MARCH 24 1904

WHOLE NUMBER 838.

## A NEARLY SHOWING —OF— New Things

You know it. Don't let other  
ting your spring goods. Our  
ay now from all parts of the

**NEW PRINTS** is in. The  
te, none of last year's leavings  
v. goods, bought at old prices  
dent of the use in the cotton

**WEST THINGS**  
Silks, Linen Affects, Cambrics.  
Ribbons.

**& PETERS.**

Three Canadian Power Companies  
are developing 350,000 horse power  
at Niagara Falls.

Canada's foreign trade for the half  
year ending Dec. 31st, 1903, amounted  
to 258 million dollars.

Compressed peat will shortly be  
urned out at the rate of 60 tons a  
day at Farnham, Quebec.

The city of Kingston by an almost  
unanimous vote has decided to pur-  
chase from the private company the  
gas and electric plants. There were  
only 37 adverse votes on the by-law  
to raise \$182,000 for the purpose.

Particulars have been published of  
a wonderful new motor invented by  
Mr. Peter Thornley, a Burton-on-Trent  
engineer. The invention is con-  
sidered of such importance that its  
development may result in express  
railway engines running at twice  
their present speed at only half the  
cost, and in Atlantic liners crossing  
from Liverpool to Halifax in 3 days.

Jas. J. Pearson, registrar of North  
York, died at his late residence New-  
market on Saturday last, at the age  
of 76 years. Deceased had been regis-  
trar since the office had been created  
in 1863, a period of 41 years. His fa-  
ther was a Pennsylvania Quaker  
who came to Canada in 1800 and estab-  
lished between Newmarket and Aurora.  
The departed was a leading member  
of the Friends' church there, and was  
highly respected by his many rela-  
tives and acquaintances.

"Talk about Yankee shrewdness,"  
said the travelling man. "I was in a  
little tavern up in Connecticut not  
long ago, and a farmer came in with  
egg to sell. The transaction took  
place in the bar-room of the estab-  
lishment. The proprietor agreed to  
take two dozen, and when the farmer  
came to count over the contents of  
his basket he found that he had two-  
and-a-half eggs. The proprietor wanted  
the extra egg thrown in for good mea-  
sure. The farmer didn't see it that  
way, and they argued the matter. At  
last the proprietor said he'd take the  
two eggs, give the man a drink and  
all the square. The farmer agreed and  
obliged him money. 'Now, what'll  
you have?' asked the proprietor. The  
Yankee farmer was ready with his  
reply. 'Sherry and egg,' said he."

On Saturday night last Mr. F. W.  
Wolffe of Barrie, was awokened  
at 1 a.m. by the opening of his bed-  
room door. He jumped out of bed and  
was crossing the floor picked up an  
iron bar. On reaching the door he saw  
two men, one with a lifted lamp  
and the other with an uplifted spade.  
Wolffe did not stop to ask any ques-  
tions but threw the bar and struck  
one of the intruders on the head. The  
man fell to the floor the blood spurted  
across the hall and also spattered  
on window frame. The other intruder  
ran downstairs and escaped thru  
front window, by which means  
the entrance had been made to the  
house. The wounded man also escaped  
raining calling upon his compa-  
nion to return to his assistance. Two  
statements have been made in connec-  
tion with the affair, and the parties  
are committed for trial.

Rev. Dr. Chambers, of Toronto,  
will preach missionary sermons next  
Sunday, morning and evening, in the  
Methodist church here. As he is an ex-  
cellent pulpit orator it will be a treat  
to hear him.

Forty-nine years ago, it is said,  
it began to snow on the 16th day of  
October, and the snow remained till  
the following April. In 1860 there fell  
seventeen inches of snow on the 17th  
of November, and snow fell nearly  
every day for the next six weeks un-  
til there was about four feet on the  
level. There was no great flood in the  
spring after either of these winters,  
In 1863 there was sleighing up to the  
16th of April. After these reminiscences,  
what is the matter with the present  
winter?

A bill will shortly be brought down  
in the Legislature by the Minister of  
Education extending the plan of  
boards of education to every place in  
the province which has a high school.  
The present Act is limited to Toronto  
and is compulsory. The new one will  
extend to every place where there are  
two boards—that is, a public school  
and a high school board, which can be  
amalgamated into a smaller one, and  
it will be optional with the ratepayers  
whether they adopt it or not.

On many occasions men have at-  
tempted to corner some article of gen-  
eral consumption, but failure has re-  
sulted in most cases. The raw cot-  
ton was recently manipulated by  
Daniel J. Sully and the price forced  
considerably upwards, but all or, sud-  
denly the manipulator had to announce  
that he was unable to meet his en-  
gagements, and down went the price  
with a rush. Speculators are simply  
parasites living on the laboring peo-  
ple. They create no wealth, but dis-  
turb the market prices of comodities  
and injure the general business of  
the country.

Humanity, which abhors in a  
heat of 90 degrees, and withers and  
dies if the mercury runs up to ten or  
fifteen degrees higher, finds it hard  
to realize a heat of 5,400 degrees, yet  
that is the heat developed in the com-  
bustion of thermite, a heat which  
welds together pieces of the most pon-  
derous machinery, which makes it pos-  
sible to melt iron castings weighing  
tons, which heretofore had to be re-  
duced at great expense of labor and  
time, which can unite iron rails so  
perfectly that the joining can scarce-  
ly be seen or felt and a rail can be  
made miles long instead of 50 or 100  
feet at the outside.

The drug cocaine is being much used  
by the natives of India, and deter-  
mined efforts are being made to pre-  
sent its general distribution. A 10  
thousand dollar shipment to Calcutta  
recently was refused entrance at  
the customhouse ordered to be sent  
back to England. In England it is usu-  
ally administered by injection, but  
in India it is mixed with a native  
chewing gum which seems to make  
it more palatable. The abuses of co-  
caine by the natives grew to such an  
alarming extent that two years ago  
a measure was introduced prohibiting  
the sale except by licensed persons  
and prosecutions have been frequent  
on account of violation of the law.

Bacteriology is raising new ter-  
rors for employers under the Employ-  
ees Compensation Acts—at least in  
England, where the lower courts have  
decided that the dependants of a  
workman who died from an infec-  
tion causing malignant pustule while  
engaged in sorting wool are entitled  
to damages under the Employers'  
Liability laws, as in the case of ordi-  
nary accident not due to the employ-  
er's own carelessness while at work.  
The bacillus from the wool lodged in  
the workman's eye, and it was con-  
tended on behalf of the employer that  
the case involved a disease risk which  
was to be distinguished from an ac-  
cidental risk, but the court held that  
the disease excluded by law meant one  
which was already present in the  
workman, and there was nothing to  
show that this workman carried a  
disease with him to his work. The  
judge could then see no distinction in  
the principle between being hit by a  
deadly bacillus while at work and be-  
ing accidentally hit by a spark from  
an anvil or the accidental squirting  
of a poisonous liquid into the eye. It  
is reported that the case is to be car-  
ried to the House of Lords on final  
appeal. If flying bacilli are to be classed  
with flying fragments of breaking  
machinery under the Employers' Li-  
ability Act, a liability is incurred prac-  
tically without limit, for there are  
said to be no limits to the number  
and deadly possibilities of the  
active army of the bacilli.

## IF COUGHS are Chronic

or if there is any persistent irritation  
of the bronchial tubes, or if  
lowered vitality and loss of flesh  
indicate more serious troubles, there  
is need of a remedy of a constitu-  
tional nature.

### Our Emulsion of Cod Liver Oil

with Wild Cherry and Hypophos-  
phites is the remedy to use. It is  
more of a food than a remedy, but  
a food that furnishes material to  
build up the nervous system and to  
increase flesh and vitality. This is  
the standard preparation for all  
chronic lung and bronchial trou-  
bles and for wasting diseases. Our  
Emulsion is no better than others,  
except in the matter of freshness,  
which is important. Price 50c.

Market Drug Store.
