Thinks Term Should not be shortened

The St. Marys school board has done the unusual to come cracking down on this thing of letting the school youngsters down easily by shortening the school term, allegedly to allow the boys to assist in seeding operations on the farm. Come to think of it, what can such an average youngster do in the way of seeding? Ask any farmer for the answer. Then, as the seeding term lasts for but little over ten days, what is the foot-free youngster to do during the rest of the term? There is still another way to look at this thing. Going to school does not make a scholar. It's the training in the school or the university that does the trick, and such training takes time. We recall the results that ensued during the last war, when some school and college terms were shortened. The youngster "passed" under such circumstances, but in many cases proved utterly incompetent and consequently failed under life's stern test, of experience. A shortened term simply had not given him sufficient training. Educators who know their work assure us that education cannot be taken in or obtained hastily, war or no war. There are exceptions, of course, but they are in the class with hen's teeth.

The stand taken by the St. Mary's paper is sound, and while a boy can be of great value during seeding time, as the St. Mary's paper points out, this rush lasts but a few

days. The observation of this paper is that school boys and girls of the age of those attending Stouffville school, is that the term should not be shortened too much, if at all. Judging by the youngsters going about the streets every evening of the week in waves, they are not spending any overtime at home work to make up for a shortened term. Of course, as it has been pointed out before, some parents grouch because their children get too much and some because they get too little home work. The majority of people feel too little is given, which is due, we believe to the divergent opinions of parents.

#### When Should Stores Remain Open

Beginning next week, May 1st the stores in Stouffville will revert to their summer time-table of remaining open three nights a week, Tuesday, Thursday and Saturday evenings, and of course, remaining closed each Wednesday afternoon which is a year-round half-holiday to reimburse the clerks for the night work.

There is a good deal of doubt about the necessity of: remaining open on Tuesday evenings, as the crowd in town is usually small, and advocates of remaining closed are of the opinion that closing at eight o'clock promptly could at least be adhered to. However, this move could only come from the business men of the town.

At best eight o'clock is a nuisance hour for it spoils the evening for the merchant in case he wished to work at home, but it would give the dilitory buyer a chance. The opinion of this paper is that the stores may well remain open every Thursday and Saturday evening during summer months and that they should check carefully the Tuesday business. If not warranted, then close.

It is only the poor co-operation of the merchants to attend their own meetings when called, that prevented an adjustment of this trouble last week.

#### Motorists Save Anti-Freeze

With zero and sub-zero weather all over for this season and warmer weather just around the corner, garage and service station men are advising motorists to save the antifreeze in their radiators. The reason, of course, is that there is an anticipated shortage of this fluid. The advice is timely, for motorists will be changing to clear water shortly. However the conservation plan is not without its complications, if radiator alcohol is the anti-freeze that has been used.

Alcohol is temperamental and presents storage problems, because it is highly volatile and inflammable and for that reason cannot be stored for the summer in any old container that might be handy. The fire risk must be

considered. Unless the motorist has a suitable receptacle he may have difficulty in obtaining an approved container of the required capacity for his alcohol. Storing the inflammable liquid in glass containers is risky. If someone has a solution perhaps he will come forward. The warmer days are fast approaching and the seasons in their regular order do not wait for motorists or approved anti-freeze containers.

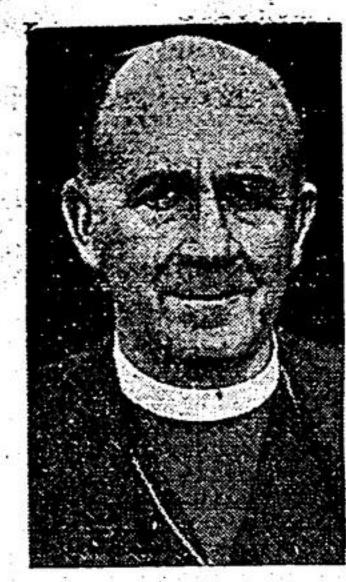

#### Such Simple Things at Potatoes

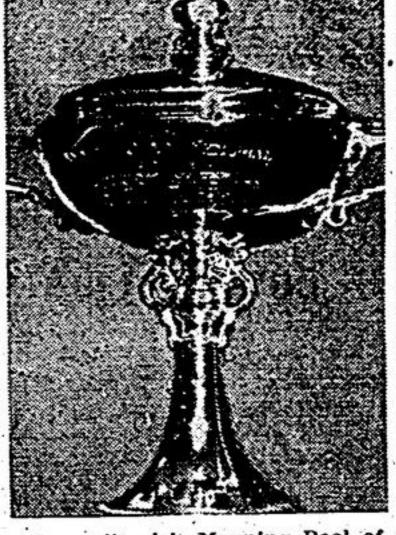

We imagine that every farmer is aware of the fact, but to some of the town gardeners of the greener class like the writer it will be a fact worthy of note that potatoes to do their best should be planted in this section of Ontario from early May to mid-June. Of course planting a little later is better than not getting them in at all, we imagine, but this year things should be done just right so that best production may be assured. There are other interesting points too about the potato business.

A farmer can have no assurance of a good marketable crop of high quality potatoes unless he uses good seed, states a bulletin on "Successful Potato Production in Ontario," issued by the Ontario Department of Agriculture, Toronto.

It is only by the use of good seed that Ontario farm-

Farmers observe the same blackout regulations as people in towns and cities. I am not sure that this is compulsory, but it is the wise thing to do. There are many instances in earlier months where hostile pilots have seen a gleam of light from a farm and have dropped a bomb on the chance that it might be a factory. There have also been some instances where farmers were attacked in daylight raids and their stock machinegunned from the air.

Farmers Are Given Protection

In many ways, the British farmer is probably better off than ever before. His hired man is in the same position. Prices of all kinds of farm produce are set by the Government high enough to ensure a profit. And wages of farm laborers are also set. When I was in England in October, the time was approaching when the minimum farm wages would be set for 1942. The hired men were asking for 60 shillings weekly, and seemed likely to get about 55 shillings, or about \$13.00.

Farmers' sons, if not entirely exempted from conscription, enjoy the same standing as munition workers. Farm help is scarce, of course. During the harvest months last fall, many experienced farmers, now with the Canadian Army in England, were sent to farms near their camps to help out. They did a good job. One Uxbridge, Ontario farmer reports that they were far better than any hired help he could get in his own country, working far longer hours ungrudgingly.

One of the Women's Auxiliary units in Britain is the Women's Land Army. It is not as popular as some of the other branches of the service, possibly because the khaki uniform does not look as well as the Air Force or the Women's Royal Naval Services. Their jobs may lack some of the glamour, too. But there is no doubt about their usefulness. I-suppose that in some cases they take the place of hired men, but those I saw. Main Street East. seemed to be working in threshing gangs, going from farm to farm in groups. ( ::
