Antiseptic Weed Cures Ringworm

Lowly Plant May Bring \$38 a Ton — Discovered As Successful Remedy For Skin Ailments.

Dr. J. B. Burt, chairman of the Nebraska University Pharmacy Department, announced last week the discovery of a new antiseptic derived from a weed so lowly that Western Nebraska farmers do not deign to name it.

The new drug is chloromercurocarvacrol, which Dr. Burt said gives great promise as a possible treatment for such skin diseases as athlete's foot, ringworm, psoriasis and impetigo.

Preliminary tests in the University student health clinic, in the University of Wisconsin student health clinic and by Lincoln students indicate the compound is a successful remedy for these skin ailments, its discoverer said.

Unpalatable to Livestock. He explained the antiseptic is made from the mintlike weed, monarda pectinatif, which grows profusely in Western Nebraska. Farmers there have no special name for it, except mint. Dr. Burt said, but consider it a pest because its pungent flavor is unpalatable to livestock.

He estimated the weed would be worth \$38.80 a ton at the market price for carvacrol if the new antiseptic becomes an accepted remedy. A ton of the weed yields five pounds of oil, from which 3.88 pounds of carvacrol may be extracted.

Carvacrol, the pharmacist explained, is the liquid isomer of thymol, familiar as an ingredient of mouth washes, toothpastes, powders and gargles. Its use as a germicide is comparatively recent.

Island In Sky Is Not Isolated

Explorer Believes "Lost World" Search Undertaken a Few Centuries Too Soon

The expedition of the American Museum of Natural History to explore Shiva Temple, near the north rim of the Grand Canyon, may have been undertaken a few centuries too early, according to a report submitted by Dr. Harold E. Anthony, leader of the party, to F. Trubee Davison, president of the museum. Examination has determined, the report says, that the present-day mammals of Shiva are indistinguishable from those on the adjacent canyon rim.

First Humans To Ascend. Shiva Temple, formerly a promontory projecting from the rim, was sliced away by erosion 20,000 or more years ago into an isolated plateau. Its steep walls suggested the possibility that animal life might have survived under peculiar circumstances, removed from the influences that affected the evolution of neighboring species, remotely resembling the "lost world" of Sir Arthur Conan Doyle's imagining.

This prospect was discussed for more than twenty years — for, as far as was known, no human being had scaled the plateau before Dr. Anthony's expedition made the attempt.

The isolation of the temple proved less complete than had been anticipated. The party remained on the plateau eleven days, and obtained more than seventy-five specimens of animal life. Traces of human visitors also were found.

Evolution May Yet Work. "Perhaps as time goes on," said Dr. Anthony, "and erosion gnaws away the connecting ridge, the present dwellers on Shiva, active as they are, will find it is not worth while to try to cross back and forth, and

then evolution may begin to work on this relatively small population. In which event, our expedition will seem to have been some centuries too early, but until some one went to the top and secured the mammals this could not be known."

Wolf Breaks Fang On Rifle Barrel

Tooth Slash Quarter-Inch Deep Left by Animal

Members of the Algoma Wolf Club studied the barrel of Bill Bradshaw's rifle when he came back to Sault Ste. Marie and decided it was lucky for Bradshaw the wolf he dragged 300 yards by a dog chain last week didn't connect when he tried to savage him.

As Bradshaw jerked the wolf along the animal seized the barrel of Bradshaw's rifle and examination showed an indentation almost a quarter of an inch deep.

Marks In The Steel. One of the wolf's fangs was apparently broken by the bite for Gilbert Murray, with Bradshaw at the time, said he was struck on the cheek by an object he later found was one of the wolf's fangs. Bradshaw and Jack McDonald caught the wolf by holding it to the ground with a forked stick.

From Mount Zion 30 miles east of here, came word the district farmers didn't need help from the club in handling wolves. Freeman Burdard said he saw a wolf near his farm home when he got up the other day. Without bothering to put on his shoes Burdard ran outside, grabbed a stick and chased the wolf from the yard.

But they don't just chase wolves as Walford E. Duff, 16, reported he killed one with a .22 rifle and James Thom, Sr., killed another with a trap.

SCOUTING Here There Everywhere

A brother to every other Scout, without regard to race or creed.

The Boy Scout Santa Claus of the Toy Repair Shop at Calgary, had a real surprise when he received a letter from a group of children at Airways, a rural district 175 miles northeast of Calgary. The request was, not for toys, dolls or story books, but for school books. Ran the letter:

"We have had poor crops for six years around Airways and Hughenden. There are children here who want to study, but they have no school books and no money to get them."

Mention of the appeal in the Calgary Herald brought prompt response, and it is certain that these stout-hearted children of the prairies will receive not only the desired school books but toys and other gifts as well.

A first aid station for motoring casualties has been established by British Rover Scouts at Bignell's Corner on the Barnet By-pass road, near Barnet. The station, which cost \$300 to equip, is manned every Saturday afternoon and evening and all day Sunday. Over 30 Barnet Boy Scouts qualified to wear the St. John Ambulance Association badge take turns on duty. The roads in the vicinity have been the scene of numerous accidents.

Approval of the Boy Scout Movement in Greece, and assurance that he will do all in his power to further its success, was expressed by Prime Minister Metaxas, following a parade of Scouts at Patras.

Leading Bankers Review Canada's Economic Outlook

BANK OF MONTREAL ANNUAL MEETING Confidence Expressed in Country's Capacity for Recovery

An impressive record of strength and of expanding business in keeping with the marked improvement of trade and commerce throughout the Dominion during the past year was presented at the 120th annual meeting of the Bank of Montreal recently held in Montreal.

In viewing business conditions over the wide territory in which the bank operates, Sir Charles Gordon, the president, said that these had much improved and were a happy contrast with the conditions of but two years ago. The one really serious handicap in those portions of the Prairie Provinces where drought caused total or partial loss of the crop.

Canada, he said, had been demonstrating in the past year a remarkable resiliency in productive enterprise.

As instances of this, he referred to the immense growth of gold production and of the output of industrial metals remarking that with the exception of iron, Canada was now the world's largest exporter of base metals.

Canada's Manufactures Worth Three Billions

He further pointed out that whereas Canada was until quite recently regarded as a country devoted almost entirely to agriculture, today agriculture provides 35% of the exports and other forms of industry the balance. Canada now employs 600,000 people in 30,000 workshops, mills and factories, and the annual value of its manufactured products amounts to more than \$3,000,000,000.

In concluding his remarks, Sir Charles, while not attempting a forecast on the Canadian business outlook, expressed his confidence

in Canada's "remarkable capacity for recovery," which, if not unduly affected by international disturbances, would, he felt, mean a continuance of the better times which Canadians had experienced during the past year.

Commercial Loans Show Increase. One of the most important features of the financial statement presented by Jackson Dodds, on behalf of himself and his fellow general manager, G. W. Spinney, was the increase shown in current loans in Canada of more than \$23,000,000 to \$182,500,000. For the year ended September 30th, the current loan of all the banks had increased by \$75,500,000. While the increase was welcome, he said it was not commensurate with the growth in the volume of business and the improvement in commodity prices.

Bank's Assets 79.53% Liquid

The assets of the bank, standing at \$829,600,000 were the highest since 1929. Of this amount \$599,000,000 represented quickly available resources, equal to 79.53% of liabilities, to the public, amounting to \$752,736,000.

Among other highlights, the statement presented by the general managers showed that deposits by the public had increased by \$28,000,000 to \$681,000,000. Commenting on this item, Mr. Dodds said: "Despite all that is written and said nowadays on the subject of 'loans crowding deposits,' 'fountain pen money' and 'monetizing' assets, including what is described as 'our cultural heritage,' it is safe to say that not one of our customers, whose balances make up our total of deposits by the public, has any doubt whatsoever as to how his or her deposit came into being."

Dice Is Oldest Game In History

It Was the Forerunner of Dominion, Which First Became Popular in the 18th Century.

Dice are older than history. They are always turning up in ancient burial grounds and on the sites of vanished civilizations, and the remarkable thing about them is that their shape has not altered in all the thousands of years they have been known.

Homer says they were invented in the Greek camp to while away the 10 years' siege of Troy. Plato believed that they were a gift of the Egyptian god, Thoth, to mankind. The Greeks certainly knew them. They threw three at a time out of a conical beaker. Three sixes were called Aphrodite, after the Goddess of Love. Three ones were called the "dog."

Known to Savage Peoples. Savage peoples from the earliest times to the present day have gone off their heads over a throw of the dice. The ancient Germans used to stake their liberty on it; so did the modern North American Indians.

The Island of Java, which possesses forty-three volcanoes — many of them still alive — is 600 miles long, and between 140 and 150 miles wide, and runs almost due east and west. It is odd to record that the island has a population of 42,000,000, or over 2,000,000 more than the total population of England and Wales. A large percentage of the Java people are Chinese, and at least one man in every hundred on the island is a priest.

More Money to Spend. "There should be a good market for the Western Canada turkey this Christmas. Economic conditions are better; people have more money to spend. Canada has supplied turkeys to Britain for five years past and there is every prospect of her continuing to do so. It is a quick trade. The birds must be fattened and finished and got to the London market in a very few weeks. This is the principal market for them now — apart from the domestic one and from some selling to the United States."

New and Better Kinds of Cheese

O.A.C. Is Aiming to Produce Them; Research Work To Help

Close co-operation between the laboratory and field work in the industry is the only way to bring about better types of cheese, according to W. H. Sproule, professor of dairying at the Ontario Agricultural College, Guelph.

He told the closing session of the 10th annual convention of the Central Ontario Cheesemakers' Association, at Belleville this month, that the College will extend its research into new types this year. Particular study is being made of Roquefort and Camembert cheeses, he said. Also under study is a "green cheese" of a new type.

Delayed by Back Concessions. The first problem of the cheese industry, M. H. Hudon, chief of the dairy branch in Quebec, told the convention, was the butter-fat production of the dairy cow owned by the back-concession farmer. This "most important factor" is delaying the continued progress of the dairy industry of Canada," he said.

Earlier, Allan C. Fraser, secretary manager of the National Dairy Council, said cheese-making was the "balance wheel" of the dairy industry. He felt improved conditions now prevailing in the industry would be "cumulative and permanent."

This Year's Crop Is Worth Less

Decline of 10 per cent in Value is Noted in Dominion — Prices Are Variable

OTTAWA. — The gross value of Canadian field crops in 1937 was estimated at \$556,382,000, by the Dominion Bureau of Statistics. It represented a decrease of \$65,098,400 or 10 per cent, from the 1936 harvest, but, at the same time, it was higher than any other year since 1930.

Wheat One Factor. Lower production of wheat and reduced prices for potatoes were mainly responsible for the decrease in the value of 1937 production. The wheat crop of 1937 was 47,000,000 bushels less than in 1936, and, while the average farm price for this year's crop was slightly higher, the gross value of wheat production in 1937 was estimated at \$179,810,000, a decrease of \$34,697,000 or 16 per cent, from the estimated value of the 1936 crop.

West Suffers Decline. Saskatchewan suffered an unparalleled decline of \$101,000,000 or 68 per cent in the gross value of field crops. In Ontario and Quebec, potatoes were the most important cash crop to suffer loss in value, as compared with the 1936 crop. The lower value for potatoes in Ontario was partly made up by a gain in the value of the wheat crop. Lower values of the feed crops in these provinces had little effect on the farmers' cash income, and where feed is purchased, the reduced feed prices aid livestock feeding.

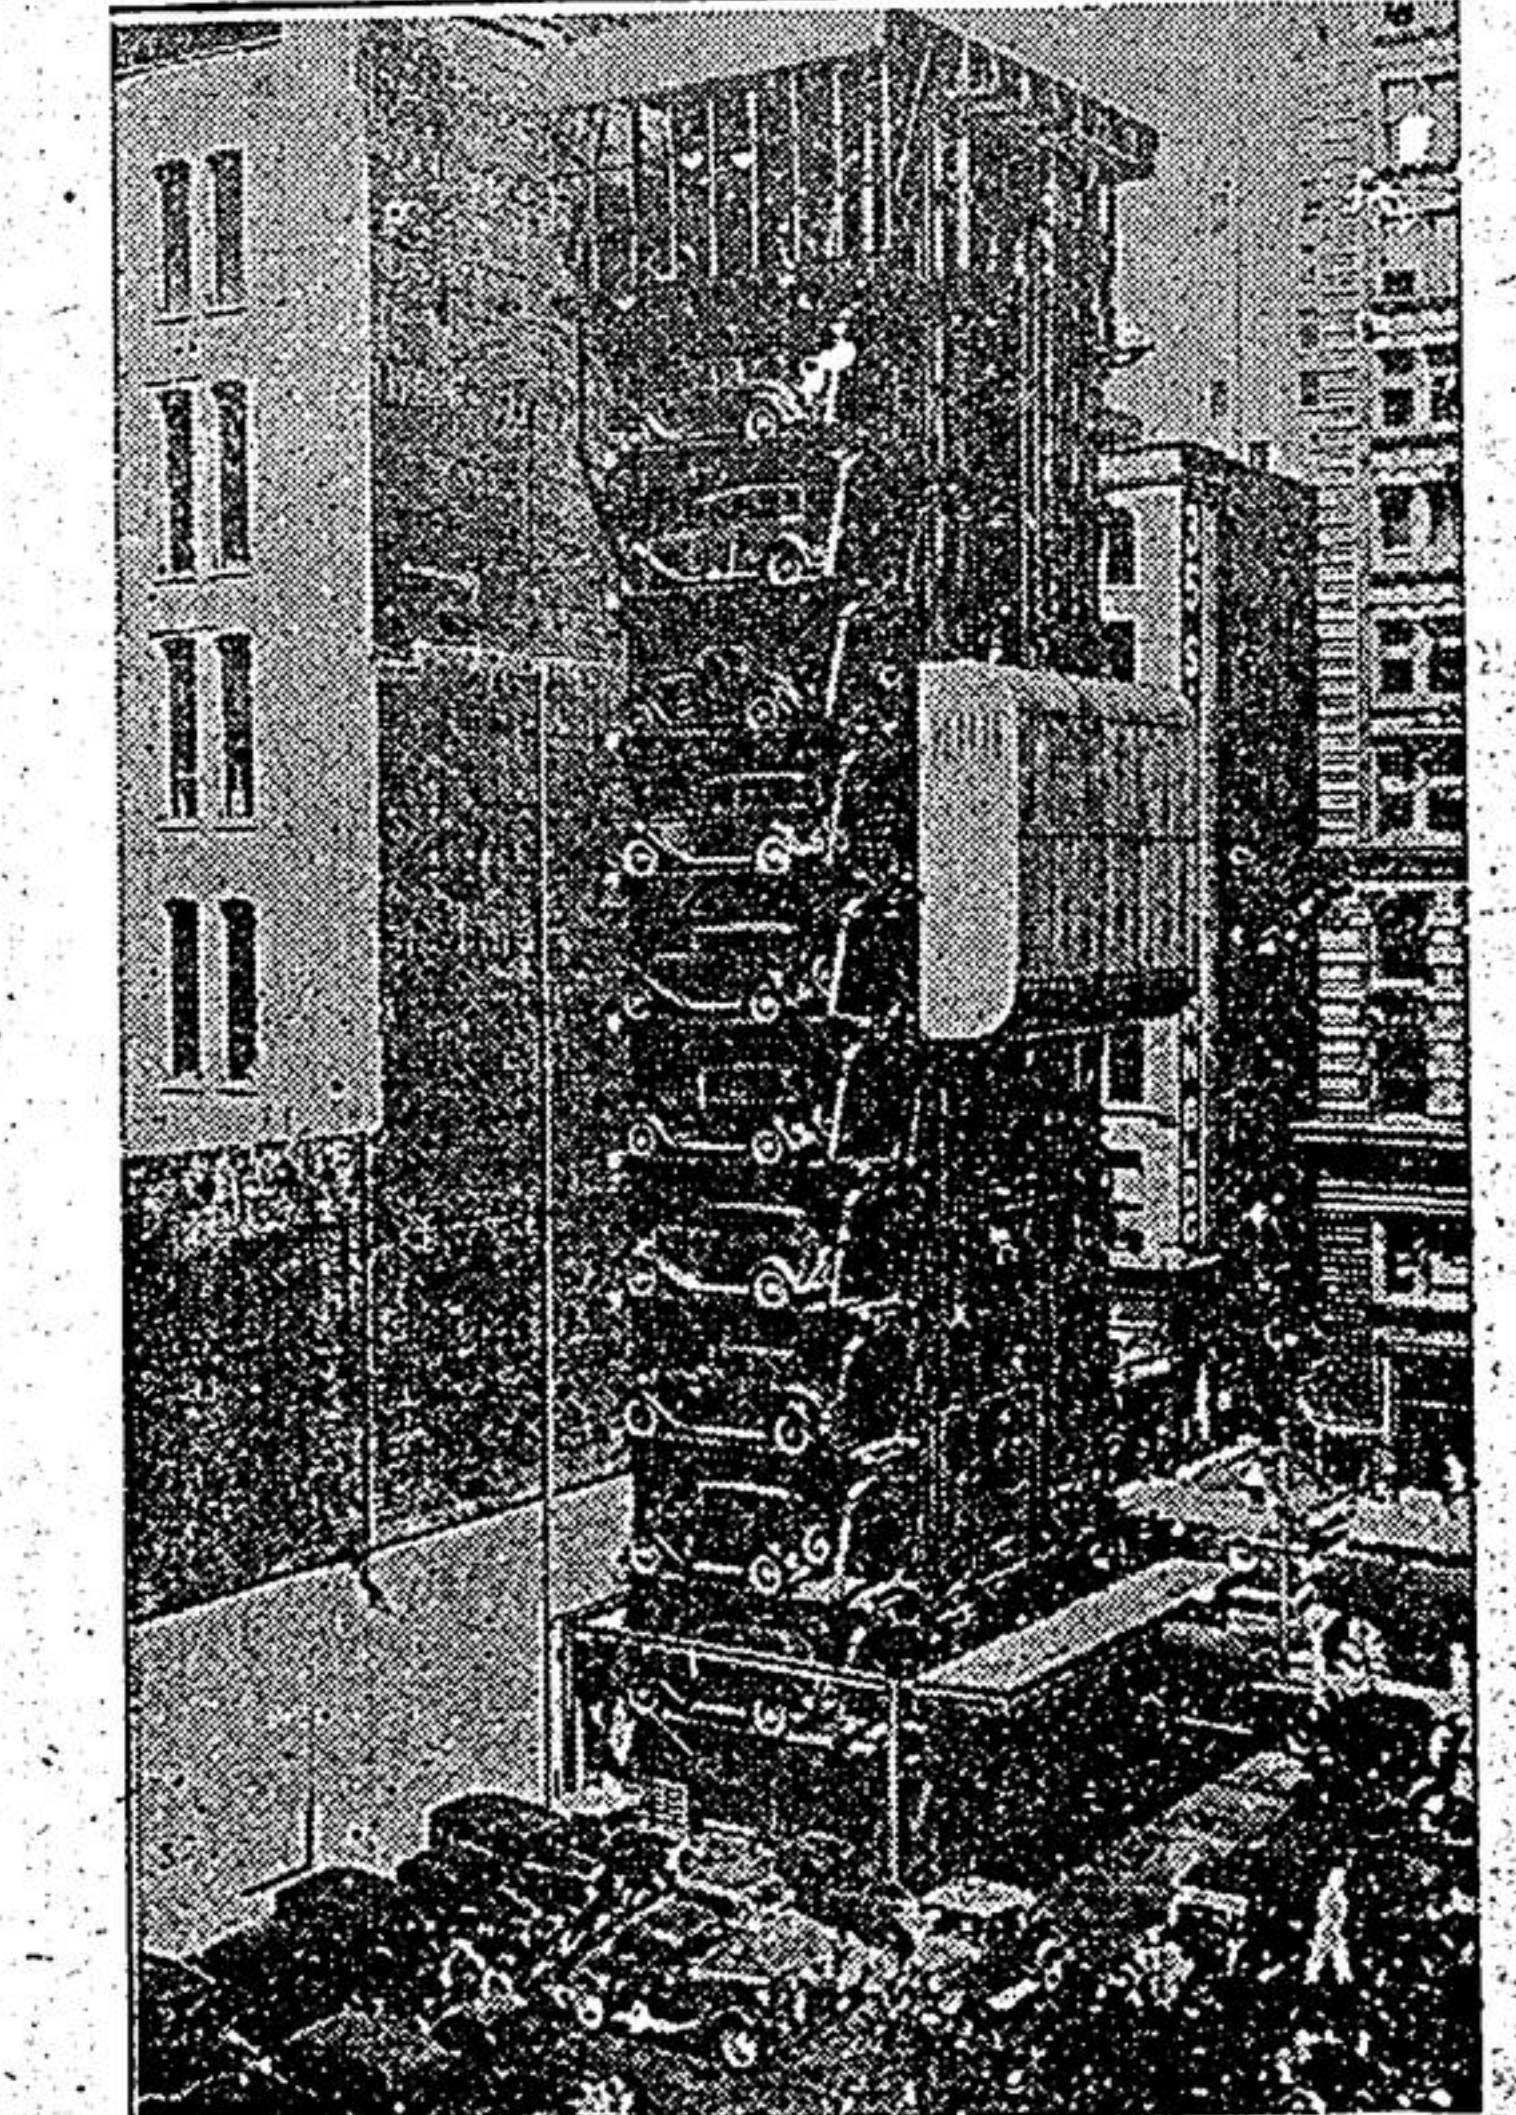

A Scottish Boy Scout in kilts at the head of the parade was the feature of a Scout celebration at Patras, Greece. The parade included mounted Scouts, cyclists, hike, trek carts, ambulance Scouts, Sea Scouts and Wolf Cubs.

Famed Frenchwoman Sails for Home

Mme. Elsa Schiaparelli, French dressmaker with originality, waves goodbye to this Continent after a short visit here.

A System of Vertical Parking

One way to prevent a parking problem is to hang the cars on the side of a wall, as has been done in this Chicago parking space. The chute in midair is the conveyor which places cars in a space until they are called for.

Britons Appreciate Canadian Turkeys

There Should Be a Good Market For Our Birds on Old Country Markets This Christmas.

The Canadian turkey, hundreds of thousands of them, will vie again this year with those of Britain, of Northern Ireland, of Yugoslavia and of Bulgaria, as the chief delight of the United Kingdom's Christmas dinner-table.

"Turkeys worth one million dollars will be imported into this country before Christmas," an authority in close touch with the trade declared. "They come from Western Canada and for the last five years have held their own on the British market. They are of high quality and generally appreciated."

Gamble With Weather. There is something of a gamble, however, about the price they bring at Smithfield. It depends as nearly everything does in this country, on the weather. If there's frosty weather, the birds, which arrive in a chilled state, sell briskly, at good prices. But the weather is warm and moist or if it is foggy, then shrewd buyers, realizing the turkeys cannot be put into cold storage, wait for the fall in price that comes as an inducement for quick sale.

More Money to Spend. "There should be a good market for the Western Canada turkey this Christmas. Economic conditions are better; people have more money to spend. Canada has supplied turkeys to Britain for five years past and there is every prospect of her continuing to do so. It is a quick trade. The birds must be fattened and finished and got to the London market in a very few weeks. This is the principal market for them now — apart from the domestic one and from some selling to the United States."

Known to Savage Peoples. Savage peoples from the earliest times to the present day have gone off their heads over a throw of the dice. The ancient Germans used to stake their liberty on it; so did the modern North American Indians.

The Island of Java, which possesses forty-three volcanoes — many of them still alive — is 600 miles long, and between 140 and 150 miles wide, and runs almost due east and west. It is odd to record that the island has a population of 42,000,000, or over 2,000,000 more than the total population of England and Wales.
