YOU Put the Vulcanite Hexagon Slab Through These Severe Tests

Get a sample of Vulcanite Hexagon Slab Shingles from us. Put it through the tests listed here. They are more severe than your roof will ever be called upon to undergo.

1. Lay the sample on a hot radiator for 12 hours—see if it will melt or dry out.
2. Lay the sample on ice for 12 hours—then pour boiling water on it. See if the sudden extremes of temperature affect it in any way.
3. Soak the sample in water for 12 hours—see if its weight shows any absorption.
4. Immerse the sample in nitric, sulphuric, muriatic or other ordinary acid—see if it is affected.
5. Lay a glowing hot coal of fire on the sample—see if it sets fire to the sample.

Get this sample from us before building or re-roofing. Prices and estimates on request.

Leslie Odgen nearly lost one of his cows in a similar manner, the poor old milker being rescued by the aid of a horse pulling her out. It was a cold dip, for any beast.

A goodly number attended the revival services held at Bethesda, which proved a good success.
