

HARDWARE BIG ITEM

FOURTEEN inside sets of locks including knobs and hinge straps and locking equipment for two sets of en-

trance doors complete the finish hardware in the Lloyd Hollister Inc. plant. The inside locks are installed in the various doors in the office sections of both the first and second floors.

The hardware which was furnished by James Swanson and Son of Chicago is of the best quality.

A RECORD FEAT

Reiss Construction Company Completes Excavation Job in Four Days, a Speedy Performance

ON a sunny day last July—July 15 to be exact—there appeared on Central avenue a fleet of excavators, meaning steam shovel, crane, trucks and men and four days later all disappeared. The Reiss Construction on McCormick boulevard and Dodge street had finished in jigtime the excavating for the new Lloyd Hollister Inc. plant.

The Reiss company has been fifteen years in business and knows its excavating. It claims the speedy work on our job is a record for the north shore and we do not question it. The first task was to tear down four big trees and this was done quickly, eighteen men operating equipment which consisted of a Type B-2 one yard steam shovel, a crane which has a boom extending forty feet, and twelve trucks for dirt disposal.

It was the most modern machinery that enabled the rapid excavation. The big steam shovel used dug down easily to the required depth of eleven feet.

**Art of Carpenter
Is Demonstrated
Throughout Plant**

ONE of the many fine jobs in the Lloyd Hollister Inc., building which enables us to show pride is the carpentering. The McKeown Brothers company, of Chicago, of which John C. McKeown, residing on South Private road, Hubbard Woods, is at the head, did the carpenter work.

In the office sections, the glass partitions have wood sash, one and three-quarters inches thick, neatly trimmed with yellow pine jambs and casings. Over the doors are transoms, hinged at the bottom and operated by transom lifts. The outside sash are metal, but were equipped by the carpenter with special sash operators. This is to accommodate full size screens. The outside entrance door and frame are of wood and of attractive design.

A patented McKeown truss roof covers the one story room in the rear. By using this special construction a working space 55x80 is provided clear of troublesome columns.

**Special Motors on
All Machines Give
the Speed Required**

THE modern publishing plant is a highly specialized workshop where every machine performs a definite function, and each machine is related to the next machine in a very definite way. In the Lloyd Hollister Inc., establishment every machine is equipped with a special electric motor made expressly for that machine. The electric motors run at a uniform speed.

Hollister Inc., has all the modern motor equipment which was engineered by the Kimble Electric company of Chicago.

Is It Necessary?

INSURANCE is acknowledged to be the basis of credit as well as the backbone of commerce. A policy of insurance relieves the policy-holder of a responsibility in whatever direction the insurance covers, be that fire, life or casualty. And by that relief is the policyholder able to add just that much to his energy in other directions.

INSURANCE has nothing to conceal. Insurance is performing a real benefit to your community and insurance is doing its share towards making the United States great.
