Hello Homemakers! Electricity in the home contributes to brighter, happier living. However, we are now going into the period when the end of daylight saving time and the approach of "shorter" days call for the careful use and the wise management of electrical home appliances, so that sufficient power will be available to supply all essential needs.

Hydro is building many new power plants but it has been more difficult to obtain necessary materials than you can imagine. For instance, their building job needs not just a few nails—but kegs and kegs of them. Power site construction jobs often require 2,000 pounds of nails daily, not to mention cement, steel and wire. New construction takes time, but meanwhile we must do our share to make electricity continuously available. Use it sparingly before meal hours—the period when the strain on the machines is the greatest.

To help in maintaining our economical Hydro service which is hard-pressed at this time, we list the following things you can do.

- To Conserve Electricity
1. Do not leave lights on in rooms not in use.
 2. Keep light bulbs and reflectors clean.
 3. Place lamps to best advantage for eye comfort.
 4. Do not use coloured light bulbs—dark colours absorb light.
 5. Use white lamp shades to reflect as much light as possible.
 6. Turn all units on range to low or off when food begins to steam.
 7. Make use of all stored heat in surface elements; e.g., heating water.
 8. Cook as many foods as possible in oven at one time.
 9. Use flat bottomed tight-covered utensils that fit the element.
 10. Use small quantities of water for cooking and cook with pressure cooker often.
 11. Do not use your electric range

to heat your kitchen.
12. Defrost your refrigerator regularly—once a week.

13. Do not open refrigerator door more than necessary.

14. Do not waste hot water if you have an electric water heater.

15. Do not run your washing machine too long—not over 12 minutes per wash.

16. Do not dampen clothes too much for ironing.

17. Do not operate radio unless you are listening.

18. Do not leave appliances "on" when not in use.

UNDER WATER 31 YEARS PEN GOOD AS EVER

Albany, N.Y., Oct. 6—Walter B. Kirk of Albany insists those new fountain pens that write under water don't have a thing on his old-time pen which was immersed for 31 years.

Kirk dropped the pen into a well in 1916. When the well was cleaned recently, the pen was found.

Kirk says it "writes better today" than any he has had since.

JEALOUS WIFE SLUGGED HUSBY WHEN "OTHER WOMAN" WAS ONLY HIS SISTER

Evidence taken at divorce hearings is not often published although there is no bar to such publication. No doubt many on unsavory case is thereby kept more or less secret, and many an incident related in the divorce court would make a horse laugh.

Last week when one of these cases came before a Toronto court, the husband asked for protection from his wife, while she was asking for separation by way of divorce. Said hubby: "She is so jealous she makes my life unhappy and I hate to enter my home. As evidence of this jealousy, he related how last summer while camping at Musselman's Lake, his wife came out from the city unexpectedly. It so happen-

ed that hubby's sister had arrived during the week, and he had taken her to Stouffville to show her the town. They returned after attending the theatre. Not knowing his wife was at the cottage, he stepped on the porch, and from the darkness received a slug on the head with a heavy object. His sister screamed, and she got one too. Then the light was turned on, and the jealous wife admitted she thought her husband was bringing home another woman, and she made the unexpected visit to the summer home just to catch him. When she heard the couple coming along the beach talking, she said to herself: "I knew it, I knew it." The Judge said he was sorry that he could do nothing with the jealous woman, certainly he could not give a divorce, he remarked with a degree of sympathy.
