MARMILL

Laying Meal Ex-Cello Laying Mash

Birds may lay well for a short time on an inferior ration, but for steady, high production over a long period, without moults, slumps or heavy mortality, something better is required. Actually it costs no more to feed a good ration than a poor one, because on the poor feed the pullets or hens eat more while producing less. Naturally a ration made up of selected ingredients, carefully balanced to contain the necessary proteins, minerals, vitamins and other materials in just the right proportion for highest results, cannot be prepared for the same price per hundred pounds as the inferior ration. Yet, measured in feed cost per dozen eggs, it is much cheaper. After all, it is your returns over your feed costs that make the profits.
