

Only 14 More Days To Save Your Trees

THIS IS THE MACHINE THAT SAVES THEM FOR YOU.

While your trees are bare, before the tender buds come out, only to be eaten by the larvae of the Tussock Moth, Oyster Shell and San Jose Scale and other menaces, see that they are sprayed properly. One spraying in the spring is worth six in the summer.

This is the largest organization of its kind in the suburbs of Chicago. Every man is a trained tree surgeon. Let us examine your trees for cavities, rotting hearts, and estimate on the repair of those defects and the removal of dead wood. Your trees are valuable, beautiful things and should be protected, inspected every year.

SPRAY NOW--SUMMER SPRAYING BURNS THE LEAVES
