**Carol Is Winner in
Sheridan Yacht Race**

In the first race of the series for the mid-season trophy at the Sheridan Shore Yacht club Saturday afternoon, Elliott's Carol, skippered by Rubenkant of the Chicago Yacht club, crossed the finish line in front.

He was followed closely by Sam Goss in his North Star, and in third position was H. L. Smith in the Andelah. Four races will be held to determine the winner of the mid-season trophy, in the club's second series of the season. Next of the races, the second, will be held off the Wilmette harbor Saturday afternoon and the other will follow in successive weeks.

At one of the Frigidaire plants in Dayton, O., is the largest one-story factory building in the world. It is 500 feet wide and 2,400 feet long.

**NEW SEWAGE PLANT TO
BE FINISHED IN MONTH**

**Sanitary District Rushes Work
on \$31,000,000 Structure; Is
Largest in World**

With the latter part of August tentatively designated as the date for starting operations, the sanitary district of Chicago is putting the final touches on its mammoth north side artificial sewage treatment plant at Howard street and McCormick road, preparatory to placing it in active service. It is the largest project of its type in existence.

Dedication of the huge works, the forerunner of others of similar magnitude in the sanitary district's program, will be made the occasion for a fitting ceremonial at which thousands of spectators are expected to be present as well as numerous distinguished invited guests.

Costing \$31,000,000 with its vast system of large-sized intercepting sewers honeycombing the area to be served, the project will handle the sewage from the entire territory from Fullerton avenue north to the Lake county line, a region now supporting a population of nearly 1,000,000.

The project, incidentally, is the first of three similar units involved in the mandatory program required by the provisions of the federal permit which authorized the sanitary district to use water from Lake Michigan.

The plant occupies 70 acres of a 100-acre tract fronting upon McCormick road. The additional acreage is provided to permit future expansion when increasing population demands increased facilities. Tests are now under way to gauge the machinery and other operating equipment to insure full efficiency when the big plant begins its continuous task of sewage purification.

The capacity of the north side works is 400,000,000 gallons of sewage daily, treated in three batteries, each containing twelve activated sludge tanks, each 420 feet long. The activated sludge principle of treatment to be applied here is a bacteriological process differing from the Imhoff tank method, employed in other sanitary district plants now under operation, in that compressed air is used to oxidize the sewage in the tanks and to keep it agitated.

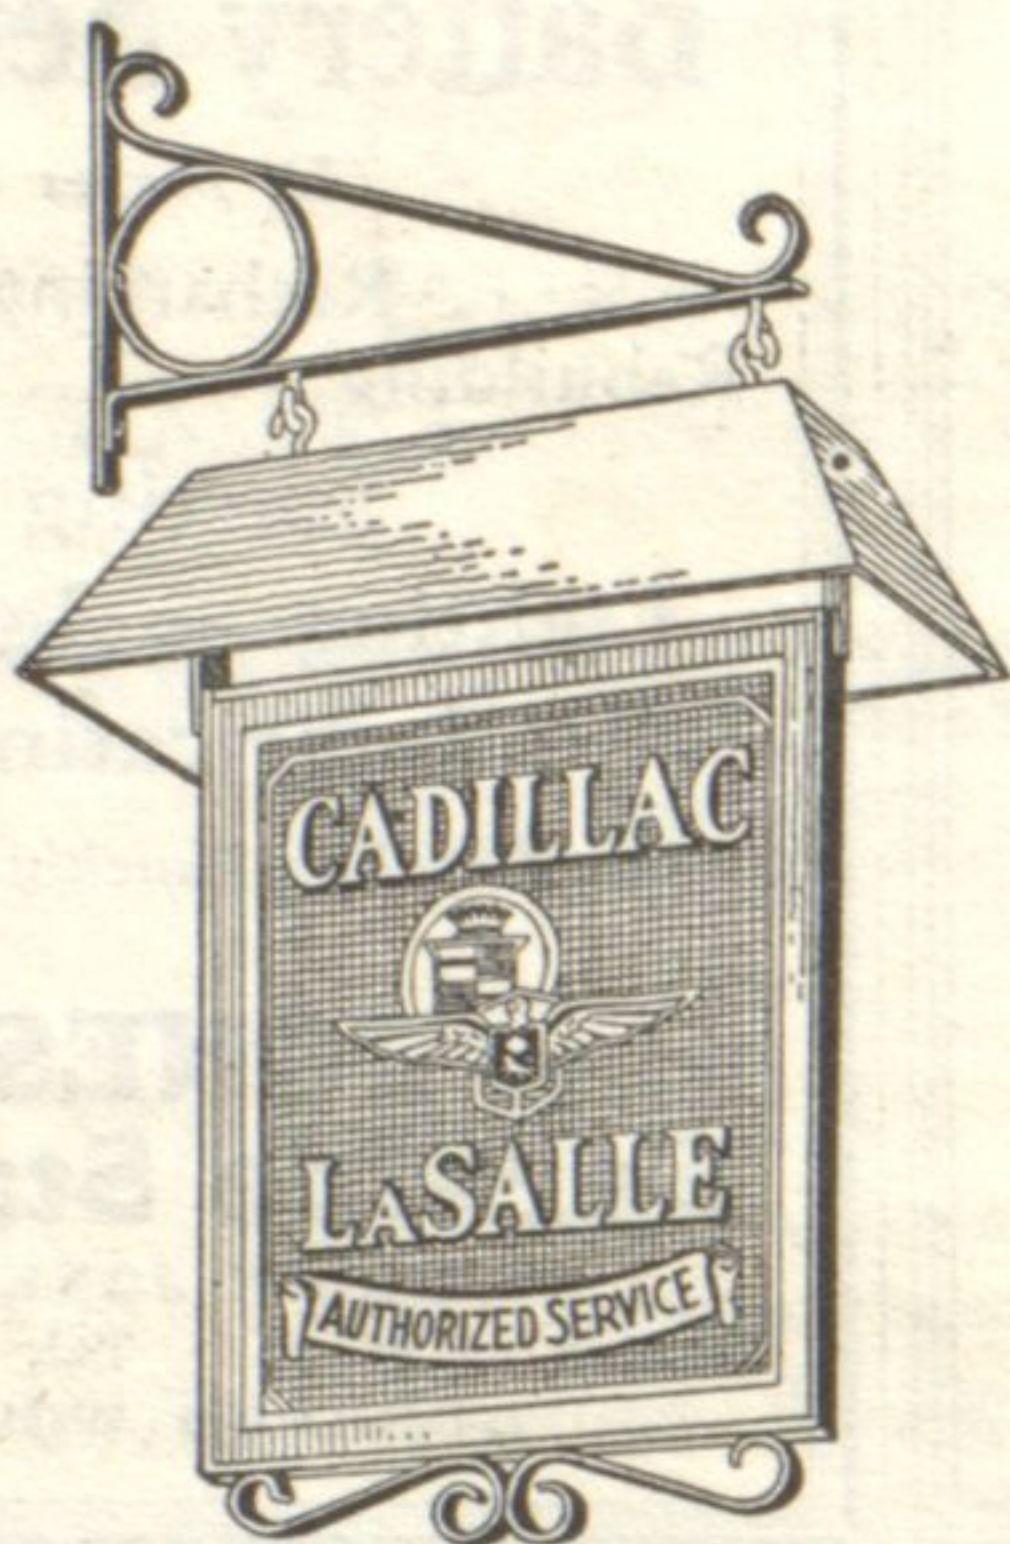

The plant itself, exclusive of the treatment tanks, consists of five separate structures conveniently grouped. These are the administration building, the service building, the pump and blower house, the operating galleries and the electrical substation. All of these structures have been built upon an attractive architectural plan which creates a pleasing impression without detracting from the utilitarian value of the buildings.

In addition there will be an absolute absence of all objectionable features. Operation of the plant will be an odorless process and with the extensive landscaping which is to be applied around the plant grounds, the entire project will in no way suggest from an exterior view that it is the world's largest artificial sewage treatment unit.

WASTED FOOD

One million dollars worth of food is wasted every day by the American people, according to an estimate of the National Conference of Marketing and Farm Credits. Enough food is wasted annually in this country because of premature spoilage to feed a city the size of New York, it is said.

Mr. and Mrs. E. A. Kaumeyer of 601 Linden avenue are spending the season at their summer home at Chikwaukee.

Wherever the service sign is seen, there are men and tools to help your Cadillac and La Salle give you the motoring satisfaction which is universally known as an outstanding feature of Cadillac-La Salle superiority

*Not guess work—
but the guaranteed
work of craftsmen*

You, too, will find it advantageous to use authorized Cadillac and La Salle service, whether your car needs adjustments, lubrication, repairs, refinishing, or re-upholstering. This authorized service means supervised service such as your car would receive at the Chicago Branch of Cadillac, located at 2301 South Michigan, or at the factory in Detroit. Our service here is a part of the nationwide Cadillac and La Salle service, as dependable as these two splendid cars.
