, the strength of the beam or chord being obtained by building several members together, properly breaking joints, and coating each bearing with lead. A further protection is to cover these built timbers with galvanized iron to protect the numerous joints and bearings from moisture. All caps. corbles, chords, braces and floor beams should be made in this way so that the thickness of no timber will be more than six inches. A wooden bridge should be painted one year after erection; iron bridge at time of erection, and care should be taken to see that they are kept painted and that all nuts are kept tightened so

share of the load.

towns and cities will pay only 10 per cent of the cost,

IN BRIEF. Roads that "break up" are bad roads.
