Get the Most for Your Work and Money

I know you've a big investment tied up in your fields of corn and your beef and dairy cattle. I want to see you get full returns for this money.

That's why I recommend one of my "Toronto" Wooden Silos. It's built to retain all the tasty food value of the corn—and cattle fed on this kind of silage will give more milk and make better beef.

"Toronto" Silos are durably built of selected spruce, double tongued and grooved to exclude the air, treated with creosote to lengthen their life. The Silo is thus protected against dry or wet weather, freezing, thawing or any action of the silage. The special Hip Roof, too, gives 15% extra capacity.

Get full value for your investment. Let's talk it over or get some of my free literature.

THE IDEAL SYSTEM OF FARMING

Every farm regardless of the method of farming practiced or of crops raised, should have at least a few good milch cows to provide:

1. Enough milk, cream and butter for home use.
2. Enough butter milk to raise some calves, pigs and chickens.
3. Enough Cream to sell to pay the current living expenses.

The most profitable way to market your output is to ship the CREAM to

7,300 Days Is the Average Life of a MELOTTE Cream Separator

They last for twenty years or more and skim as closely then, as when new. Why? Because the suspended bowl remains vibrationless. You cannot afford to waste cream by leaving it in the skim milk when the Melotte costs but one and a quarter cents per day to own.

Your daily loss may be ten times this amount. Better stop it right now before the heavy milking season starts, when your loss will be greater. Get a genuine Melotte without delay.
