THE SUMMER CARE OF TREES.

Many complaints are reaching me of trees dying out during the summer months; sometimes the cause is traceable, but in most cases there is no apparent cause. Some of the failures can be traced to the following: Bad planting; insects, principally aphids and caterpillars; lack of moisture; unsuitability of soil or climate; rubbing or browsing by cattle, etc. Very large trees, says a writer in Farmer's Advocate, should not be transplanted. It is difficult to take up a due proportion of roots, and the shock of transplanting a large tree is greater than with a small one. The scars of the large limbs, which it is generally found necessary to remove, are unsightly, and it is more difficult to form a symmetrical shape from an old tree. Insects injurious to trees are increasing rapidly in many parts of the Province, the most numerous being the green lice, aphids. These cling to the lower side of the leaf and suck the sap of the tree, reducing its vitality. In addition to this injury the insect exudes a sticky substance called honey dew; this adheres to the bark of the tree and produces a fungus growth which soon kills the tree. From experience gained on this farm we are inclined to think that more trees are killed by the fungus than from the loss of sap taken by the aphid. Spraying with coal oil emulsion and with a decoction of tobacco leaves is recommended for the aphid. We have had the best success with the tobacco; six pounds of tobacco, cigar-makers' refuse, is placed in a coal oil barrel, boiling water sufficient to cover the tobacco is then poured on the barrel, closely covered and allowed to remain for twelve hours, twenty-five gallons of water is then added, and when strained is sprayed thoroughly on the trees. This should be done at the very first appearance of the aphid as it increases very rapidly and takes but a short time to severely injure the tree. We have had no experience with the caterpillar on this farm, but I understand that a spraying of weak Paris green liquid is the best treatment. If a tree is kept growing with vigor it is seldom that insects trouble it, but an unhealthy tree is always liable to attack. Persons having a convenient water supply often attempt to augment the light rainfall by turning on the hose and saturating the soil immediately around the roots of the trees. This seldom gives good results. The better plan is to cultivate a space around each tree, varying from one to five feet, depending on the size of the tree. So far, we have found it impossible on this farm to grow with success any kind of tree if surrounded by soil or weeds, as they rob the tree of so much moisture that the trees soon die. The soil best adapted for tree growth with here is probably a rich vegetable humus, but this is not obtainable everywhere, and much can be done by proper management toward improving unsuitable soils. Where the soil is inclined to be too heavy the subsoil should be discarded and some mellow surface soil used, and on such soil the baking and cracking usual after heavy rains can be prevented by surface cultivation, for which purpose the hoe or cultivator, used so shallowly, are very satisfactory. On poor, leached soil the remedy is found in the use of an abundance of well-rotted manure. Very little of this should, however, be placed directly in contact with the roots of the trees. A surface application in the shape of a mulch is better; this will retain moisture and add fertility at the same time. No person should undertake the planting of trees unless prepared to protect them by suitable fences or guards, for during fly time cattle appear to consider that all trees were planted for the special purpose of offering them an opportunity of getting rid of the troublesome insects, and the trees are destroyed in a short time. Most avenue trees require some pruning each year, and this work should not be delayed until the objectionable limbs are large. Scars are then left, and the tree also becomes unsightly; if in pruning the small branches are up-ward cut it is made the succeeding shoots are not so much inclined to droop. If suitable trees are planted and kept vigorous by frequent cultivation there will be very little injury from insects, and a few minutes spent each month in pruning is much better than waiting for years until large branches are formed. If a tree is not worth fencing it is not worth planting.

TIM'S HORSE TALK.

When a horse does not thrive on ordinarily good feed and care it shows that something is wrong. Its digestion is not good, it has worms, or its teeth are in bad condition. Have the teeth examined first. If they are sharp and uneven level them with a float. Feed wheat bran, ground flaxseed and oats or cut hay. A few potatoes or potato parings are good. Also carrots fed once each day.

Be sure that the mangers are sweet and clean. Sour mangers are an abomination to a horse.

If you have not "cleared horse" in the horse stable do it the first wet day when you cannot work on the land. Scrub the stable out thoroughly with warm water in which some potash has been dissolved, and whitewash the sides and ceilings and wash the windows.

Every farmer who keeps horses should have a patch of carrots. They cost less than oats per bushel, and if one bushel of oats be fed with two bushels of carrots they will do the horse much more good than if three bushels of oats were fed raw. Raise some this year and try them.

Do not stuff your horse with hay; it is a waste as well as an injury to the horse.

The Kingston Council for the benefit of \$25,000, promise to employ 250 in the

Working or driving when the stomach is filled with hay is very liable to cause broken wind or heaves.

If your horse has been worked or driven very hard always let him rest awhile before being fed.

Be patient with the colts. The nervous colt will make the most trustworthy horse.

If he sees everything on the road it is proof of his intelligence, and as he soon as he realizes that he will not be hurt, his shyness can be overcome.

A low, kind voice and a firm hand will soon inspire his confidence, and then you are reasonably sure of his prompt obedience in most cases of emergency.

Never lose your temper when handling a colt. If you do the injury to his manners may be irreparable.

Whenever you feel tempted to speak irritably to a horse, just stop and ask yourself how you would resist being spoken to in the same tone.

Horses do not understand all words as clearly as men do, but detect an irritating tone of voice even more readily.

Horses suffer from extreme heat as well as men.

These are the days for galls and sore necks. Wash often and keep perfectly clean both necks and collars.

"I spoiled a good horse by driving over a piece of board with a nail sticking up through it," said a friend lately. Look out for such things. And if a horse limps or seems loth to go, don't whip him. Alight and investigate the situation for a cause.

COTTAGE CHEESE.

We are asked to give a good receipt for cottage cheese and the best method of preparing it. We don't know as the following is the "best," but we know it makes a very good cheese:

Take sour milk that is not too old, lobbared is best, place it on a stove till the curd and whey separates. Use care not to cook it very much as it hardens the curd. Put the whole mass into a cheesecloth bag and hang where the whey will drain out. When the curd is a little dryer than you wish your cheese to be, remove it from the bag and mix into it enough sweet cream to make it the consistency you wish your cheese. Season with salt and pepper to taste. It can then be made into balls, pats, or left in a dish and served in bulk.

Some prefer a very moist cheese, in which case it cannot be made into balls—others a dryer one—but we know of no one who likes the curd hard, hence the caution, "do not cook the curd much."

If you want to make up as soon as possible it is not necessary to wait for the whey to drain out of its own accord—it may be squeezed out with the hand as soon as cool enough to handle.

PAINT FOR PEACH TREES.

For an inexpensive and effective wash to protect peach trees against borers a writer recommends the following: Slack lime to the consistency of good mixed paint, and to each pailful of mixed paint, add one quart of raw linseed oil, which will thoroughly mix by a few minutes' stirring. With this paint the trees where there is danger of borers entering. For applying use a painter's round dust brush. Apply the paint about June 1, and it will remain a perfect coating until heavy rains in October or November. Examine the trees for borers before applying. Washes made with soap, ashes, potash, etc., do not adhere long enough to protect through the season. This wash will, and will wash off during the winter, leaving the bark smooth.

SHE GOT OVER IT.

Several years ago I was serving a prominent charge in South Florida, and on a particularly blue Monday I was called on to attend the funeral of a rural parishioner, writes a correspondent. I felt sad. The scene was a pathetic one. The widow stood immediately by me, and near her two or three wee-begone-looking little children. We were at the grave, a rude, wild, unkempt country "burying ground." The mother of the grief-stricken wife stood near, supporting her daughter. A wild torrent of grief burst from the poor afflicted woman as the benediction was pronounced. Just then the mother spoke in an audible whisper these comforting words: "Hush, Sal! Oh, Sal, hush! Don't bother so, 'cause you'll git over it. I've buried four men, and I've got over it every time. Hush, gal, hush!"

ASSETS AND LIABILITIES.

Creditor—How long will it take you to prepare a statement?
Mr. De. Bust, head of bankrupt firm—Our liabilities are so scattered that it will take us about three months to collate them.

Creditor—Three months? That's a long time to wait; and besides, you must then have additional time to prepare a statement of assets.
Mr. De. Bust—Oh, I can get up that in five minutes.

TO CURE A COLD IN ONE DAY.

Take Laxative Brown Quinine Tablets. All Drugists refund the money if it fails to Cure. "E."

PRIZES FOR BABIES.

Bulgaria is going to take effective means to increase its population. For every son born beyond a minimum number 30 francs will be paid not only to the father, but to the mother also. A soldier showing a dozen sons, will receive a pension large enough to support him, and besides a decoration. The same reward will go to his wife.

LIQUOR AND VOICES.

A physician who has been studying the effect of liquor on the voice states that none of the great singers have ever been teetotallers. Wine, taken in moderation, he believes, is useful for the voice, but beer thickens it and makes it guttural.

GENTLE REMINDERS.

She—you remind me of Lago, Mr. Slimmer. I prefer flesh to men.

You remind me of the cannibals.

SUMMER HYGIENE

What You Should Eat and Drink During the Hot Weather.

Summer is the season of health and of recuperation for those who know how to regulate their mode of living in accordance with the special conditions of hot weather; but to those who still try to live as they do in winter it is a season of discomfort, if not of real danger to health and life.

In winter the loss of heat from the body is rapid and continuous, and we seek by means of food and exercise to stimulate heat production, and by means of heavy clothing to limit heat radiation from the body. In summer we should do just the opposite, the object then being to reduce the activity of the vital processes within the body and so to lessen the production of heat.

There is no greater mistake than to seek to whet the appetite in hot weather by savory and highly seasoned dishes, or by cocktails and other appetizers before eating. The desire for food is naturally blunted at this season, and this indication, like most of nature's promptings, should be heeded. Meat, especially fat meat, should be taken in small quantity, the diet consisting mainly of fruits and green vegetables.

Thirst is greatly heightened in consequence of the increased perspiration, and it should be gratified by frequent, but not copious draughts of cool water. See to it, however, that the water is pure water, not contaminated with sewage or the drainage of barns and cattle-pens.

It is the fashion to deprecate ice-water and to drink it. Ice-cold water is not only cooling and grateful, but it is refreshing, and never more than a third of a glass at a time, it is not injurious. The water should be cooled by putting in a few lumps of ice in the water. The same commendation and caution apply to ice-cream; a little of it, eaten slowly, is nutritious and healthful; a heaping plateful gulped down rapidly will offend the stomach.

A word concerning underclothing may be timely. There is a controversy always going on for and against woolen undergarments. The writer personally prefers wool in both summer and winter, and when it decidedly light weight, has found it decidedly most comfortable wear, even in tropical climates; but the question, after all, is not so much one of material as of texture. The important point is that cloth for undergarments should be loose and airy; if it may be of wool, cotton, linen or silk, as the wearer prefers.

NEARLY DISCOURAGED.

The Experience of Mr. Ralph Gibson, Who Suffered Greatly From General Debility.

From the Advertiser, Hartland, N.B.

Ralph Gibson, postmaster at Monquart, Carleton Co., N. B., is also known as a prosperous agriculturist and an enthusiast in his line. Now stout and vigorous, weighing 250 pounds, he scarce would be recognized as the man who six months ago was the picture of one suffering the terrible and discouraging effects of general debility. He was run down in health, suffered much from dizziness, almost blindness, general dullness and depression of spirits. He had a poor appetite and such food as he ate gave him great distress. He was incapacitated for the work that he was doing and was well nigh utterly discouraged. The symptoms bordered on those to which hypochondria is manifested. Through reading the Advertiser he learned of the particular benefit that several of his friends in this vicinity had derived from the use of Dr. Williams' Pink Pills, and by the hope held out by their testimonials he secured a supply and took them accordingly to directions. The result was almost magical; immediately his symptoms began to become less disagreeable, and he steadily gained until now he is perfectly free from his old troubles. He gladly and freely gives this testimonial, that all who may read it may be troubled with general debility.

Dr. Williams' Pink Pills cure by going to the root of the disease. They renew and build up the blood, and strengthen the nerves, thus driving disease from the system. The genuine can only be had in boxes, the wrapper around which bears the full trade mark, "Dr. Williams' Pink Pills for Pale People."

SUBSTITUTE FOR RUBBER.

The price of India rubber is so high, owing to its extended use in bicycles and electrical devices, that a substitute, oxyline, is being introduced to serve its purpose. According to the French Consul at Dusseldorf, oxyline is made by oxidizing linseed oil and mixing with it pounded jute waste or some similar fiber. It is already made in England and Germany, and is employed in making coverings for cables, insulating plates, floor coverings, water-tight receptacles, knobs, etc. It is useful for many purposes for which India rubber is now employed.

OUT OF STEP.

Dinny had enlisted, and his mother went to see him drill. He wasn't very far up in the tactics, and was conspicuous for his awkwardness. But as his fond mother gazed, she exclaimed: "God bless my son of thim out of step but me boy Dinny."

You Can Get Tired

By working hard, and then you can get rested again. But if you are tired all the time it means that your blood is poor. You need to take Hood's Sarsaparilla, the great cure for that tired feeling because it is the great enricher and vitalizer of the blood. You will find appetite, nerve, mental and digestive strength in Hood's Sarsaparilla.

Canada's Greatest Medicine.
Hood's Pills cure nausea, indigestion, etc.

SAVED BY A PILLOW.

Remarkable Experience of an Army Officer in Africa.

An English army officer was hunting lions in Sumaliland. It was known that lions were in the neighborhood, and a rough thorn fence had been put up around the camp for protection at night.

About midnight the officer was awakened by a peculiar sound, and the next moment he felt a sharp pain in his hand, which was resting on the pillow above his head. Then he knew that his hand was in a lion's mouth and that the noise which had awakened him had been made by the beast in jumping into the tent.

With great presence of mind, the officer kept perfectly quiet, realizing that his only safety lay in this course. The lion changed his grip, doubtless intending to seize his victim by the shoulder, but by a rare bit of luck, he got the pillow in his jaws, and made off with it.

Next morning the pillow was found several hundred yards distant in the jungle, where the lion had doubtless dropped it when he found that he had but a bagful of feathers, instead of a man.

The officer's hand was slightly lacerated; otherwise he was unhurt.

Ill Temp'r

Is more rapidly improved by relief from physical suffering than in any other way. Step on your friend's corn and the impulse to strike is strongest. Putnam's Painless Corn Extractor, by quickly and painlessly removing them, insures good nature. Fifty imitations prove its value. Beware of substitutes. "Putnam's," safe, safe, painless.

THE FINEST QUALITY.

Is your partner a man of good judgment? asked an old friend who is in the city on a visit.

There, in the unobtrusive answer, is a man of infallible judgment. He never makes a move without taking my advice.

Beware of Ointments for Catarrh that contain Mercury.

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surface. Such articles should never be used except on prescription from reliable physicians, as the damage they will do is tenfold to the good you can possibly derive from them. The Catarrh Cure manufactured by F. J. Cheney & Co., Toledo, Ohio, contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken inside and made in Toledo, Ohio, by F. J. Cheney & Co., Testimonial. Sold by Druggists, 6 to 12c per bottle. Hall's Family Pills are the best.
