Established
Forty Years

FROM the very first, this has been our policy—to wash your laundry like it would be done at home, and at a figure in keeping with the family budget. The inception of that policy began with a business conducted in a small room; strict adherence to it for forty years has built one of the largest laundries between Edgewater and Glencoe. Just another excellent example of the important role Service plays in the development of an enterprise.

Field Museum is Cool Spot in Summer's Heat

While Chicago and vicinity swelters in a sizzling heat of 90 degrees or more, a really cool haven awaits all who will visit Field Museum of Natural History.

Swept by the lake breezes on the exterior, and its interior of cool marble, efficiently ventilated, the temperature in this temple of sciences never exceeds 70 degrees, museum officials announced this week in issuing an invitation to all who suffer from the heat to seek refuge within its walls.

The moment one enters the portals of Stanley Field hall, into which the main entrance opens, he is struck by the refreshing atmosphere of the building, and many visitors have commented on the great relief from the heat the museum affords.

The building looks cool and is cool. To add to the psychological effect, the visitor may feast his eyes on exhibits of Eskimos, polar bears in their native settings, and other collections brought from the Arctic regions. On the other hand he may enjoy the collections from Africa and others of the hottest places in the world in the greatest comfort.

The museum is open free to adults on Thursdays, Saturdays and Sundays, and is free to children, students and teachers at all times.

N. U. Grants M. A.'s in Public Utility Service

At the recent Sixty-ninth annual Commencement of Northwestern university the graduate division of the School of Commerce granted, among others, nine master's degrees in public utilities. In addition to the requirement of one full year of graduate study specializing in the economics of public service industries each candidate for the degree of M. B. A. is at Northwestern required to present a dissertation on some subject from his major field. These theses are filed in the various libraries of the university where they may be consulted. Among the subjects included this year were: "A Theory of Telephone Rates," "State Regulation of Public Utility Security Issues," "A Comparative Study of Revenue and Expenses in Certain Public Utilities," "Some Economic Aspects of Municipal Ownership in the Electric Light and Power Industry," "An Appraisal of the Security of Street Railway Securities," "Capitalization and Capital Control," "An Index Number for the Determination of Cost of Reproduction New," "Some Economic Aspects of the Rate of Return," and "Some Trends and Recent Developments in the Gas Industry." The more valuable of these researches will be published in part or in whole in the Journal of Land and Public Utility Economics.

Fresh
Milk
365 Days
a Year

Growing youngsters need quick energy to offset the fatigue of romping, rollicking play. The best and most natural way is to give them milk—Bowman's Milk—at least a quart a day.

Bowman's Milk is full-cream milk, rich in the precious vitamins that build firm muscle and strong bones. And rich in energy to resist disease.

Use Bowman's Milk in cooking and baking. It assures you uniform richness, freshness and fine flavor every day of the year.
