### Christian Science Churches

"Mortals and Immortals" was the subject of the lesson-sermon in all Churches of Christ, Scientist, on Sunday, November 18.

The golden text was, "This corruptible must put on incorruption, and this mortal must put on immortality" (I Cor. 15:53).

Among the citations which comprised the lesson-sermon was the following from the Bible: "For ye are all the children of God by faith in Christ Jesus. There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Christ Jesus" (Galatians 3:26, 28).

The lesson-sermon also included the following passages from the Christian Science textbook, "Science and Health with Key to the Scriptures," by Mary Baker Eddy: "Man is not God, but like a ray of light which comes from the sun, man, the outcome of God, reflects God. Mortal mind and body are one, and that one is called man; but a mortal is not man, for man is immortal" (p. 250).

### Pneumonia Strikes When You're Down; Expert's Warning

Characterizing pneumonia as a "bully" that attacks victims whose physical resources are already depleted from some other cause and pointing out that the prevalence of this disease is likely to increase heavily upon the heels of a mild respiratory infection which is now epidemic in Illinois, Dr. Isaac D. Rawlings, state health director, declared in a statement issued this week that pneumonia can be prevented on a large scale by the application of reasonable precautionary measures. These include going to bed with first symptoms, keeping warm and talking your time in convalescing from colds, influenza, measles and the like, favoring the lungs with frequent fresh air baths day and night, satisfying the appetite with enough calories and vitamins, avoiding prolonged and too sudden exposure to severe weather phenomena, encouraging bootleggers to change their illegal avocation and sleeping enough to produce a refreshed and rested feeling at rising time.

"Pneumonia prevalence has doubled in the last sixty days and is likely to increase no less rapidly for the next sixty as cold weather advances with shorter days and the indoor, crowded life that these conditions encourage," Dr. Rawlings said. "In October 848 cases were reported against 589 in September and 344 in August. Last year there were 662 cases in October and 1,484 in December. Present indications are that the disease will follow its usual course of increasing rapidly in prevalence during the next two months.

"Pneumonia rarely ever attacks a person as a primary infection but almost invariably follows some other ailment or disorder which has reduced the physical resources of the body so that resistance against pneumonia breaks down. Thus the present epidemic of a mild respiratory infection will pave the way for pneumonia.
