SMALLER EARNER PAYS BIGGEST SHARE

Income tax falls heavy on the smaller income earners, is proven by a statement just issued by Ottawa.

A total of 1,314,050 of the 2,545,809 persons who paid income tax

in 1945-46 had annual incomes of between \$,1000 and \$2,000, it was disclosed by the Revenue Department.

Send The Tribune to absent friends.

Stouffville bread
is good bread!

Whether it's in the restaurant or in your own kitchen, Stouffville Bakery bread has proven itself tops. Any household chef can tell you that it's pure wholesome ingredients give it a flavour and texture that make it a favourite. Now when prices are high, let's get the most for our money. Let's buy bread made in the Stouffville Bakery.

TURNIP GROWERS AND GOVERNMENT OFFICIALS EXAMINE DEMONSTRATION PLOTS

A series of investigation and demonstration plots were arranged in the spring by the Turnip Committee of the Ontario Crop Improvement Association in co-operation with officials of the Dominion and Provincial Departments of Agriculture. These were laid down in the chief turnip growing area extending from Kincardine in Bruce County to Uxbridge in Ontario County. A tour of these plots was made on September 18 and 19 with a committee.

There were variety tests with different rates of fertilizer and also to show the difference between the several varieties on sod versus stubble on the farm of Stanley Ward, Uxbridge, who has 12 acres of turnips in a block and the plots are supervised by R. E. Goodin, of Toronto. On the farm of Morris Tolton, of Bruce County, under the supervision of W. F. Strong, Guelph, the demonstration plots were laid out to determine results from distances apart of plants in the row, ranging from 4 to 8 inches. Tests are also made with different rates of commercial fertilizers vs. manure only. Similar demonstration plots were laid out on the farm of John Shearer, of Bright. Plots were also seen at O.A.C. and in the Rockwood district.

Some 25 growers and officials met at the farm of Bruce Tuckey, in Huron County, to examine plots supervised by J. J. Johnson, of London. There were plots where 400 lbs. of 2-12-6 fertilizer were applied per acre with no manure; another set of plots with 800 lbs. of 0-14-7 per acre and another set with 12 tons of manure and no fertilizer. In another part of the field 400 lbs. of salt were applied with adjoining half-acre on which no salt was applied. Observation did not reveal any very marked difference in the size of uniformity of the crop. Later in the season weights will be taken and quality tests made of turnips grown on different plots in order that definite results may be ascertained. The field was dusted for water core, using a prepared borax dust mixture.

Black rot was present in a portion of the field. This is a soil-borne disease and treating the seed with Semesan is the remedy. Mr. Tuckey grows a large acreage of turnips and some sugar beets. He feeds the tops, putting the manure back on the land. This has tended to aggravate the trouble. This year the disease has caused Mr. Tuckey considerable loss. However, he had already shipped four carloads of turnips, of 600 bushels each, off of 4 acres and the price was 50 cents a bushel.

The group visited the turnip grading and waxing plant of the Canada Packers in Exeter where turnips are graded and bagged for shipment, the farmers taking the culls home. The waxing plant was not in operation but there is complete equipment for sorting, grading, washing, drying, waxing and bagging the turnips. The Exeter Rutabagas Company plant in Exeter was also visited where turnips are waxed and shipped. In this plant the turnips are washed before being trimmed and then go through a forced air drier before entering the waxing vat. By this method the air of the building is really conditioned and a high humidity does not interfere with the waxing.

Two Thousand Tailors Coming to Canada

John Monkhouse Should be on the Reception Committee

Nobody is learning the tailoring trade, and this situation has been going on for some years. Result, there are not enough tailors in Canada to meet the demand for needle pushers. A similar condition could be pointed out in many other trades, including the printing trade. Consequently, it is not surprising that a move is being made to import journeymen from foreign countries.

Right now Canada is about to admit 2,000 skilled tailors from displaced devastated places in Europe. This plan is really getting into high gear, and we respectfully suggest that the veteran John Monkhouse of Stouffville, one of the oldest tailors in active business, should be placed on the reception committee.

The plan has the official blessing of the clothing industry, the federal Government, the Amalgamated Workers Clothing Union and unions representing the ladies' cloak and suit industry.

Trade and union representatives have reached England on their way to the European camps, to conduct work qualification tests. Canadian immigration officials will screen prospective workers. A number will be flown to this country, and it is anticipated now that all will be here by the end of the year.

The plan, fostered by the National Council of Clothing Manufacturers of Canada, is designed to meet a growing need in the clothing industry, particularly for hand tailors as distinct from machine tailors. Tailors are badly needed for alternations at retail outlets, a clothing official reports.

Manufacturers desiring foreign workers have been required to sign contracts guaranteeing continuous employment for a year, also guaranteeing pay at the established local rate. Manufacturers are said responsible in part for the worker's welfare during the first year that they are in Canada.

The immigrants will be distributed across Canada, Montreal, Toronto, Winnipeg and the west coast all being allocated the number they require. Federal authorities stipulate that not more than 50% of the immigrants shall be of any one religion.

Max E. Enken, Toronto, is chairman of the Joint Industries Delegation now on its way to Europe. David Solomon represents the manufacturers' council of ladies' cloak and suit industries; Sam Posluns the Toronto Cloak Manufacturers' Association; Bernard Shane the Union in the ladies' cloak and suit industries in the Quebec market, and Samuel Herbst the union in the Winnipeg market.

Had Darning Needle in Leg for Years, Didn't Know It

A Belleville, Ontario woman, nearing the century mark, found out the other day that she had been walking around for years with a three inch darning needle in her leg.

She didn't know it was there until recently, and she hasn't any idea how and when it got there. She hasn't done any sewing for ten years, though she did a lot in her youth.

The elderly woman is ninety-six year old Mrs. Mary Louisa Crosby. She lives in Belleville with her daughter, Mrs. Mayme Brown. Mrs. Crosby felt a pain in her leg recently and was bundled off to hospital. An X-ray was taken and a three inch darning needle was revealed.

The 96-year-old woman had an operation on her leg and now she is fully recovered. Her only comment on the matter is, "The needle must have been there a good many years."

Nineteen Showed Evidence of T.B. in Markham Survey

The recent T.B. survey carried on in Stouffville results of which were recently published, and now followed by results of that area of the county to the south of Stouffville that was sponsored by Markham-Unionville Lions Club.

In the recent Markham-Unionville Survey 19 persons were found to show x-ray evidence of tuberculosis of the lungs. Clinical examinations of that number revealed that 7 were presently active; 2 were possibly active, requiring early re-examination; while so far 3 are

definitely active requiring admission to sanatorium. A further 14 showed presumptive evidence of tuberculosis and 7 others require further examinations. The contacts of those with active or possibly active tuberculosis are being examined, if not x-rayed in the survey, to find possible sources of infection.

In addition to the discovery of those having tuberculosis of the lungs, 34 persons were found to have non-tuberculous diseases of the lungs. A number of others (approximately 27) were found to have less significant abnormalities, such as previous pleurisy, or slight calcification in the lungs.
