

**CLAIMS TITLE TO SHOOTING SEASONS LARGEST DEER**

According to the Lindsay Post a resident of that town, William O'Brien, lays claim to shooting the largest buck deer to come out of the northland this season.

While deer hunting alone in the bush north of Norland last week, Mr. O'Brien was beginning to think that all the bucks were in Buckland and not Norland and likewise the does, when suddenly his gloomy thought were broken by the sound of crashing brush and there within nice shooting range was the biggest buck deer he had ever set eyes on.

"Was he excited?" You bet he was, but Mr. O'Brien is not one to lose his head easily and he at once made up his mind that this fine specimen of a buck deer was going to be his. Getting a bead on the old boy he let go with two quick shots

one into his bow and one into his stern. The one into his bow entered just below his ear while the one into his stern nipped off his rudder and down he went.

After getting his carcass out to a set of scales, Mr. O'Brien dumped him on and found that he weighed 219 pounds. The average good-sized buck runs about 175 pounds, Mr. O'Brien said.

Now the claim of the Lindsay hunter is a bit confusing when we learn that John Zealous of St. Thomas shot a deer that tipped the scales at 260 pounds, and until we read of something better, the Zealous shooter simply is entitled to the honors of bringing down the largest. His deer was shot in the Golden Valley around Burks Falls.

Over 7,000 people read this paper every week.

**AUCTION SALE**

**CATTLE, HORSES, SWINE, GEESSE, PULLETS, HAY, CORN, IMPLEMENTS, etc.**

The undersigned has received instructions to sell by public auction at

LOT 35, CON. 7, PICKERING TWP. Mile north of No. 7 Highway, on Townline

**SATURDAY, DEC. 8**

1945, the following property belonging to

**THOS. W. POSTILL**

- Horses & Cattle**  
 Chestnut Mare, 7 years old  
 Bay Mare, 6 years old  
 Grey Mare, 13 years old  
 Bay Mare, 10 years old  
 Bay Mare, 14 years old  
 Ayrshire Cow, milking, bred Sept. 4  
 Ayrshire Cow, milking, bred Sept. 6

**UNSIGHTLY BRUSH SHOULD BE KILLED BY CHEMICAL SPRAY**

Willow, Chokecherries, Hawthorne, Dogwood and other similar shrubs are becoming far too common in pasture fields and along our fence lines and roadsides, says J. D. McLeod, Director of the Crops, Seeds and Weeds Branch, Ontario Department of Agriculture. These are objectionable, and should not be tolerated, because—

1. They are lowering the value of pasture lands.
2. They are unsightly to residents and tourists.
3. They harbour injurious insects and fungus diseases.
4. They cause snow to drift and thereby block roads.
5. They hinder moving and spraying of roadside weeds.

The majority of the brush shrubs referred to will never have any economic value and should therefore be eradicated. This is possible by spraying with a chemical weed killer with a sodium chlorate base at approximately two pounds per gallon of water. The chemical should be applied, during the growing season, under pressure until it is dripping off the leaves. A thorough soaking of the crown will ensure a more complete kill.

The cost of eradication can be lowered considerably by cutting down all tall growth during the fall and early winter months and spraying as directed the following year when growth is two to three feet high. Spraying bush over four feet high is not recommended. This work of cutting down growth to be sprayed next year should be undertaken now. Information in connection with the eradication of weeds and brush with chemical may be obtained by writing the Crops, Seeds and Weeds Branch, Parliament Buildings, Toronto.

**Big Amounts of Clothing and Food Donated**

(From the Kitchener Daily Record)  
 A check of district Mennonite relief authorities revealed today that Canadian Mennonites are not taking part in a recently-reported movement of livestock from the U.S. to re-establish herds in stricken Poland. That particular job, it was pointed out, is being done by the Brethren Service Committee across the border, although Mennonites are known to have contributed.

But the same check of Mennonite relief authorities here did disclose that the relief effort of Canadian Mennonites, a large percentage of whom are residents in Waterloo County, has almost doubled in Europe and Asia since the war ended.

**Tremendous Effort**  
 In fact, C. J. Rempel, manager of the Canadian Mennonite Central Committee, admitted that just prior to the war the Canadian Mennonite relief effort was "just an embryo compared to what it is now. The need is enormous, and everything within our power is being done to alleviate conditions wherever there is suffering and want."

The Mennonite Central Committee with headquarters in Kitchener, and Akron, Pennsylvania, now collects for and distributes relief food and clothing to 13 countries throughout the world. The group is represented by a total of 125 workers, compared with only 25 workers just before the war.

Next year will see the outstanding relief effort of the Mennonites when they will have nearly 250 workers in Europe, Asia and other fields, and when they expect to administer a Canadian relief program worth \$800,000, it was revealed today.

**Women Work Hard**  
 But actions speak louder than words, and that slogan may be said to be typical of the Mennonite. A Record reporter was asked—and by no means urged—if he would care to take a look at the Kitchener food and clothing depot, one of two in Canada where such contributions are received from Canadian Mennonites.

The reporter was taken down an alley to a building which appeared from the outside to be devoid of promise of any kind. But there was instantly a different picture inside, with Mennonite ladies in large numbers unpacking, sorting, cutting and mending a myriad of garments for the shivering millions of Europe. Boxes and bales of clothing were piled to the roof on either side of the building.

Then, out of the building with practically nothing said and the reporter found himself in the food section of the depot. Here Mennonite men were boxing tons of home-processed foods which were sent in by their people throughout this area.

**Splendid Response**  
 There is such a response that they are unable to handle it all at present and much is being held in reserve on the farms. It was explained that these shipments are sent in good lumber, as it is used by the people in Europe to make furniture. The foods sent from here include tremendous quantities of meat, processed vegetables and fruits.

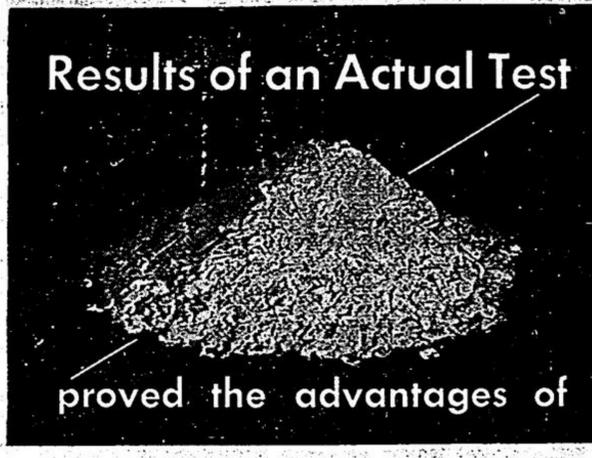

Mr. Rempel explained that the need of Holland is being stressed by the group at present, insofar as the effort in Europe is concerned, although all sections of Europe are being investigated for their needs and these are being met to the fullest extent of the committee's ability. Close to 50 tons of clothing have been sent by the U.S. and Canadian branches of the organization within only the past three months to Holland alone.

The Mennonite relief program in Holland is being set up to handle 225,000 quarts or more of home-processed food to be sent over from the Canadian Mennonites.

The need in Germany is also known to be "tremendous," but as a private relief organization the Mennonite group is not permitted to enter that country and distribute relief, it was pointed out.

The countries rendered vital relief by the organization, most of them "born" during or since the war years, are England, France, Holland, Switzerland, Egypt, Italy, Ethiopia, Belgium, India, China, Poland, Paraguay and Puerto Rico.

**TO HAVE BEAVER SEASON**  
 December 1, both days included. Those eligible to take beaver licenses—trappers, resident in Game and Fisheries that there will be an open season for trapping beaver in Sullivan and Bentinck Townships, from November 18 to each trapper or farmer.

**Results of an Actual Test**

proved the advantages of

**COARSE GRANULAR BIG 3 LAYING MASH**

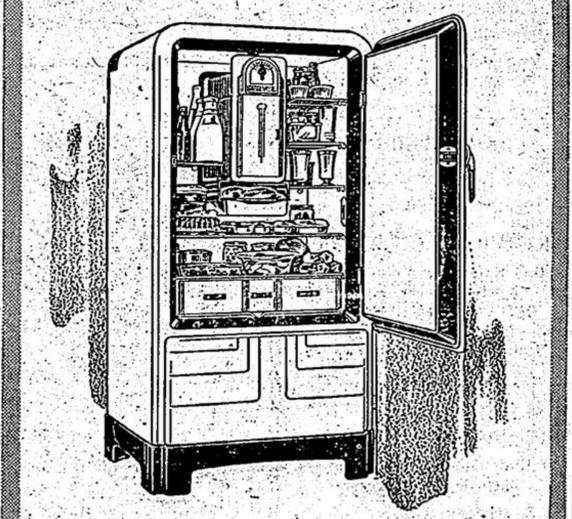

- were
1. More Palatable
  2. Greater Feed Consumption
  3. Increased Egg Production
  4. Less Deterioration in Feed Quality
  5. Lower Mortality

TESTS PROVED GREATER CONSUMPTION, HIGHER PRODUCTION—GREATER RETURNS

**Feeding the Dairy Herd**

**Marmill 24 Percent MILK MAKER**

A cow may be likened to a large manufacturing plant. Raw materials go in, and a finished product comes out. The raw materials that go into a cow are the feeds, while the finished products are milk and cream. But, as in a manufacturing plant, if the raw materials are of poor quality, or are not correctly mixed and put together properly, the product turned out is also of poor quality.

The majority of our dairymen are able to produce home-grown crops that have a definite place in the feeding of cattle. These crops are used and fulfil a purpose. But they are greatly improved by the addition of concentrates. These concentrates provide a great many of the food nutrients lacking in the home-grown crops. Moreover, the concentrates are balanced and draw their supply of food elements from a number of sources. That is one reason they are so valuable for feeding purposes.

In the offering to the Canadian dairyman the complete line of Marmill Dairy Concentrates, Supplements and Rations, the utmost care has been taken to provide a correct balance in the variety of essential food nutrients especially needed for production, reproduction and maintenance of body health. They are offered to you at prices more favourable than the cost at which you would be able to mix and feed home-grown rations of equal quality.
