Potato Growers!

CONTROL INSECTS AND DISEASE WITH C-I-L POTATO PESTICIDES

C-I-L Potato Sprays and Dusts assure dependable low-cost protection against destructive insects, blights, other fungous diseases.

C-I-L POTATO DUSTS
DEETROX. Contains 3% DDT and 7% copper, with special carrier-sticker. Highly effective against early and late blight, leafhoppers and beetles.
DEETROX 5-7. Contains 5% DDT and 7% copper. Specially prepared for control of blight and insects on seed-potato crops, or when aphid infestation is severe.
TROX. A 7% dust derived from fixed copper. Gives effective control of blight and other fungous diseases.
These dusts may be applied at any time (except during wind and rain). They do not depend upon dew for their action.

C-I-L POTATO SPRAYS
DEENATE 50-W. The 50% ultra-micron DDT insecticide. Recommended for control of leafhoppers, flea beetles, Colorado potato beetles, and many other insects infesting orchards and certain truck crops. Widely used as a barn and livestock spray.
DEECOP. Contains DDT and fixed copper. Like Deetrox, it controls blight and destructive insects, and is specially prepared for growers who prefer to spray rather than dust.

For Early and Late Blight
PERENOX. A highly concentrated fungicidal powder which contains 50% copper.
TRI-COP. Tri-Basic Copper Sulphate, containing 52% copper. By adding Deenate 50-W, it can be used as combined fungicide-insecticide.

All C-I-L Potato Spray materials come ready to use. Just mix with water. They will not clog nozzles.
