

Will Replace Gasoline Burners at Army Camp

This may be a mechanized war but the fear of gas and tire shortages has decided Army authorities to experiment with horse drawn vehicles for general duty around camps. Here are pictures of the first horses purchased in this war by Munitions and Supply Department for the army. They are now in service at Petawawa Military Camp and were purchased from Gilbert E. Arnold, Grenville, Que., one of the largest dealers in horses in Ontario and Quebec.

Top picture shows the first group of 10 to go into service, posed with members of the purchasing board and the former owner: left to right, Dr. A. C. Burt, Simcoe, Dominion Veterinary Inspector; Sgt. Major T. Rodger, 4th P.L.D.G., a former cavalry unit; Gilbert Arnold, Arnoldwood Farms, Grenville, Que.; L. K. Crabb, who represented the Department of Munitions and Supply on the purchasing board; Capt. Graham Maybury, 4th P.L.D.G., military representative on the purchasing board and well known Ottawa horseman.

Centre picture shows a fine team of Percheron grades said to be the best in the group with Mr. Arnold and others of the purchasing board.

During a run through the country an over-zealous recruiting officer came across a young man milking a cow. "Why aren't you at the front?" he blurted out. "Cause there's no milk at that end," answered the farmer.

TORONTO Goodwood FLASHES

Walter Davey
8 Stanton Ave
Toronto.

Mrs. Isaac Barkey and Mrs. Truman Grove, Ringwood, were entertained by Mrs. George Lee in the city recently.

We understand that George Bewell of Unionville is now visiting in Barrie and expects to be there for a time. Mrs. Bewell is a Goodwood lady.

George, Jack, Gordon Todd, Ed. Davis and Richard Rae were hunting last week back north in the Gooderham district. The weather was so bad that the deer just couldn't be shot, and the hunters came home empty-handed. They had a holiday just the same.

THROWS BOMB INTO PLOWING MATCHES

Straight Furrow no Aid to Soil Conservation, Members of Royal Canadian Institute are Told.

Scientific soil conservation has doubled and sometimes even tripled farm crop yields, thus aiding the war effort, H.H. Bennett, chief of the soil conservation service, United States department of agriculture, declared in Toronto Saturday night, when he spoke to the Royal Canadian Institute in Convocation Hall.

"The United States and Canada have produced the greatest crops in history to feed their armed forces, civilian workers and Allies in all parts of the world," Mr. Bennett declared.

"In the past we have been wasting our most vital assets," he declared. "Billions of tons of productive soil have been washed down rivers. It can never be reclaimed.

At plowing matches they give prizes for the straightest furrow. A straight furrow is the worst thing that can happen from a conservation standpoint. He organized plowing matches and gave prizes for crooked furrows around a slope."

He warned against burning stubble to ensure easier plowing. Decomposed vegetable oils help the land and stubble should be plowed under to act as a sort of a sponge to soak in the water and prevent wind from clearing off top soil.

"City people are awakening to the fact that you can't have an abundant country unless you have abundant farms. Our job is to conserve the bountiful soil we own," he concluded.

CANADAS HOLSTEIN TOPS BIG WISCONSIN SALE

Thirty-two Canadian Holsteins from five provinces sold for an average of \$733 at the Blue Ribbon Sale held November 9, at Waukesha, Wisconsin. The entire sale averaged \$718 for 64 head, the highest figure made by any Holstein consignment sale on the continent since 1929. Top price was \$2,300 paid for

WHY BRITAIN WANTS MORE LEAN BACON

If Britain wants more bacon, why not feed hogs to much heavier weights or up to 300 pounds or more? This is a question being commonly asked by many people throughout Canada, and it is a logical question, say officials of the Dominion Department of Agriculture.

The answer is that Britain wants lean bacon because, due to shipping space being limited, it is more economical to send lean meat than to send fat on the backs of hogs. It is a logical question, say officials of the Dominion Department of Agriculture.

The answer is that Britain wants lean bacon because, due to shipping space being limited, it is more economical to send lean meat than to send fat on the backs of hogs. It is cheaper to send fat in the form

MARMILL

Fattening Mash or Pellets

Analysis: Protein 14.5% Fat 3.5%, Fibre 7%

Here is an ideal ration for the fattening of cockerels, cull pullets and hens. It contains a variety of ingredients, carefully blended to not only produce fat, but also to build up the meat tissues, and distribute the fat evenly throughout the tissue.

Finish Stressed

Quality of finished product must be stressed. The birds must be properly finished to command the top prices, and it is profitable for the producers to see that the birds leaving their farms are of good quality. The market wants a well finished bird, of good type, with the proper amount of fleshing. In other words, it wants the best we can produce, and will pay good money for it.
