MARMILL LAYING MEAL

ANALYSIS: Protein 18% Fat 3.5% Fibre 6%

For the poultryman who is chiefly interested in egg production and wants more eggs at the season when the prices are best, Marmill Laying Meal C.L.O. is the standby of many years. It has been tried and tested in every way for profitable production and low mortality, and has more than proved its worth. More and more poultrymen pin their faith on Marmill Laying Meal C.L.O. all the time.

MANAGEMENT OF THE LAYING BIRDS

In the feeding of hens, if the mash portion of the ration has been correctly formulated so as to maintain the proper relationship between the proteins, stimulating egg production and the body maintenance proteins, the increased demands for heat and energy foods can be adequately taken care of, under normal egg production, by increasing the grain portion of the ration in step with the increased mash consumption.

You can safely maintain body weight of birds under increased egg production by increasing the amount of grain. Give the birds all the grain they will clean up in an hour as the evening feed, using the morning feed of Scratch or grain as a barometer, varying according to production, naturally increasing slightly as production rises.
