

## CHRISTADELPHIANS

The Divine plan of Partitioning Palestine.

The Prophet Zechariah Ch. 12:3 aptly describes Jerusalem as "A Burdensome Stone for all People," prior to Christ's Second Coming—Ch. 14—to establish the Kingdom on earth for which He taught us to pray. Thus the Palestine problem is a major one for the United Nations.

Ezekiel 48 outlines God's plan to divide the Holy Land when at long last there is "Peace on Earth" because all mankind learns to give. Glory to God v. 21, 22 mention the specific portion for Jesus, the Prince. Zech. 2:12 Testifies "The Lord shall inherit Judah, His portion in the Holy Land and shall choose Jerusalem again." The re-gathering of the 12 Tribes is prophesied. To this end Jer. 16: 15; 31:31-34; Heb. 8: 8-10; Dan. 12:1; Rom. 11: 2, 15; Mt. 4:7, Luke 1:71, 2:34; Joel 2:32; Deut. 4: 30,31.

## Farm Fires Cause Annual Damage Of Over Ten Million

It is estimated from a recent survey made by the Dominion Bureau of Statistics that there were 8,000 farm fires in Canada in the 12-month period ended June 1, 1947. It is difficult to obtain adequate representation of farm fires, because if a fire is sufficiently serious to destroy the farm residence and is not rebuilt, there is little possibility of collecting information about the fire from a sample survey of households. However, even with this probability of under-estimating, the results of the survey indicate that farm fires occur with considerable frequency and cause enormous property damage. The estimated value of farm property destroyed by fire in period under review amounted to \$10,254,000 and the amount of loss covered by insurance was estimated at \$3,778,000, just under 37 per cent. This indicates that a relatively small proportion of farm property is adequately insured against fires.

Fires were most frequent in barns or outbuildings and 45 per cent of all fires originated in these places. The farm house was the location of 38 per cent, and 15 per cent were stubble, bush or grass fires. The remaining 2 per cent of the fires concerned machinery and equipment. In addition to buildings, including the farm home, it is estimated that farm equipment was lost or destroyed in 16 per cent of the fires and equipment and live stock in 15 per cent.

The frequency of farm fires shows considerable seasonal variation, the late spring and summer being the season in which fires are most common. Nearly half of all farm fires occur in the four months of May to August.

Canadian farms for the 12 months ended June 1, 1947.

It is estimated that there were 37,200 accidents on farm homes, and 30,000 of these were to men. The most frequent injury arose from falls, and the most frequent reason was the existence of open trap-doors and inadequately protected stairs. Injury from falls was more of a hazard to young and old persons than to those in intermediate age groups. On the other hand, injury from cutting and piercing tools and from crushing, which were almost as frequent as injuries from falls, occurred most often among persons between 20 to 44 years of age.

Miscellaneous accidents totalled 10,000 and a frequent cause was injury from horses. Backfiring of tractors and other engines, automobile accidents, and poisonous gas, also figured among the miscellaneous causes.

Accidents were most frequent in fields and woodlots where nearly 60 per cent occurred. Barns and outbuildings were the next most common place of accident, followed by accidents off the farm, and lastly by injuries sustained in the farm house. Though accidents which occur off the farm may not be considered to be farm accidents in a strict sense, they are so closely

associated with rural life that they cannot be excluded. Accidents in this class include automobile accidents, falls from horses and bicycles, runaway teams and falls
