**Pupils Give Illustrated  
Talks on Great Composers**

Talks on great musical composers, illustrated by lantern slides and piano solos, were given by three pupils of the Horace Mann school on Thursday of this week. The program was prepared entirely by the children and was attended by Thomas Whitney Surette, musical adviser of the Winnetka schools. Mr. Surette also played three compositions by Beethoven. One of these was written by the great composer when a small boy

while another was one of the selections created after he had reached an advanced age. Mr. Surette pointed out the difference in the depth of feeling and artistry of the two compositions.

The pupils taking part in the program were Robert Eastman, speaking on Bach and accompanied by a selection on the piano played by Anne Olson; Althea Murphy told about Mozart and Elise Fleager played the illustrating selection; and Mitchell Hutchinson told of the life of Beethoven and Mary Randall gave the piano selection.

**They Soon Like the Idea!**

Teaching a child to save is easy if you go at it right. Just paint "word pictures" on the Value of Money . . . what great things Money will do if wisely conserved for the future . . . and the idea will soon be indelibly impressed in its youthful mind. From then on, a little bank will have a fascination all its own.

*We'll provide a Novelty "Barrel" Bank  
for your Children's Savings.*

**Chronic Poisoning  
Is Greatest Danger  
From Exhaust Gas**

The greatest danger from inhaling exhaust gases from motor vehicles is not sudden death but chronic poisoning that may lead to serious pulmonary, neurotic and circulatory complications, according to Dr. Isaac D. Rawlings, state health director, who points out in a statement issued this week that thousands of employes in commercial garages, patrons and drivers of gasoline buses and closed car passengers are subject to the deleterious effects of carbon monoxide when adequate ventilation is disregarded. Demands for garage space have resulted in the conversion of store rooms, ware houses and other buildings without ventilating facilities to that purpose while protection from cold has led to the heating of buses and closed cars with exhaust gases. These conditions have complicated modern life with a new hazard that man has never before experienced.

"Sudden death from inhaling motor exhaust fumes is apparently on the decline in Illinois but the hazard of chronic poisoning increases year by year" said Dr. Rawlings. "Constant breathing of carbon monoxide is unavoidable in commercial garages where engines are constantly running and where ventilation is poor. The danger is more acute in the winter when closed doors and windows cut off the outside air with the cold and the percentage of carbon monoxide on the inside goes up.

"The increasing use of passenger buses which depend on the motor exhausts for heating involves danger from leaks that may bring carbon monoxide into the touring compartments. This danger is greater for long distance lines where doors are opened infrequently and the risk centers more in the driver than the passengers. Effects of carbon monoxide on a bus driver are worse than those from alcohol because they come on without warning and they leave the victim completely helpless both mentally and physically. Closed cars for ordinary family service involve some danger from carbon monoxide when exhaust pipe heating devices are used.

"Constant breathing of carbon monoxide, as may be the cause with mechanics in commercial garages, may result in chronic poisoning which manifests itself in headache, weakness, dizziness and nausea. It is probable that the poisoning predisposes to pulmonary complications such as pneumonia, to multiple sclerosis and to neurasthenia. These disorders are not sudden but come on gradually after months or years of exposure.

"Ventilation is the great preventive. Free use of God's free air eliminates danger. Open doors and windows is the simplest way to ventilate but mechanical devices are practicable. Ozone machines that are on the market and have been installed in some places are virtually useless."

**Winnetka Shoe Store  
Observes Anniversary**

The Winnetka Shoe Store, 804 Elm street, Winnetka, next week will observe its fifteenth anniversary with an "anniversary sale," as announced elsewhere in this paper.

H. Luensman, the proprietor, opened this store on February 1, fifteen years ago, when the village was far smaller than it is today. His faith in the future of Winnetka was shown, however, in the erection, at that time, of the two story building which he now occupies and which at the time it was built, was the first up-to-date building west of the tracks.

Mr. Luensman came to Winnetka in 1900. Two years later he engaged in the shoe repairing business and fifteen years ago opened the store which he has since conducted.
