

# Feeding Pullets with MARMILL GROWING MASH Saves Money

ANALYSIS: Protein 18%, Fat 3%, Fibre 7%

A growing mash plays an important part in the feeding of poultry. It is the connecting link between the feeding of a baby chick and a laying pullet, and, as such, must carry on from where the starter ration left off and fit the bird for the long, continuous high production in the fall and winter.

Marmill Growing Mash is the connecting link in many hundreds of farms. This mash, made up of only carefully chosen, high-quality ingredients, and manufactured and balanced to give the highest possible digestibility of ingredients, will give your pullets the strong, well-developed bodies and large frames necessary for pullets which are to start laying at six months of age and continue through the winter.

### LET'S NAIL DOWN THE NAILS

Neither the government nor the steel industry know who's getting a big "missing" percentage of today's record Canadian production of common building nails. At times you can't find a nail in Stouffville or Markham.

If leaves the construction industry questioning whether enough effort is being made to locate and stop this possible major leak in the supply pipe line serving essential construction. The average builder and contractor would like to see Ottawa trace a few actual large nail shipments with, if necessary, adequate RCMP assistance to WPTB and steel control enforcement investigators. One suggestion is that a lot of nails earmarked for

housing are finding devious ways into unauthorized export.

The call for nails for building across Canada, and especially in some of the larger cities—Montreal and Toronto, for example—in recent weeks has taken on an unguished note. True, construction demands are excessive. But production was never higher, recently reached 105,000 kegs a month or 1,260,000 a year; and 5 kegs will build a house, 30 kegs a block of stores or small factory. Authorized exports have seldom in peacetime been smaller. Are unauthorized exports growing?

Recent newspaper interviewers have found Ottawa officials "suspicious" but rather uncertain about transborder nail smuggling to meet large-scale demand at anything up

to \$50 a keg, or more than ten times the legitimate Canadian price. Canadian black market quotations reportedly run from \$15 to \$24 a keg.

### SELDOM SEEN

"The farmers are the backbone of the nation." City people who take the time to think about where they get their food say that often enough, but that's only saying what the farmers have done for them; there's one part of the picture they've left out—what they're not doing for the farmers. The cost of living has gone up, but the increase in products coming from the farm has been far below the increase in other products. City people will pay higher prices for their luxuries, taking the increase in price for granted, but if they have to pay more for necessities, perversely enough, they'll complain.

I'm not saying all this is due to city people's cussedness; it's probably due to their ignorance of the scenes behind the food on their table. City people can strike for higher pay and a forty hour week, but can you imagine a farmer quitting work for the week because his forty hours are up?

In any case, even if city people were better informed about farm life, there wouldn't be much they could do to help us—except, perhaps, to roll up their sleeves and relieve the shortage of farm help. Actually, there's only one body of men that can help us directly, and that is—the Government. And the Government has to be made to realize our needs, what they are, and their importance. It would take a farmer to see that this was accomplished. That's why we could use fellow farmers in parliament, and why the coming elections will have us farmers on our toes rooting for Whitechurch's Earl Toole to represent us in the House of Commons. Here's hoping.....

OLD JOSH

### AUCTION SALE HOUSEHOLD FURNITURE Dishes, Bedding, Garden Tools, etc. The undersigned has received instructions to sell by public auction at GOODWOOD

### SATURDAY, JUNE 22 1946, the following property belonging to the estate of the LATE THOS. BASTON

### HOW TO FREEZE PEAS AND STRAWBERRIES

"It's June in January," might well be the theme song of homemakers who have access to cold storage locker plants or home freezing units and freeze their own garden fresh vegetables and fruits. Being able to bring summer flavour and variety to winter menus more than compensates for the small effort expended in preparing and freezing food.

The newly revised bulletin, FREEZING FRUITS AND VEGETABLES, published by the Dominion Department of Agriculture, contains the latest information on what and how to freeze. Directions are simple and specific, and will give excellent results to the homemaker freezing food for the first time, as well as to more experienced hands at this method of food preservation.

Printed below are directions for freezing peas and strawberries. These products may not be at their peak in many sections of the country yet, but the directions may be followed until a copy of the bulletin is received.

Containers for packing vegetables and fruits for freezing, may include heavily waxed cylindrical cartons with slip-over or slip-in lids, oblong cartons with bag liners, honey or jam tins (except for rhubarb) or glass sealers, particularly those with wide mouths.

In freezing, selection of vegetables and fruits is most important. Only the highest quality, picked at the right stage of maturity, that is, those at the perfect stage for table use, should be chosen. Variety is also important, as all varieties of every vegetable or fruit do not give equally good results.

### FREEZING PEAS

Select peas which are garden fresh. Harvest early in the morning choosing only tender, young peas. Shell directly into cold water, discarding overlarge or hard peas. Wash and drain. Blanch peas three minutes (blanching is really pre-cooking) by placing vegetables in a piece of cheesecloth, or wire basket, (with a lid to keep vegetables from floating), and plunging into rapidly boiling water. Count blanching time from the moment water returns to boiling point. To speed the operations use two kettles, having at least two gallons of rapidly boiling water in each. Blanch about one pound of vegetables at a time. Place vegetable in first kettle for thirty seconds only, to heat through, then transfer at once to second kettle. Time blanching from the moment the water returns to the boiling point.

Chill peas rapidly by plunging into ice water, or cold running

water, then drain. Pack in containers using the dry or wet pack.

For the dry pack, fill the containers with drained peas, leaving half an inch head space, to allow for expansion during freezing. Place lid on container and label clearly.

### FREEZING STRAWBERRIES

Choose firm, fully ripe berries. Wash, sort, hull. Slice or leave whole, pack in containers using the dry or wet pack.

For dry pack allow one pound (cups) sugar for each four pounds (about 12 cups) prepared strawberries. Sift the sugar over the berries in alternate layers in containers, or mix sugar and berries in a bowl, stirring and crushing slightly. Let stand until sugar is dissolved

### IN BUSINESS 130 YEARS

F. W. Read and Sons sold their store business in Bobcaygeon last week. The concern had been in the family there for 130 years, quite a record anywhere in Ontario.

Attend the flower show next Tuesday evening.

## Ready AND ABLE FOR THE BIG TASK AHEAD

With silent yet perceptible determination and an awareness of the urgency of the great need for foodstuffs, the Canadian farmer has accepted the responsibility which is his to maintain and increase the output of farm products so important in our national economy and so essential to relieve the critical shortage in world supplies.

Provided, as he now is, with purpose nobler than self-interest, he sets himself to the task with loftier ambition and renewed energy. Eager he is for that conscious recognition within himself of having a definite and necessary part in the national welfare in its domestic and export activities. Zealous is he that his contribution may be worthy and adequate.

By his side, ever ready to help make more effective the farmer's effort is the Canadian implement maker whose co-operation in furnishing the most efficient machines enables him to multiply his output and extend his activities so that today he produces more with less manpower and in the most economical manner yet attained.

Never were the opportunities in agriculture more promising—never was the Canadian farmer better fitted or better equipped to make the most of those opportunities. In the future, as in the past Massey-Harris will endeavour to develop, supply and service equipment that will make it easier for the farmer to fulfill his plans and aspirations.
