ing in the ration made up of pasture, hay and roots. This is where commercial feeds come into play-they balance up the home-grown rations.

There are several requirements of a ration for dairy.

cattle, namely, palatability, variety, digestibility, bal-

ance and bulk. A good feeder will take into account all

these factors when providing a ration for his herd.

Of these requirements, he is able to supply only a few

from his own farm. Most farms have pasture land for

pends on the size of the pasture land. Hay and roots

are fed, and these are usally grown on the farm. But

there are many important food elements that are lack-

their animals. The size of the dairy herd mainly de-
