

Dependable Operation with a **McILVAINE** OIL BURNER

Safe—

The McILVAINE is 100% safe. There is no gas pilot or electric ignition—no complicated starting and stopping mechanism. The only flame is the oil flame—the only control is the mechanical control of the supply of oil and air. You simply start the McILVAINE in the fall and shut it off in the spring.

Quiet—

A noiseless motor-driven unit supplies a positive feed of air and oil, proportioned and controlled by the McIlvaine Flame Controller. There is no noise or roar caused by a change of temperature because the McILVAINE burns quietly with a continuous even flame.

Clean—

The McILVAINE does away with dust, dirt and soot. The drudgery of coal bin and ash pile is a thing of the past. Clean, quiet, even heat will be yours, if you install this superior type of oil burner.
