*Telechron*

The ELECTRIC CLOCK

The manner in which the Telechron timekeeper has been accepted is marvelous. Hundreds of persons have visited our display room to see this new timekeeper. Our sales are mounting every day . . . for those who see this latest electrical development are enthralled by its many advantages. Soon we will have sold 300 Telechrons in Winnetka.

**HERE'S HOW!**

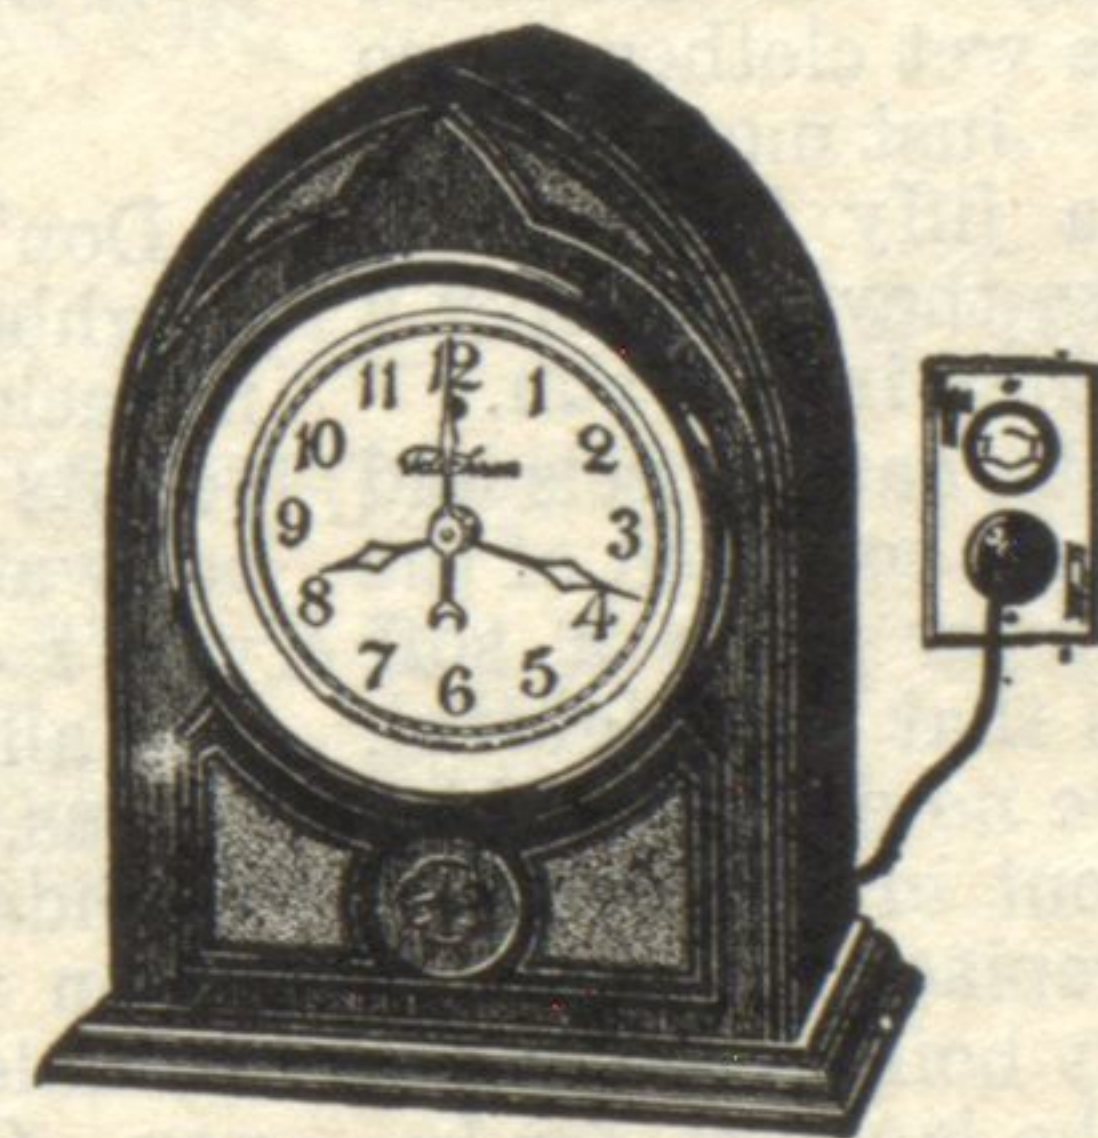

Time service by electricity in your home or office is possible because of the special instruments which we have installed in our generating station to keep our great turbines running at 100% accurate speed. These instruments are checked daily with radio time signals.

The Telechron is an extremely accurate electric clock operated by a tiny motor that keeps "in step" with the speed of our big turbines. By keeping our turbines running at the correct speed, we cause your Telechron and every other Telechron on our lines to keep correct time — whether five or fifty thousand of them!

**In Newest Clock Case**

Here is a Telechron in the new Bakelite case. It will not scratch, mar, discolor or break. It is good for a lifetime.

Finished in dark walnut with a decorated case. A beautiful clock that will add to any room and be a serviceable timekeeper.

**\$19.00** Cash

**ALL MODELS ON DISPLAY**

Attractive cases in many finishes of mahogany, Lacquer, Ivory, Chinese Red, or Apple Green. These models may be seen in the offices of the Water and Light Department of the
