

Two ways of doing tree cavity work

he's *wasting*
time and money

he's *saving*
time and money

Which one do you want to work for you?

OBSOLETE The man in the picture above is performing tree cavity work by the old hand method. He is working fast if he gets in 45 blows per minute. Slow—laborious—expensive. You pay the bill!

×

MODERN Now compare the modern way of doing it. The Lynch pneumatic chipper at work, delivering 2,000 blows per minute. It saves 35% to 50% on the cost of tree cavity work. Our estimate, furnished before we begin, will prove to you that we give you *more* for your money than any similar organization on the north shore.

Now—how about your trees?

This is the right time to have them properly treated!
