COOK ELECTRICALLY

and use the **"STANDARD"** because--

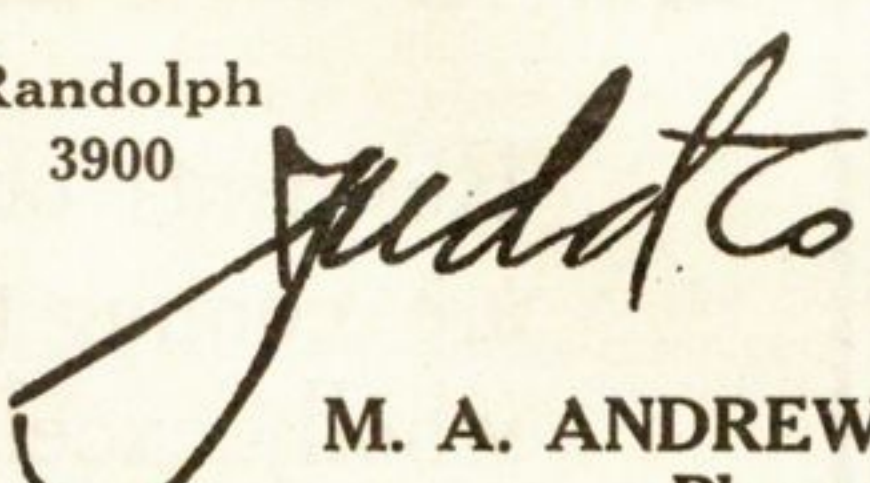

"STANDARD" ELECTRIC STOVES

Fill all the specifications for a perfect cooking machine. Here are some of the outstanding features of the "Standard"—

They are **SAFE** because of the doing away with matches and the menace of an open flame fire; then there is no possibility of escaping gas nor can there be an explosion.

They are **ECONOMICAL** because, being equipped as they are with insulated, heat-retaining aluminum oven and wells the food continues to cook for a long period after the high heat is shut off. The Electric Well has all of the advantages of a fireless-cooker with none of the objectionable features; there never is any offensive odor or taste, due to the fact that in the "Standard" Well the heat never falls below cooking heat as is the case in fireless cookers. At this low temperature food will cook all night for less than 2 cents. We call attention to our "301" model which operates on your lighting circuit.

Telephone Service Must Go On

The blizzards of winter and the cyclones and thunderstorms of summer are the inveterate enemies of the telephone service.

Experience covering many years has enabled the Bell company to develop the best forms of protection and the best weapons of defense in this warfare. In spite of all efforts, however, the destroying elements sometimes have their way and the telephone lines go out of service.

In such emergencies the Bell organization is instantly on the job making repairs as quickly as possible and insuring the users the shortest possible period of interruption of service.
