

cultures not to be taken before twelve days from onset of the disease.

Measles—For a period of five days after the appearance of the rash and until the cough and other catarrhal symptoms and abnormal mucus membrane secretions have ceased.

German Measles—For eight days from the onset of the disease.

Mumps—For a period of ten days after appearance of the disease and until disappearance of the glandular swelling.

Scarlet Fever—For a minimum period of four weeks until throat is normal and all discharges from ears and suppurating glands have ceased.

Smallpox—For a minimum period of three weeks and until the skin is entirely smooth and the "Seeds" have disappeared or have been removed from the palms of the hands and soles of the feet.

Whooping Cough—For three weeks after the development of the characteristic whoop or paroxysmal cough or until one week after the paroxysmal cough has disappeared.

Epidemic Meningitis—For two weeks after temperature becomes normal or until two successive cultures from the nasopharynx taken at intervals of three days by or under the supervision of the Health Officer show no meningococci.

Infantile Paralysis—For the period of the clinical course of the case and at least three weeks from date of onset.

Typhoid Fever—For the clinical course of the disease and until two successive specimens of faeces and the urine taken one week apart are found by laboratory examination to be negative for typhoid or paratyphoid bacillus.

Septic Sore Throat—For the period of the clinical course of the disease and until the throat culture is negative or no longer shows hemolytic streptococci.

REGULATION NO. 5. INCUBATION PERIODS. For the purpose of Ordinance Section 8 the maximum incubation periods shall be considered to be as follows:

Chickenpox—18 days from the last exposure.

Diphtheria—One week, unless immunity has been proven by a Schick test or complete immunity has been secured by toxin-antitoxin three months previous to exposure or negative culture results are obtained from throat and nose.

Measles—Sixteen days from the date of last exposure.

German Measles—Three weeks from date of last exposure.

Mumps—Three weeks from date of last exposure.

Scarlet Fever—One week from the date of last exposure.

Smallpox—Twenty days from the date of last exposure.

Whooping Cough—Two weeks from the date of last exposure.

Epidemic Meningitis—Two weeks from the last exposure or until culture from secretions of naso-pharynx taken by or under the supervision of the Health Officer show no meningococci.

Infantile Paralysis—If under 16 years of age, two weeks from last exposure.

Typhoid Fever. All contacts should be immunized with triple typhoid vaccine.

Septic Sore Throat—When laboratory examination shows throat and nose cultures to be free from hemolytic streptococci.

REGULATION NO. 6. Relative to Section 6. **DISINFECTION. PRECAUTION BY ATTENDANTS.** The physician or other person permitted to visit a person affected with communicable disease shall practice such measures of personal cleansing, disinfecting and all other precautions necessary, to prevent the spread of the disease to others.

REGULATION NO. 7. Relative to Section 17. **FOOD HANDLING ESTABLISHMENTS.** Restaurants, hotels, lunch counters, soda fountains, candy shops, grocery stores, bakeries, butcher shops and other places where food stuffs are kept for sale shall be located in areas at all times free from contamination, with proper drainage and connection with the sewerage system. They shall be well constructed with proper light and ventilation, shall be kept in a clean and sanitary manner and shall offer for consumption only clean, freshly prepared foods in a thoroughly wholesome condition. All utensils, tables, sinks, refrigerators and other storage facilities shall be clean, sanitary and properly ventilated. Tables, sinks, etc., where food is prepared shall be separate from those where dishes and utensils are washed. No cracked or broken dishes or utensils which cannot be properly cleaned shall be used. There shall be provisions for properly scalding by boiling water or steam all eating utensils and dishes. There shall be sufficient light and proper ventilation and the premises shall be kept free from insects and mice and other vermin. There shall be a water closet, conveniently available, and lavatory with hot and cold water and individual towels in the working rooms, separate from the sinks for washing dishes and utensils. All working rooms for preparing, serving or offering for sale of foods shall be arranged so they may be completely shut off from other rooms used for living quarters. All employees shall be personally clean and exterior clothing worn by them shall be clean and washable.

As provided by the ordinance referred to, the foregoing rules and regulations shall take effect and be in force ten days after publication in a newspaper of general circulation in the Village of Winnetka.

DR. HOWARD A. ORVIS,
Secretary, Board of Health.

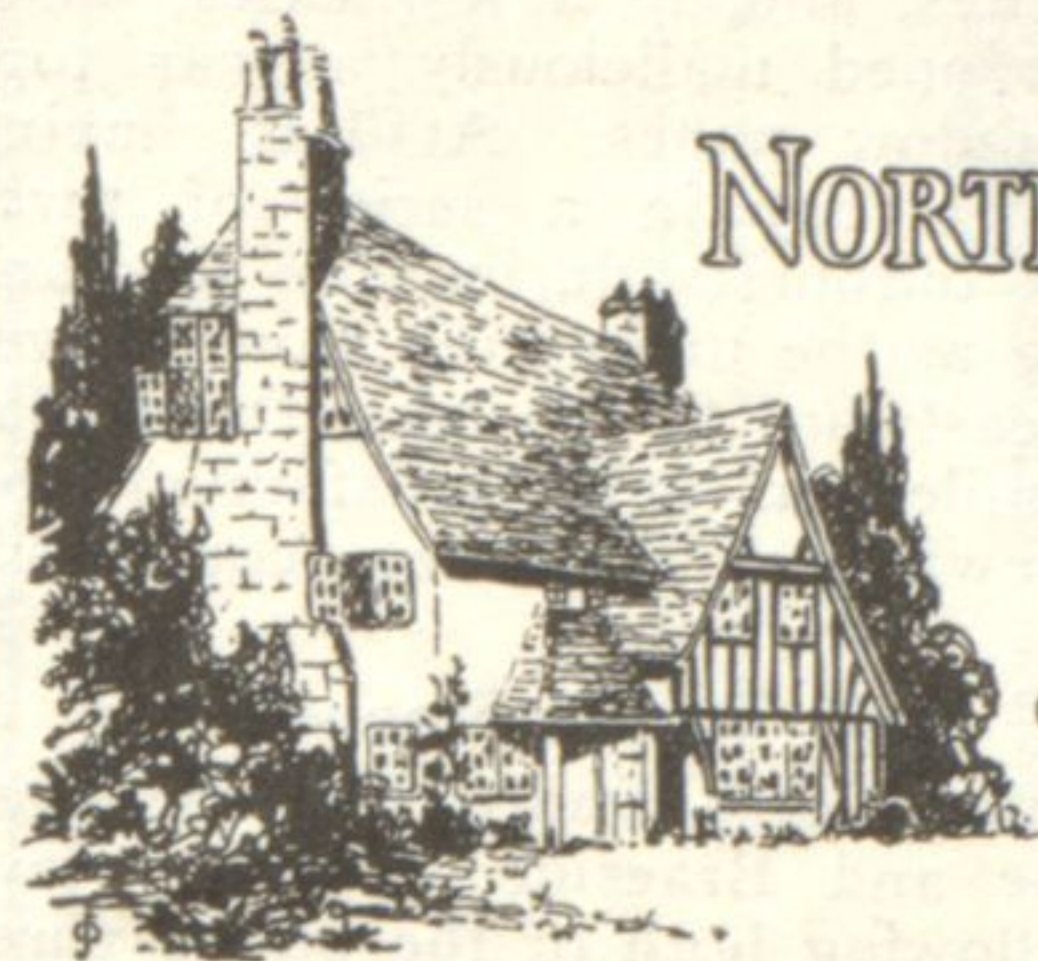

Mr. and Mrs. Fred L. Workman, 222 Leicester road, and Mr. and Mrs. Merritt H. Dement, 337 Abbottsford road, returned to Kenilworth last week from Virginia Hot Springs.

—o—

Now two thousand
FRIGIDAIREs a day!

Two thousand Frigidaires a day are now required to supply the enormous demand—a demand that has already placed more Frigidaires in use than all other electric refrigerators combined.

Two thousand more Frigidaires to provide carefree, economical refrigeration for homes and stores—to bring two thousand more users of refrigeration a new independence of outside ice supply.

The amazing growth in popularity of Frigidaire is conclusive proof that it is filling a real need—a need for better, more economical food preservation. Modern homes and stores find that Frigidaire pays for itself many times over in better refrigeration at low costs.

If you are not among the thousands of Frigidaire users, visit our salesroom and see Frigidaire demonstrated. Ask about prices, terms, and operating costs.
