Best Wishes to
LLOYD HOLLISTER INC.

A Business Associate

Job of Engraving
Cards Is Rapidly
and Neatly Done

WHEN an order comes to Lloyd Hollister Inc., for an engraving job, this meaning the engraving of business and personal cards, wedding announcements and Christmas and New Year's cards and the like, the Stationers' Engraving company of Chicago, working with our Commercial department under an arrangement which calls for speed and consequent rapid delivery has demonstrated commendable efficiency.

This feature of the business of the publishing plant is particularly important because experience has taught that those ordering engraved cards or announcements are most critical. A neat, clean job has its own reward, we have found, for almost always it calls for "repeat" orders and that of course keeps the business wheels turning.

The Stationers' Engraving company has given us the service we ask and that is sufficient and the call for this work is a considerable item in our business.

Plumbing Contract
Among Biggest Jobs
on New Structure

A PLUMBING system, as complete and as modern as it is possible to have was installed in the Lloyd Hollister Inc., publishing plant. Charles R. Ewing of Chicago secured this contract, which was a most important one, and the results of his work are entirely satisfactory.

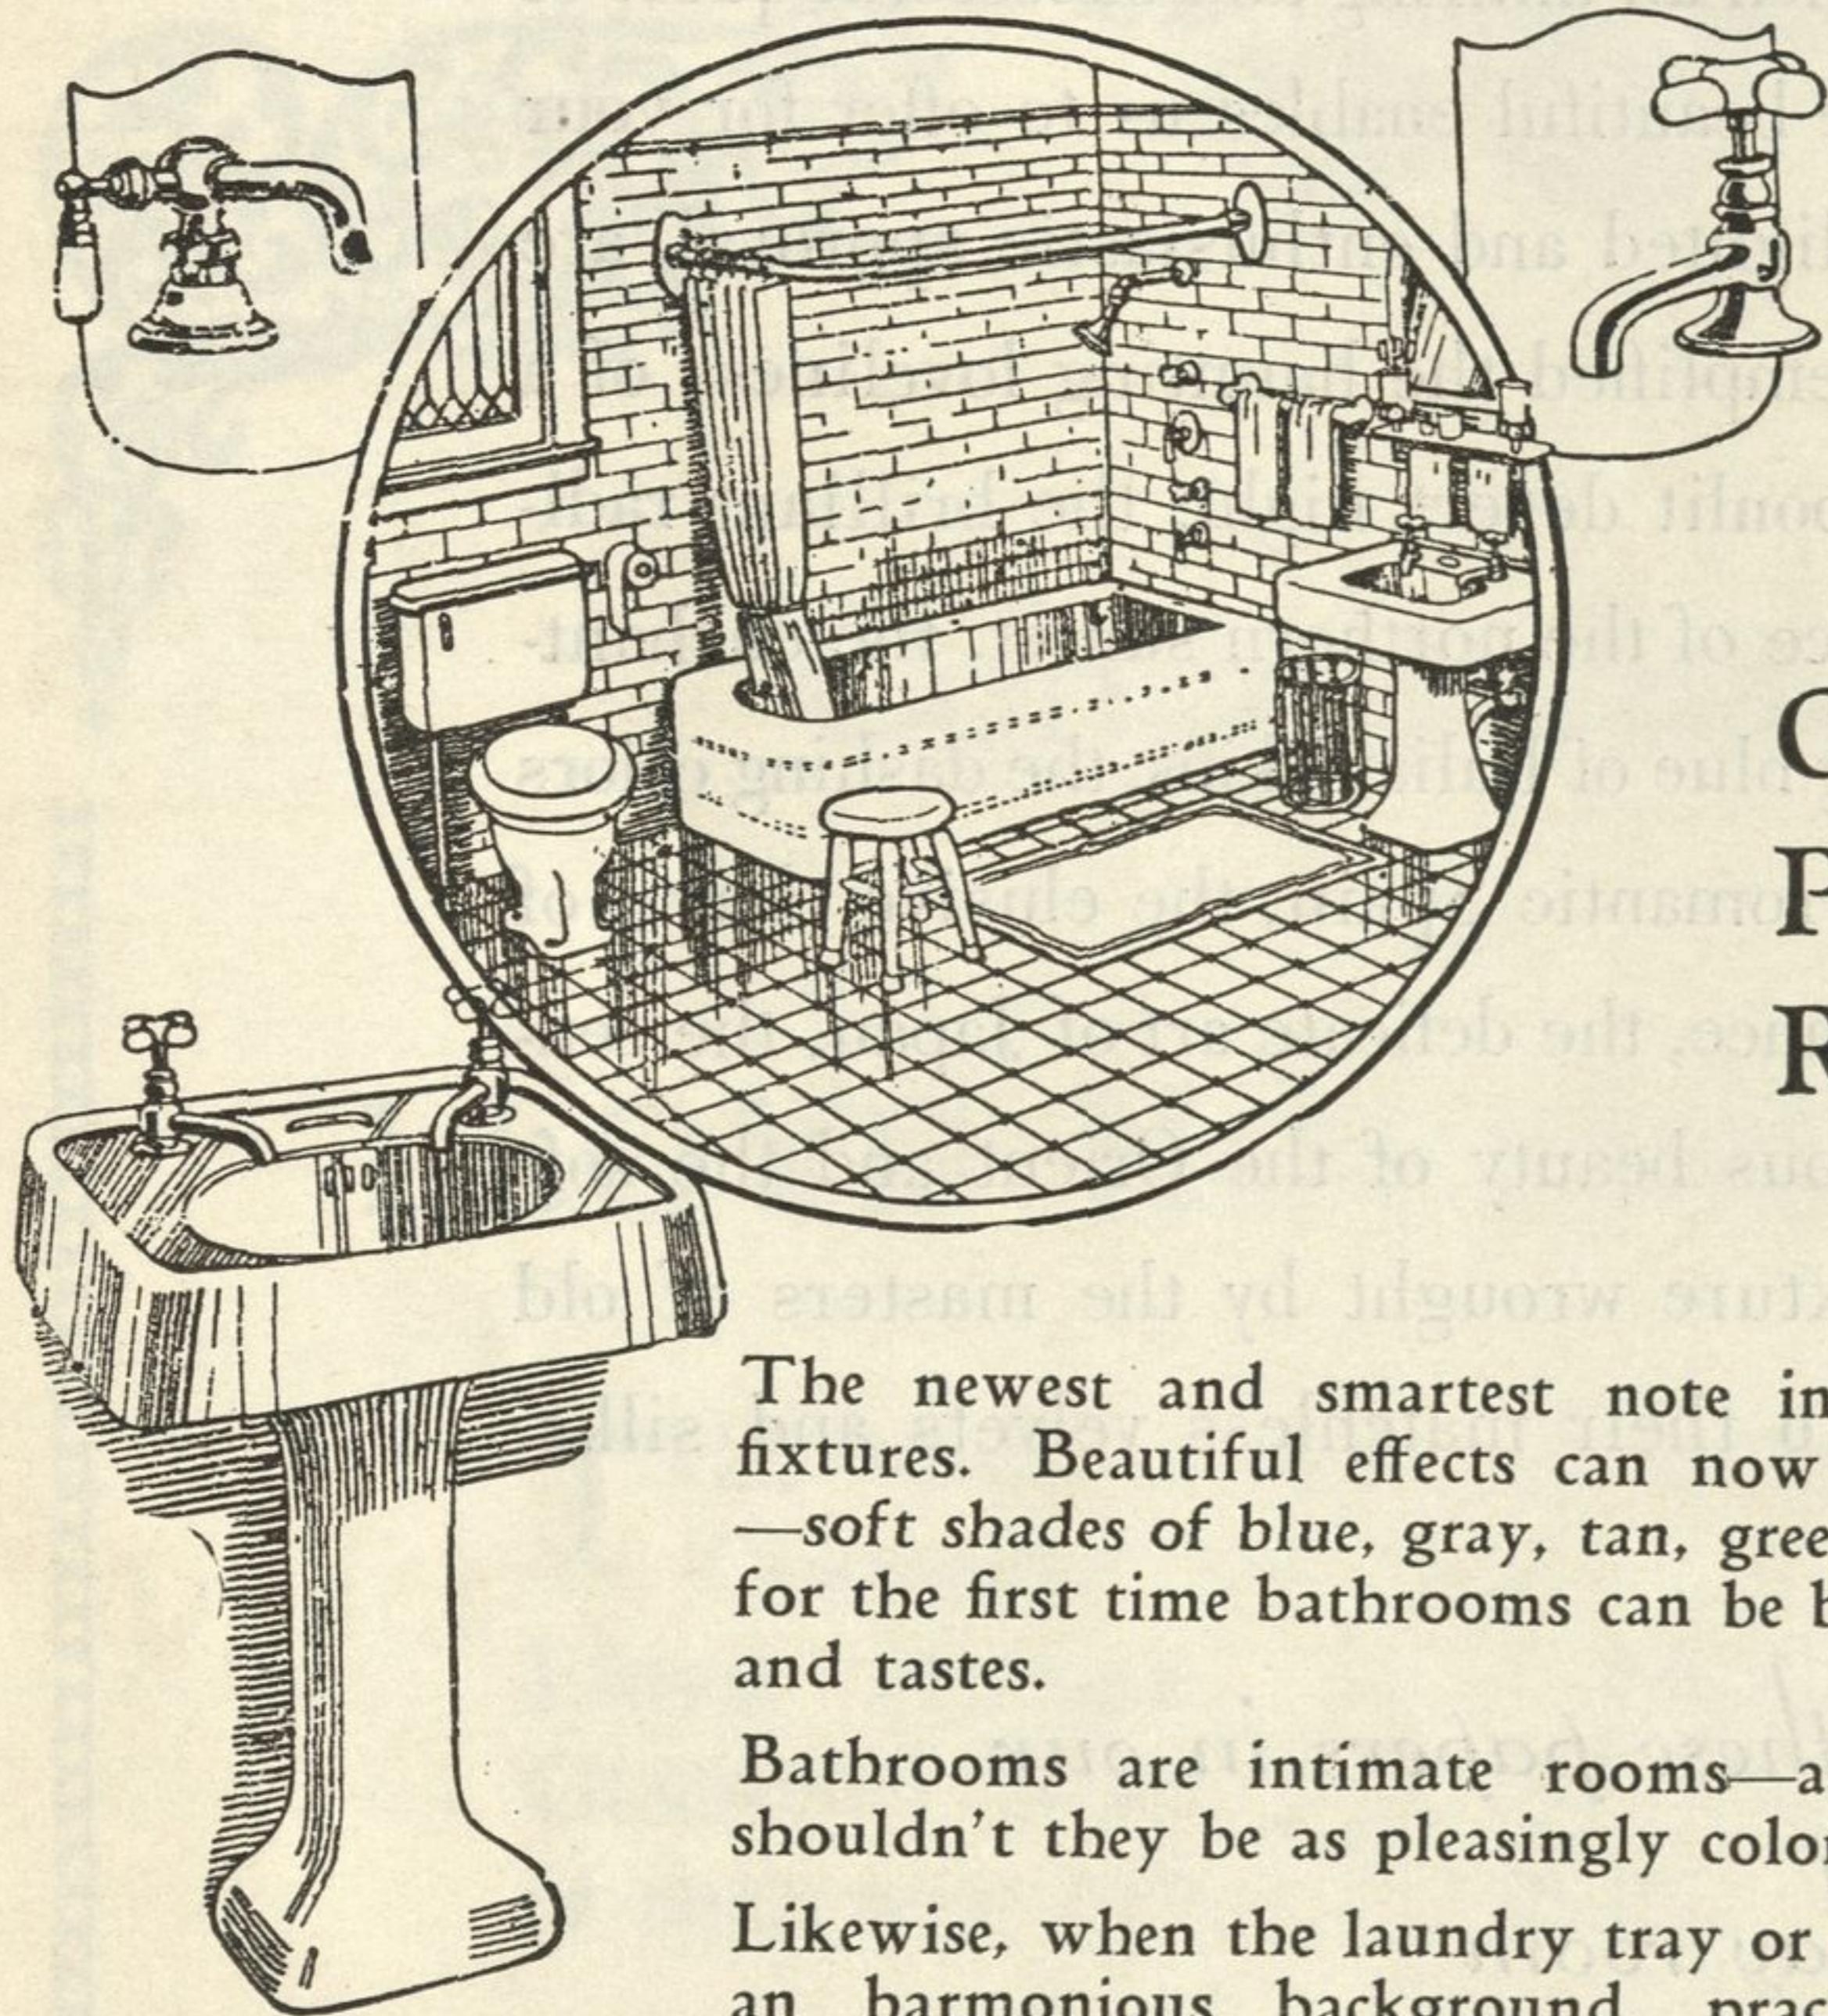

To one unfamiliar with the plumbing of a big building the amount of work required to complete such a job probably will prove surprising. The equipment for the three big washrooms is a big item in itself and one of the features is a shower bath for the employes of the mechanical departments. There also will be found a number of drinking fountains in various sections of the building. For all this work double strong leads were used.

But there is another feature and a most important one which the visitor to the plant will not see. That is the automatic sump pump. This pump operated by electricity is installed in the boiler room and is a protection against water seeping through the foundation. So powerful is it that it has a capacity forcing 65 to 75 gallons of water per minute through the tile drains and leads to the catch basin.

But that is not all. Roof drainage has been well taken care of. Mr. Ewing has attached fourteen cast iron down spouts to a Josam double roof drain. These down spouts are 11.4 inches in diameter, more than big enough to carry off any rain that may fall.

Albert M. Levy Is Chicago
Representative of Papers

Up-to-the-minute methods of L. Hollister Inc., make it necessary to have an advertising representative in Chicago. This man is Albert M. Levy, who has his office at 6 North Michigan avenue. Mr. Levy has been connected with our north shore publications for fourteen years. In the "way back when" days—the early years of the papers—he was a solicitor on the north shore and naturally is familiar with the field. Mr. Levy has been with our papers longer than any other man, with the exception of Mr. Hollister. Praise is due him for his Chicago accounts and for his efforts which helped to make WILMETTE LIFE, WINNETKA TALK and GLENCOE NEWS so successful.

Colored
Plumbing
Fixtures

Offer New Beauty
Possibilities for Bath
Room and Kitchen

The newest and smartest note in bathrooms is colored plumbing fixtures. Beautiful effects can now be secured with fixtures in color—soft shades of blue, gray, tan, green, old ivory, and lavender. Today for the first time bathrooms can be built to suit individual personalities and tastes.

Bathrooms are intimate rooms—as intimate as boudoirs, so why shouldn't they be as pleasingly colorful?

Likewise, when the laundry tray or the kitchen sink is in color against an harmonious background, practical, work-a-day laundries and kitchens are transformed. They acquire a cheerfulness and charm whose value is significant when leases or sales are under consideration.

It was our privilege to furnish and install the plumbing fixtures and execute the plumbing in the new plant of Lloyd Hollister Inc.
